### Edge Series USB Microscope Camera with Polarizer

# **AM4115ZT**

#### **Product Overview**

The AM4115ZT Dino-Lite Edge delivers higher image quality with a state-of-the-art lens design, providing matchless image quality with stunning sharpness, less aberration, and less vignetting throughout the whole magnification range which is apparent in the whole Dino-Lite Edge Series.

The freely adjustable polarizer helps to reveal more detail or to enhance the contrast on the surface by reducing or eliminating the reflections. This model also includes the adaptable cap design, which is a detachable and interchangeable front cap design used in the Dino-Lite Edge series aimed at satisfying various applications. Different caps have been developed for better adaptability for more applications. Simply removing the cap would yield more working distance which brings added convenience in the higher magnification range, or have better accessibility to the full range of magnification.
