

Aerospace Sealant Scraper

Metcal plastic adhesive tools are ideal for smoothing sealants and adhesives for many Aerospace applications. With the sealant scrapers manufactured from Celcon[®], and spatulas from glass filled Nylon, these unique tools guarantee not to damage delicate substrates found in the Aerospace industry.

Sealant Scraper

The Celcon[®] scraper has a convenient 0.75" (19mm) working area and is used to scrape sealant off areas requiring rework or tidy-up. Such areas include the exterior pressurized fuselage skin: Lap Joints, Butt Joints, All other areas (i.e. antenna cutouts, wing to body fairings, around window forgings, etc). For user comfort, the scraper side edges have been smoothed off. A hanging-hole, at the handle end, ensures the scraper can be stored away when not in use.
