SUCO Robert Scheuffele GmbH & Co. KG

A pressure monitoring specialist setting standards on the global stage

SUCO Robert Scheuffele GmbH & Co. KG was founded in 1938 and has established itself across the globe under the trade name SUCO. The two main product groups, pressure monitoring (mechanical pressure switches, vacuum switches, electronic pressure switches and pressure transmitters) and transmission technology (centrifugal clutches and brakes, electromagnetic clutches and brakes), as well as descent devices with centrifugal technology, are developed, designed and manufactured at the Bietigheim-Bissingen site, approximately 20 km north of Stuttgart in Germany.

Peter Stabel, Director

Marcell Kempf, Director

Highest quality in all areas

The development and continual expansion of the company premises are indications of a thriving company.

Work on global presence has been rigorous, and today SUCO is actively represented by distribution companies in France (SUCO VSE France – a 50/50 joint venture with VSE Volumentechnik GmbH) and in the USA (SUCO Technologies Inc.), by associate company ESI Technology Ltd in Wrexham, North Wales, and by more than 40 mostly exclusive sales partners in over 50 countries.

Certified to DIN EN ISO 9001:2008, SUCO has retained its consistently high quality standards for many years, something substantiated by numerous audits by reputable companies from a broad diversity of industry sectors.

This worldwide acknowledged product quality is guaranteed with CNC-controlled machining centres, automated assembly machines, sophisticated test systems and the latest in measuring equipment. Outstanding products, high level of customer service and excellent price/performance ratio guarantee SUCO good market positioning within the product sectors mentioned.

A sophisticated level of personnel qualification, a high identification of the employees with the company, process-oriented structures and efficient organisation are guarantees for continued company growth into the future.

Observance of ethical principles and comprehensive environmental awareness are standard at SUCO, and guarantee business relationships on the highest level for our customers the world over.

This catalogue does not only give a clear and structured overview of our capabilities all around our comprehensive range of pressure monitoring products but also offers detailed technical explanations supporting you in many challenges occurring in your specific applications.

Please trust in a company with over 75 years of experience.

SUCO – A success story

From a mechanical workshop to an industrial company operating on the global stage

1938

Tradition and Innovation

The preservation of proven traditions and continuousz efforts in innovation enable visions to become successful reality

Design and development of new products using the latest CAD tools.

Products are subjected to comprehensive testing and measurements to simulate realistic ambient conditions and loads.

Assembly and test of pressure switches on semi and fully automated installations.

Fully automated switching point adjustment with computer-aided documentation of readings.

Ultra-modern production facilities with integrated, fully automated component handling for high efficiency.

Encapsulating system for custom ready-wired pressure switches for strictest requirements of IP protection class.

State of the art measuring and test methods for assembly and alignment of our electronic products.

Product final inspection with ultra-modern computer-aided test systems.

General technical explanations

User information

Our pressure monitoring products may only be installed and started up by authorised specialists. The safety regulations of country-specific authorities must be observed, especially when working with mains voltages and oxygen, and in potentially explosive areas.

Product information

The technical information in this catalogue is based upon fundamental testing during product development and empirical values. The information cannot be used for all application scenarios.

Testing of the suitability of our products for a specific application (such as the checking of material compatibilities) remains the responsibility of the user. It may be the case that suitability can only be verified by appropriate field testing.

IP protection class

The IP protection class is a defined protection level code (sealing) of electrical equipment housings in line with IEC 60529 (formerly DIN 40050 – Part 2). Protection of a housing against the following is tested here:

- The penetration of solid extraneous particles, such as dust
- Access of hazardous parts
- Penetration of water

IP protection tests are performed as type tests. The IP protection type code, made up of two digits, specifies the protection of a housing against the penetration of solid extraneous particles and water. The numeric code therefore provides conclusions to be drawn on the level of personal safety as well as the functional protection / mid to long-term functional reliability of electrical equipment.

Protection types IP00, IP65, IP67 and IP6K9K

IP00:

No protection against penetration of solid particles or water, no protection against contact.

IP6X:

Protection against penetration of dust (dust proof). Full contact protection.

IPX5:

A jet of water from a nozzle, aimed at equipment (such as a pressure switch) from all directions, must not have any harmful effect.

IPX7:

Protection from water, when equipment (such as a pressure switch) is immersed in water under defined pressure and time conditions. Water must not penetrate into the equipment in harmful quantities.

IP6K9K:

Devices satisfying these requirements must be dust-proof and be able to withstand loads during the use of high-pressure cleaners and steam jets. The standard stipulates a water pressure from 80 to 100 bar at a temperature of 80°C for testing.

IP6KX:

Dust must not penetrate. Letter K: Specific to the electrical equipment of road vehicles.

IPX9K:

Protection against penetration of water at high pressure / for steam jet cleaning. Water aimed at the housing from every direction at greatly increased pressure may not have any damaging effects.

We are able to offer IP67 / IP6K9K for many of our mechanical and electronic pressure switches (pre-wired or with integrated connector) and for our transmitters.

IP67 / IP6K9K is the recommended protection for mobile hydraulics and any equipment exposed to the outdoor environment.

Cylindrical threads

Cylindrical threads are either sealed on the front by underlaying an appropriate sealing ring (such as a copper sealing ring) or by already having integrated O-rings or gaskets.

Conical threads

(cone-shaped threads)

Conical threads guarantee tolerance compensation of the two threaded parts. The sealing function is realised with thread flanks which deform permanently and enter into a metallic frictional fit. Conical threads are not screwed in down to the screw-in depth, but fixed with the tightening torque required for the leak tightness. Remember not to exceed the permitted tightening torque of the pressure switch or transmitter presented in the following table (to prevent damaging the threaded pin beforehand, causing it to become untight during operation or to snap off when tightened).

Tightening torques of steel threads

The specifications below are to be understood upper material thresholds for the housing of pressure switches or transmitters. Remember during installation that the type and material of the seal, the condition of mating surfaces (e.g. dry or oily) and the material of the counter-piece all have a bearing on the tightening torque.

Thread	Tightening torque
NPT 1/8; M 10 x 1 conical	max. 18 Nm
M 10 x 1 cyl.; G 1/8	max. 20 Nm
M 12 x 1.5; 7/16 – 20 UNF	max. 30 Nm
G 1/4; 9/16 – 18 UNF	max. 40 Nm
NPT 1/4; M 14 x 1.5	max. 40 Nm

Brass housing

Values 30% lower than in the table above must be used for brass housings.

Gaseous applications

Using additional sealant to attain the required leak tightness may be necessary for gas applications.

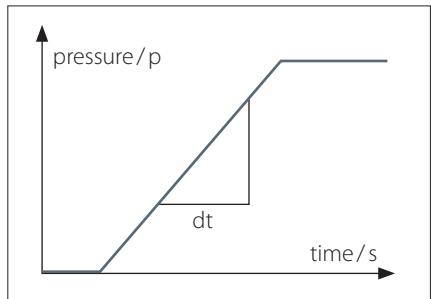

Vacuum

The values given in the technical details for the vacuum range are specified in millibars (mbar) below atmospheric pressure.

Pressure change rate (~rise / ~fall)

The pressure change rate denotes the pressure over time for the rising/falling pressure. The pressure change rate is specified in bar/s or bar/ms.

The maximum pressure change rate for SUCO mechanical pressure switches is 1 bar/ms (1,000 bar/s). For SUCO electronic pressure monitoring products the maximum pressure change rate can be up to 5 bar/ms (5,000 bar/s).

Over pressure protection

The specified over pressure protection in the catalogue is based on a static pressure. The values refer to the hydraulic or pneumatic part of the switch.

It is best practice to use 30 - 50% lower values for dynamic pressure compared to static pressure. These empirical values are based on the knowledge that, in pressure systems, unexpected pressure peaks which are higher than the working pressure are generated as a result of activation of valves, sudden falling or rising load or simply the change of cross-sections in the pipes. With conventional measurement techniques (such as manometers), these pressure peaks are hardly measurable. Faster measurement systems must therefore be used for this data acquisition. Attempts are being made to take this into account by using empirical or corrective factors.

If the pressure conditions are known and the pressure change rates are ≤ 0.1 bar/ms, our pressure switches and transmitters can be used up to the permitted overpressure protection as per data sheet / catalogue. Only 50 % of the specified overpressure protection is permitted when operating at the maximum permitted pressure change rate of ≤ 1 bar/ms for mechanical pressure switches, and at ≤ 5 bar/ms for transmitters.

RoHS-Compliance

RoHS

= **R**estriction of **H**azardous **S**ubstances
(EC Directive 2011/65/EU (RoHS II))

CE mark

European Parliament and Council directives must be observed when products are launched onto the market. If a directive exists for a product, it must be applied. Only products for which a directive exists may bear the CE mark.

Mechanical pressure switches with a supply voltage above 50 VAC or 75 VDC are covered by the 2014/35/EU Low Voltage Directive. Variants for potentially explosive areas are covered in addition by the 2014/34/EU ATEX Product Directive.

Our electronic products satisfy EMC (Electro-magnetic Compatibility) Directive 2014/30/EC.

Mechanical pressure switches do not fall under the EMC Directive.

The Machinery Directive 2006/42/EC is not applicable, because our products are classed as components.

Our product designs are based upon "good engineering practise" in line with Article 4, Paragraph 3 of the Pressure Equipment Directive (2014/68/EU), meaning neither a declaration of conformity may be issued nor a CE mark affixed.

The current product-specific CE declaration is available for download from the download area on our homepage:
www.suco.de/Downloads.htm

Technical explanations for mechanical pressure switches

Diaphragm pressure switch

NO

What is a mechanical pressure switch?

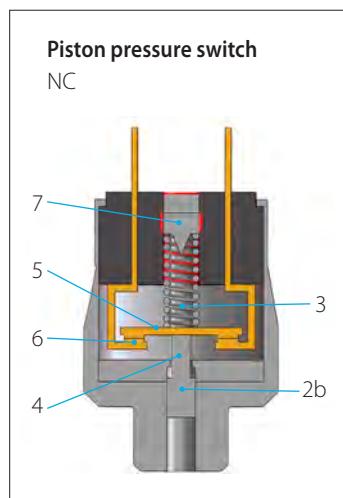

Mechanical pressure switches from SUCO monitor the pressure of liquid or gaseous media, and close or open an electrical circuit on reaching a set threshold.

Diaphragm pressure switches

SUCO diaphragm pressure switches are used in pressure ranges from 0.1 bar to 100 bar, meaning over pressure safety of 35, 100, 300 and 600 bar, depending on the used diaphragm type.

Piston pressure switches

Pressure ranges from 10 bar to 400 bar can be monitored with SUCO piston pressure switches (dependent on size); an over pressure safety of up to 600 bar can be attained.

Piston pressure switch

NC

Sizes of pressure switches

Mechanical pressure switches from SUCO can be divided into sizes hex 24, hex 27 and 30 A/F. Each particular size has specific hydraulic, pneumatic and electric properties (specified on the relevant catalogue page in the technical details).

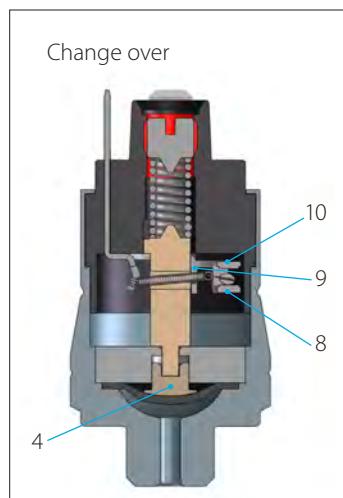

How does a pressure switch work?

Function description for **normally open (NO)**:

Pressure is applied to the diaphragm (2a) / pistons (2b) through the pressure connector (1). If the generated pressure force is greater than the pre-tensioned force of the pressure spring (3), the plunger (4) moves towards the counter-contact (6), carrying along the contact disc (5), and closes the circuit. The switch opens again when the pressure is reduced by the hysteresis value.

Function description for **normally closed (NC)**:

Engaging happens in the reverse order.

Change over

The adjustment screw (7) enables the switching point to be changed within the adjustment range.

The micro switch of a **change-over contact system (snap-action)** offers both, a NC and a NO contact.

The swivel contact (9) is activated by the plunger (4). The circuit is closed by the NC (8) as long as no pressure is applied. When the applied pressure exceeds the set switching point, the swivel contact changes over and closes the circuit via the NO (10).

Utilisation category

The utilisation category specifies for example voltages and currents, and the type of load, our pressure switches are designed for (to DIN EN 60947-5-1).

AC voltage

AC12: Control of ohmic loads and semiconductor loads in input circuits of optocouplers (such as PLC inputs).

AC14: Control of electromagnetic loads, 72 VA.

DC voltage

DC12: Control of ohmic loads and semiconductor loads in input circuits of optocouplers (such as PLC inputs).

DC13: Control of electromagnets.

Classification of electrical switch functions

			Contact form DIN- EN-60947-5-1	Symbol IEC 60617
NO	NO, normally open	SPST single pole, single throw	X	
NC	NC, normally closed	SPST single pole, single throw	Y	
Change-over contacts	CO, change over (snap action)	SPDT Single pole, double throw	C	

B10d value

The B10d value specifies the anticipated service life (with a 10% probability of failure). The B10d value is therefore directly dependent on the respective application of the pressure switch. For ohmic loads and currents < 1 A, we specify the B10d value as 1 million cycles of electrical life.

The specification of a MTTF time (mean time to failure) is not possible without knowing the specific conditions in the application. However, the MTTF time can be determined easily from the B10d value:

$$MTTF_d = \frac{B_{10d}}{0,1 n_{op}}$$

n_{op} : number of cycles per year

B_{10d} : number of cycles until 10% of components have failed.

Minimum current / minimum working voltage

The minimum working current and minimum working voltage depend greatly on operating and ambient conditions.

Physically, the build-up of impurity layers on the contact rivets must be countered with mechanical friction and/or electrical erosion. It has proven useful in many applications to deploy our pressure switches with silver contact rivets ensuring that they are fail safe to 10 mA and 10 V. Variants with gold contacts are available in our catalogue for even lower currents and voltages.

Potential-free – galvanically isolated

Mechanical pressure switches from SUCO are potential-free, i.e. no auxiliary energy is required. Also, there is no electrical contact between the individual, live parts and the housing.

Adjustment range of switching point

The pressure range, within which the switching point of a pressure switch can be set, is called adjustment range. The switching point corresponds to the pressure value at which the electric circuit is opened or closed by the pressure applied.

Switching point tolerances

The switching point tolerances specified by us pertain to room temperature (RT) and condition as new. The values can change as a result of temperature, ageing and deployment conditions.

It is not possible to specify generally applicable value for switching point tolerances over temperature as the medium has a significant influence on the sealing materials in the pressure switch. Double the tolerance stated

for RT and condition as new can be assumed as a typical magnitude for the tolerance over the entire temperature range.

Based on their design, piston switches may exhibit an increase in switching points due to storage (dry run, stick-slip effect). Following a short start phase, the switching points return to the value set at the factory.

Pressure change rates of >1bar/s may have an effect on the switching point for diaphragm pressure switches. The switching point (for rising pressure) and hysteresis increase, whilst the switch-back point (for falling pressure) sinks. Also, the effect of the maximum (system) pressure on the switch-back point (for falling pressure ramp) must be factored in for tolerance-critical applications. The higher the (system) pressure, the lower the resulting switch-back value.

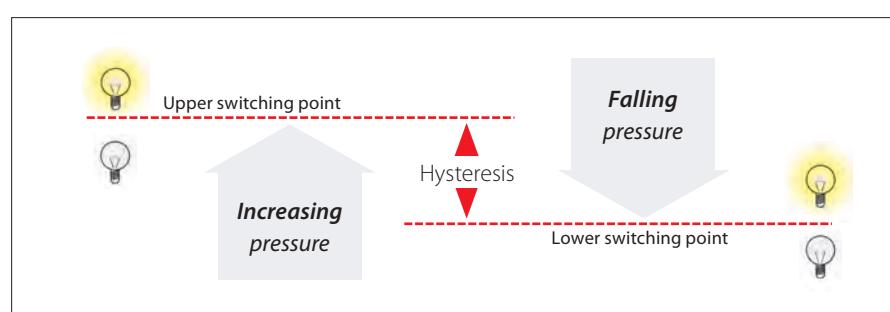

Hysteresis

Rising / falling switching point

The pressure difference between the rising (upper) and falling (lower) switching points (refer to the figure) is known as hysteresis (switch-back difference).

Hysteresis is derived from the structural layout of a mechanical pressure switch. It has no constant value within the adjustment range, and is lowest for the lowest adjustment value. It is greatest at the end of the adjustment range.

Hysteresis can be set at SUCO in range from approx. 10% (at end of adjustment range) to 30% or higher (at start of adjustment range), related to the respective switching point for hex 27 and 30 A/F pressure switches with adjustable hysteresis.

Technical explanations for mechanical pressure switches

The specifications in the catalogue only represent typical average values.

Please ask about the possible setting ranges you may require. Our electronic pressure switches are excellently suited to extremely low or high hysteresis.

The lowest possible hysteresis is set if nothing is specified in the order.

Switching frequency

The switching frequency provides information on the possible number of cycles in one minute. The value of 200/minute specified by us is a guideline value. Higher cycle values can be attained depending on switch type and conditions of use.

Sealing materials

The priority in sealing material selection is the chemical resistance. The temperature range only becomes a selection criterion when different sealing materials are suitable for the medium.

NBR (Buna-N)

This is the standard material most commonly used. It is a special SUCO material mix with high level of cold flexibility so that the sealing properties of the pressure switch are also retained at low temperatures.

NBR is denoted by number "1" in our order number.

EPDM

This material is the solution of choice for applications with brake fluids. It is particularly suitable for applications with (process) water. Approval from the BAM (Federal Institute for Material Testing) is in place for oxygen applications. The safety regulations from country-specific authorities must be observed for oxygen applications.

EPDM may not come into contact with oil because this would entail swelling and softening of the material, and so failure of the pressure switch.

EPDM is denoted by number "2" in our order number.

EPDM with drinking water approval W270

This EPDM material is intended for drinking water applications and for use in medical and pharmaceutical applications. Approval as per code "DVGW Technical Codes, Worksheet W270" is in place for this.

EPDM may not come into contact with oil because this would entail swelling and softening of the material, and so failure of the pressure switch.

EPDM W270 is denoted by number "5" in our order number.

FKM / FPM (Viton®)

This is a diaphragm material suitable for high temperature exposure and exhibits special chemical resistance. It has been tested in the hydraulic sector and has been proven to work successfully with critical oils.

FKM/FPM is denoted by number "3" in our order number.

TPE (Thermoplastic elastomers)

This sealing material is available only for our electronical products of the Performance Series. TPE offers similar media compatibility like NBR, e.g. suitable for mineral oil and hydraulic fluids. Additionally the material can be used with diluted acids and bases and cold water, too.

TPE is denoted by number "7" in our order number.

ECO (epichlorhydrin)

ECO is only used in our vacuum switches. This material has similar properties to NBR in terms of chemical resistance, and can be used in gas applications as well as oil and fuel applications.

ECO is denoted by number "4" in our order number.

Silicone

Silicone is suitable for use within a wide temperature range. The SUCO silicone diaphragm is FDA-approved (Food & Drug Administration) for the food sector.

Silicone is a soft material reserved for sensitive applications in the low pressure range (below 10 bar) with maximum overpressure safety to 35 bar. Piston switches are therefore not offered with silicone seals. Silicone is also not suitable for oil applications.

Silicone is denoted by number "8" in our order number.

H-NBR

This is a special SUCO material mixture optimised for ester-based bio-oils. The multitude of bio-oils on the market means suitability of the material for the respective oil must be determined. This diaphragm material can also be used for a number of mineral and synthetic oils.

H-NBR is denoted by number "9" in our order number.

Medium compatibility

The specifications on medium compatibility in this catalogue cannot be generalised as they pertain to the sealing materials used in our pressure switches.

Saturated and superheated steam applications

The sealing materials mentioned are not suitable for saturated or superheated steam applications.

Conversion table for pressure units

Unit symbol	Unit name	Pa= N/m ²	bar	Torr	Ibf/in ² , PSI
1 Pa = N/m ²	Pascal	1	0.00001	0.0075	0.00014
1 bar	Bar	100 000	1	750.062	14.5
1 Torr = 1 mm Hg	Millimetres, mercury column	133.322	0.00133	1	0.01934
1 Ibf/in ² = 1 PSI	Pound-force per square inch	6894	0.06894	51.71	1

Conversion table for temperature units

	K	°C	F
K	1	K-273.15	9/5 K-459.67
°C	°C + 273.15	1	9/5 °C + 32
F	5/9 (F+459.67)	5/9 (F-32)	1

Please consult us about gas, water and oxygen applications.

Water applications

Standard piston switches are not suitable for water applications.
For pressure switches with stainless steel housing and standard EPDM seals SUCO type "3" (series 0187 and 0197) the use of clean water is allowed. Water with corrosion protection, water mixtures and emulsions needs to be clarified with SUCO (e.g. swelling of EPDM sealing could happen by water – oil mixture). Pressure switches with stainless steel housings with EPDM-W270 diaphragm, SUCO type "5" are designed for the use of drinking water.

Gas applications

Our pressure switches are suitable for liquid and gaseous media. Gaseous media place particular demands on leak-tightness however. The leakage rate is dependent on the respective gaseous medium, the working pressure and the permeability of the seal material used in the pressure switch.

Their lower leakage rates mean diaphragm pressure switches are better suited for gas pressures than piston pressure switches. The latter can also be used however if certain measures are taken (such as venting of the housing). For gaseous applications below 10 bar (145 PSI) in combination with pressure switches with high IP class, i.e. IP 67 and IP 6k9k, in general we recommend to use ventilation. Please consult us; we are able to offer suitable solutions.

Oxygen applications

Our mechanical pressure switches are suitable for use with oxygen. We recommend the use of our EPDM diaphragm. The resistance to internal burnout of the diaphragm has been tested by the BAM (Federal Institute for Material Testing).

Pressure switches in steel housings with zinc-nickel coating are, in conjunction with oxygen, only approved to a maximum working pressure of 10 bar.

Pressure switches in brass housings are, in conjunction with oxygen, only approved to a maximum working pressure of 35 bar.

Pressure switches in stainless steel housings are, in conjunction with oxygen, only approved to a maximum working pressure of 50 bar.

DGUV accident prevention regulations (such as DGUV 500, Section 2.32 and BGI 617) must be observed for first operation.

Please specify when ordering "oil and grease-free, for use with oxygen".

Underpressure safety of pressure switches

Our pressure switches are underpressure safe down to 300 mbar (relative).

Overpressure safety of vacuum switches

Our vacuum switches are overpressure safe up to 20 or 35 bar depending on type.

cCSAus approval

Almost all of our mechanical pressure switches (sizes hex 24 and hex 27), and vacuum switch 0151, have cCSAus approval. The CSA mark together with "c" and "us" combines the control stamps for introduction onto the Canadian and American markets. The cCSAus certificate also includes the test of the relevant UL standard.

Checked by an official institution and verified with regular company visits by CSA inspectors, this approval guarantees the highest levels of quality and operational reliability for our products.

You can download the current cCSAus certificate from the download area on the homepage:

Product information

The technical information in this catalogue is based upon fundamental testing during product development, as well as upon empirical values. The information cannot be used for all application scenarios.

Testing of the suitability of our products for a specific application (e.g. also the checking of material compatibilities) rests under the responsibility of the user. It may be the case that suitability can only be guaranteed with appropriate field testing.

Subject to technical changes.

M.1

hex 24 integrated

Pressure switches hex 24 with integrated connector

NC or NO, maximum operating voltage up to 42 V

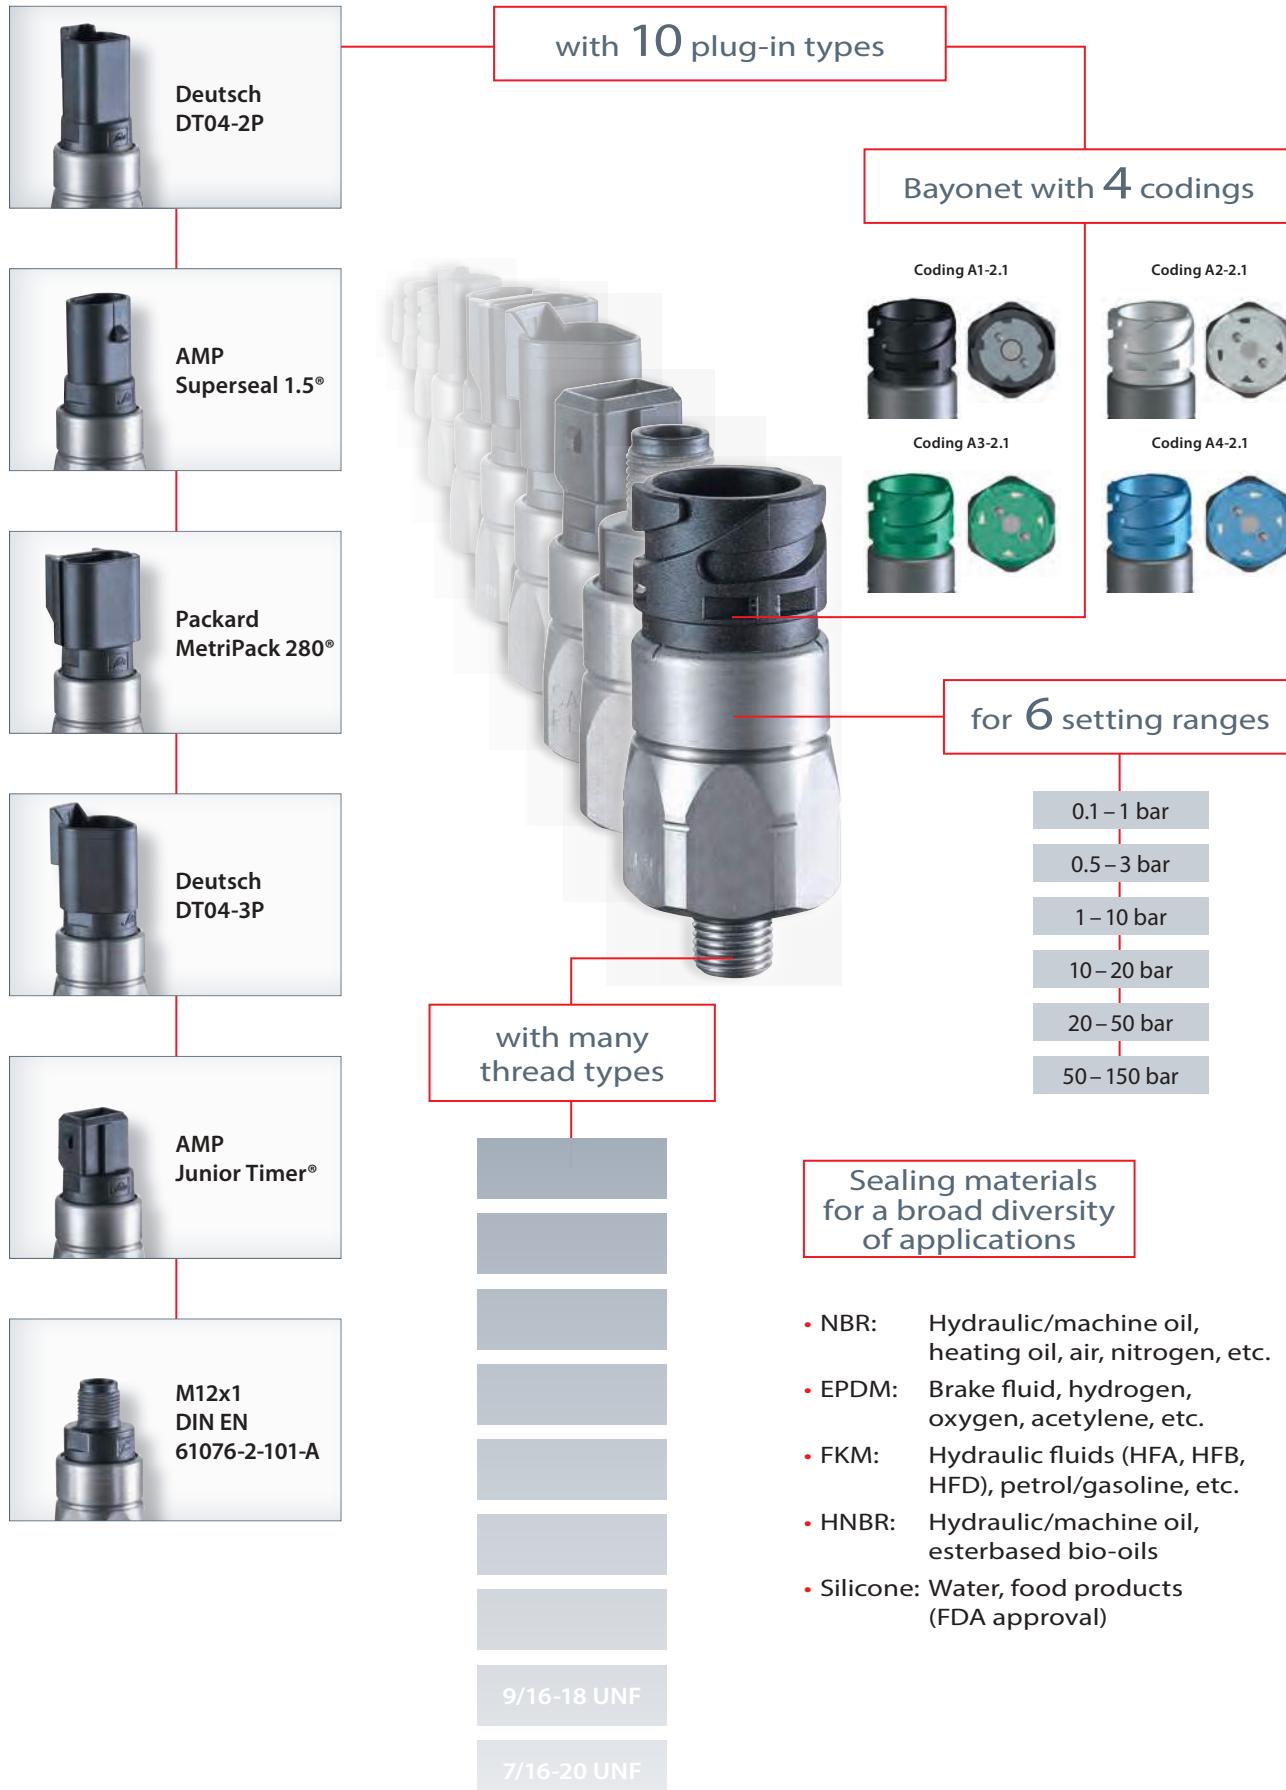

- Large selection of electrical plug-in types for quick attachment and reliable connection
- High protection class (to IP67 or IP6K9K)
- Compact and rugged design in industrial environments like construction and agricultural machinery or commercial vehicles
- Switching point can be set on site with adjusting screw in the connector¹⁾
- High overpressure resistance, compact, small switches, available as normally open or normally closed

¹⁾ Pressure switches can also be supplied preset at factory.
The switching point is embossed onto pressure switches preset at factory.

The all-rounder with the broad selection of options

NC or NO, maximum operating voltage up to 42 V

Rated working voltage:	10 ... 42 VAC/DC	
Rated current range (resistive load, DC 12 / AC 12):	10 mA ... 4 A	
Switching power DC 12 / AC 12	100 W / 100 VA	
Temperature resistance of sealing materials:	NBR	-40 °C ... +100 °C
	EPDM	-30 °C ... +120 °C
	FKM (in diaphragm pressure switch)	-5 °C ... +120 °C
	FKM (in piston pressure switch)	-15 °C ... +120 °C
	Silicone	-40 °C ... +120 °C
	HNBR	-30 °C ... +120 °C
Switching frequency:	200 / min.	
Mechanical life expectancy:	1,000,000 cycles (for diaphragm pressure switches, life expectancy value only applies for switching pressures to max. 50 bar)	
Pressure rise rate:	$\leq 1 \text{ bar/ms}$	
Hysteresis:	Average value 5...30 % depending on type, not adjustable	
Vibration resistance:	10 g; 5...200 Hz sine wave, DIN EN 60068-2-6	
Shock resistance:	294 m/s ² ; 14 ms half sine wave; DIN EN 60068-2-27	
Protection class:	Up to IP67 / IP6K9K according to the manufacturer's specifications for the respective plug-in system only when plugged in, otherwise IP00	
Weight:	approx. 90 g

M.2

hex 27 integrated

Pressure switches hex 27 with integrated connector

Changeover switch with silver or gold contacts

- Large selection of electrical plug-in types for quick attachment and reliable connection
- Hysteresis adjustable at factory
- High protection class (to IP67 or IP6K9K)
- Compact and rugged design in industrial environments like construction and agricultural machinery or commercial vehicles
- Switching point can be set on site with adjusting screw¹⁾
- Very high overpressure safety
- The corresponding mating plugs are available as accessories (please refer to page 34)

¹⁾ Pressure switches can also be supplied preset at factory.
The switching point is embossed onto pressure switches preset at factory.

Pressure switches hex 24

NC or NO, maximum voltage 42 V

- Most cost-effective solution for mechanical pressure monitoring
- Stable switching point even after long use and high load
- Switching point can be adjusted when fitted on site¹⁾
- High pressure resistance, compact, small switches, available as normally closed (NC) or normally open (NO)
- For solutions with integrated connectors please refer to chapter M.1, starting at page 22

¹⁾ Pressure switches can also be supplied preset at factory.

Our preset switches are sealed with lacquer paint, set points are embossed on the housing.

Technical data

M.3

hex 24

M

Rated working voltage:	10 ... 42 VAC/DC	
Rated current range (resistive load, DC 12 / AC 12):	10 mA ... 4 A	
Switching power DC 12 / AC 12:	100 W / 100 VA	
Temperature resistance of sealing materials:	NBR	-40 °C ... +100 °C
	EPDM	-30 °C ... +120 °C
	EPDM-W270, diaphragm	-20 °C ... +100 °C
	FKM (in diaphragm pressure switch)	-5 °C ... +120 °C
	FKM (in piston pressure switch)	-10 °C ... +120 °C
	Silicone, diaphragm	-40 °C ... +120 °C
	HNBR	-30 °C ... +120 °C
Switching frequency:	200 / min.	
Mechanical life expectancy:	1,000,000 cycles (for diaphragm pressure switches, life expectancy value only applies for switching pressures to max. 50 bar)	
Pressure rise rate:	$\leq 1 \text{ bar/ms}$	
Hysteresis:	Average value 5 – 30 % depending on type, not adjustable	
Vibration resistance:	10 g; 5 – 200 Hz sine wave; DIN EN 60068-2-6	
Shock resistance:	294 m/s ² ; 14 ms half sine wave; DIN EN 60068-2-27	
Protection class:	IP65 Terminals IP00	
Weight:	approx. 90 g

¹⁾ Static value. Dynamic value is 30-50 % lower. Values pertain to the hydraulic/pneumatic part of the pressure switch.

Pressure switches hex 27

Changeover with silver or gold contacts

- Switching point can be adjusted when fitted on site¹⁾
- Factory adjustable hysteresis (except types 0140 and 0141)
- High overpressure safety and long service life under harsh conditions
- Operating voltage up to 250 V
- Series 0140 / 0141 with protective insulation
- For ready-wired customized versions refer to chapter M.5, starting at page 62
- For pressure switches with integrated connectors refer to chapter M.2, starting at page 32

¹⁾ Pressure switches can also be supplied preset at factory.

Our preset switches are sealed with lacquer paint, set points are embossed on the housing.

Pressure switches hex 27

Technical data

M.4

hex 27

Temperature resistance of sealing materials:	NBR (max. overpressure up to 100 bar)	-30°C ... +100°C
	NBR (max. overpressure up to 300/600 bar)	-40°C ... +100°C
	EPDM	-30°C ... +120°C
	EPDM-W270 (in diaphragm pressure switch)	-20°C ... +100°C
	FKM (in diaphragm pressure switch)	-5°C ... +120°C
	FKM (in piston pressure switch)	-15°C ... +120°C
	Silicone (in diaphragm pressure switch)	-40°C ... +120°C
	HNBR	-30°C ... +120°C
Switching frequency:	200/min.	
Mechanical life expectancy:	1,000,000 cycles (for diaphragm pressure switches, life expectancy value only applies for switching pressures to max. 50 bar)	
Pressure rise rate:	$\leq 1 \text{ bar/ms}$	
Hysteresis (only adjustable at factory):	Adjustable average value 10 ... 30 % depending on type Types 0140 and 0141 cannot be adjusted	
Vibration resistance:	10g; 5 ... 200 Hz sine wave; DIN EN 60068-2-6	
Shock resistance:	294 m/s ² ; 14 ms half sine wave; DIN EN 60068-2-6, DIN EN 60068-2-29	
Protection class:	IP65 with socket device, terminals IP00	
Weight:	approx. 100 g

hex 24 / 27
Ready-wired

hex 24 / hex 27 ready-wired pressure switches

Custom designs

- Ready-wired pressure switches hex 24 and hex 27, available with all commercial plug-in types and individual cable length.
- The technical details of ready-wired pressure switch types correspond to those of the same standard pressure switch types. Different technical details will be agreed with the customer.
- Pressure switches usually have protection class IP65. Our ready-wired pressure switches attain IP67 or IP6K9K. This is a requirement in particular in commercial vehicle construction, mobile hydraulics and similarly demanding applications.
- Ready-wired pressure switches enable plug connectors to be moved in climatically non-critical and low-vibration areas.
- The modular layout also enables the production of lower volumes.
- The switching point for ready-wired pressure switches is factory-set to a fixed value.
Exception: The switching point of the 0240/0241 can be adjusted on site even after the sealing process.

hex 24 / 27

Custom designs

All hex 24 and hex 27 pressure switches can be individually wired according to customer needs.

Technical data

Refer to page 54 for electrical values

Rated working voltage:	max. 42 V / 250 V depending on connection	
Rated working current:	max. 2 A	
Protection class:	2, protective insulation <input checked="" type="checkbox"/>	
Temperature resistance of sealing materials:	NBR	-40 °C ... +100 °C
	EPDM	-30 °C ... +120 °C
	FKM (in diaphragm pressure switch)	-5 °C ... +120 °C
	FKM (in piston pressure switch)	-15 °C ... +120 °C
	Silicone	-40 °C ... +120 °C
	HNBR	-30 °C ... +120 °C
Switching frequency:	200 / min.	
Mechanical life expectancy:	1,000,000 cycles (for diaphragm pressure switches, life expectancy value only applies for switching pressures to max. 50 bar)	
Pressure rise rate:	$\leq 1 \text{ bar/ms}$	
Hysteresis:	Average value 10 – 20 % (not adjustable)	
Vibration resistance:	10 g / 5 – 200 Hz sine wave, DIN EN 60068-2-6	
Shock resistance:	294 m/s ² ; 14 ms half sine wave, DIN EN 60068-2-6	
Materials:	Housing material: zinc-plated steel Protective cap: anodised aluminium	
Protection class:	IP67	
Cable:	Standard length 2 m with wire end sleeves	
Weight:	approx. 120 g	

Options for 0240 / 0241

- Other cable lengths and plug-in systems
- Fixed switching point, factory-set, set point embossed on housing
- Alternative housing materials and connection threads
- Other sealing materials, such as silicone for diaphragm pressure switches

0240 / 0241

Diaphragm / piston pressure switches, hex 27

- Zinc-plated steel (CrVI-free)
- Overpressure safety up to 300 / 600 bar¹⁾
- Switching point can also be adjusted during use
- Protection class 2, protective insulation

Pressure switches **PLUS**

with integrated connector and supplementary functions

Hex 24, NC or NO, voltage up to 42 V

Intelligent, supplementary electronic functions broaden the capabilities of mechanical pressure switches by adding numerous features:

- Diagnostic function (fail-safe) with short-circuit and cable break detection
- Overvoltage protection for prolonging the contact service life
- Active reduction of EMC emissions
- Temperature-controlled switching function (e.g. cold start, i.e. switching function does not become active until from a certain temperature)
- In-rush current limitation (overload limitation of switching contacts from too high a switch loading, e.g. lamp load, motor start-up)
- Display of the switching status with LED
- Overload protection with self-resetting electrical fuse
- High protection class to IP67 and IP6K9K
- Large selection of electrical plug-in types for quick installation and reliable connection

Overview of possible supplementary functions

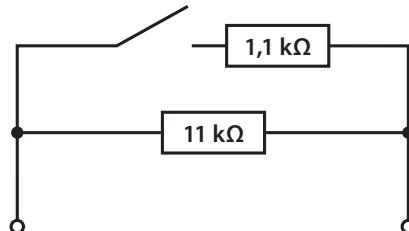

Circuit	Switch symbol	Function	Application	Code for order number
Resistor Resistor circuit to NAMUR, refer to page 68		<ul style="list-style-type: none"> Diagnostic function (fail-safe) with short-circuit and cable break detection 	Safety systems such as brake systems, hydrostatic steering systems and fire extinguisher systems	04XX - R
Varistor Circuit with varistor for overvoltage limitation, refer to page 69		<ul style="list-style-type: none"> Overshoot protection for the prolonging of contact service life under conditions of inductive load and long connection length Active reduction of EMC emissions on switching of the pressure switch 	The flyback voltage is effectively limited if the pressure switch interrupts the current in circuits with magnetic valves, relays or motors	04XX - V
NTC thermistor		<ul style="list-style-type: none"> Temperature-controlled switch behaviour (e.g. filter monitoring) In-rush current limitation, e.g. for motors ("soft start") and in PSUs On-delay (in series) and dropout delay (in parallel) for relays 	For a cold start in a mobile hydraulic application, a pressure switch used for filter monitoring may activate due to the high viscosity of the oil at low temperatures, and signals a blocked filter. The NTC thermistor integrated in the pressure switch means the circuit remains interrupted until the pressure switch, and so also the thermistor, have warmed up; not until then does the circuit become low impedance.	04XX - N
PTC thermistor		<ul style="list-style-type: none"> Protection against overcurrent In-rush current limitation, such as for filament lamps and condenser load 	E.g. brake light monitoring in mobile hydraulics: The in-rush current can be up to 8 times the nominal current of a filament lamp. This high current is only reduced at the moment of switch-on, thereby protecting the contact system of the pressure switch from overload.	04XX - P
LED		<ul style="list-style-type: none"> Displays the switching status by an integrated LED 	Direct switching status display for applications in which the controller is physically remote; e.g. in an automation system or permanently installed extinguishing or gas systems.	04XX - L
Multifuse, PPTC		<ul style="list-style-type: none"> Protection against overcurrent Self-resetting: After removing the short-circuit (cooling the MF) the fuse resets 	In applications which need to be protected against overcurrent e.g. electronic applications	04XX - M

¹⁾ Pressure switches can also be supplied preset at factory.

The switching point is embossed onto pressure switches preset at factory.

The additional circuitry of the switching contact of the pressure switch enables not only the states to be shown enabled and disabled, it also enables interrogation for line breaks (standby current principle) and short-circuits in the electric circuit.

The resistor circuitry is designed such that the NAMUR specifications can be satisfied. An operating voltage of 8.2 V must be provided for NAMUR-compliant operation. A resistance of 11 kΩ is present in the circuit when the switch contact is open. The resistance is 1 kΩ when the switch contact is closed. Other resistance values can also be realised.

Switching status	Closed	Open	Short-circuit SC	Line break LB
Contact				
Resistor				
Current				
Example: Supply voltage 12 VDC	$I = \frac{12V}{1k\Omega} = 12mA$	$I = \frac{12V}{11k\Omega} = 1.1mA$	$I \gg \frac{Ucc}{1k\Omega}$	$I = 0mA$

Technical data	
Rated working voltage Ucc:	8.2 VDC ... 30 VDC
Maximum rated operating current:	$\leq 30mA$
Switching capacity:	$< 1W$
Switching frequency:	200 / min.
Mechanical and electrical service life:	1,000,000 cycles
Permitted pressure rise rate:	$\leq 1 \text{ bar} / \text{ms}$
Vibration resistance:	10 g; 5 – 200 Hz sine wave; DIN EN 60068-2-6
Shock resistance:	294 m/s ² ; 14 ms half sine wave; DIN EN 60068-2-27
Protection class:	Refer to the table on the following pages: According to manufacturer specifications for the respective plug-in system (but only when plugged in), otherwise IP00.

Circuit with varistor for overvoltage limitation (pressure switches with part numbers 04XX-V)

The switching off of inductive consumers such as valves, relays and motors by a mechanical pressure switch generates a high voltage peak. The cause for this is the energy stored in the magnetic field of inductance, which entails an induction voltage when the current is changed.

The induction voltage (or flyback voltage) is defined as follows:

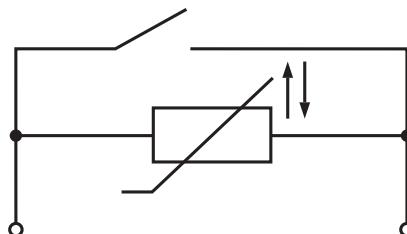

$$U_L = -L \frac{di}{dt}$$

where L inductance
 di/dt change of current over time

This induction voltage can result in discharge effects and the occurrence of arcs at the opening contacts. This gives rise to localised, very hot places on the contact surfaces which are able to fuse the contact material. Increasing load damages the contact surface and the contact transition resistance rises. This can result in sporadic interruption, adhesion and welding of the contacts, and so lead to complete failure of the pressure switch.

The effect of induction voltage is countered by means of a varistor – a resistor which reduces its ohmic resistance with increasing connection voltage. The induction voltage is limited to the responding value of the varistor, and the energy is converted to heat in the varistor.

Varistors are suitable for DC and AC in equal measure. In DC circuits, the response voltage of the varistor must be greater than the highest value of the supply voltage. In AC circuits, it must be 1.5 times the peak-peak value of the supply voltage.

Technical data

Rated operating voltage Ucc:	10 V ... 24 ... 30 VDC / 10 V ... 21 VAC
Rated operating current, ohmic load DC12 / AC12:	10 mA ... 4 A
Rated operating current, inductive load DC13 / AC13:	10 mA ... 1 A
AC / DC switching capacity:	< 100 W / 100 VA
Switching frequency:	200 / min.
Varistor response voltage:	41 VDC ± 10 % @ 1 mA
Maximum varistor energy:	0.4 J (10/1000 µs); 0.3 J (2 ms)
Maximum varistor peak current:	120 A (8/20 µs, one-off loading), 60 A (8/20 µs, dual loading)
Mechanical service life:	1,000,000 cycles
Permitted pressure rise rate:	≤ 1 bar / ms
Vibration resistance:	10 g; 5 – 200 Hz sine wave; DIN EN 60068-2-6
Shock resistance:	294 m/s ² ; 14 ms half sine wave; DIN EN 60068-2-27
Protection class:	Refer to the table on the following pages: According to manufacturer specifications for the respective plug-in system (but only when plugged in), otherwise IP00.

ATEX

Explosion-protected pressure switches

To ATEX standard

- ATEX-certification for use in potentially explosive areas
- Switching point can be easily adjusted by the user whilst system in operation
- Compact design
- Excellent price/performance ratio

Explosion-protected pressure switches

Technical data

M.8

ATEX

Technical explanations

Explosion-protected pressure switches are classified according to the respective combustible material type. This division is:

Gases and vapours 0165	Dusts 0340 / 0341	Methane dust not suitable
---------------------------	----------------------	------------------------------

Our pressure switches are generally designed for use with gases, vapours or dust.

Our explosion-protected pressure switches are not approved for use with methane dust (mining applications).

The table provides an overview of the zone divisions, equipment groups and equipment categories.

Conditions in potentially explosive atmosphere

Combustible materials	Temporary behaviour of combustible materials in potentially explosive area	Categorisation of potentially explosive areas	Marking required on equipment to be used	
			Equipment group	Equipment category
Gases Vapours	are present continually, frequently or for long periods	Zone 0	II	1G
	occur occasionally	Zone 1	II	2G or 1G
	are unlikely to occur, and if so, are then only seldom or for short periods	Zone 2	II	3G or 2G or 1G
Dusts	are present continually, frequently or for long periods	Zone 20	II	1D
	occur occasionally	Zone 21	II	2D or 1D
	occur if accumulated dust is whirled up, and then only seldom or for short periods	Zone 22	II	3D or 2D or 1D
Methane dust	-	Mining industry	I	M1
	-	Mining industry	I	M1 or M2

Refer to page 82 for the temperature range and application thresholds of sealing materials

Your order number: 034X – XXX 03 – X – XXX

Piston pressure switches only have limited suitability for use with gases (refer to Page 14 for explanations).

¹⁾ Static value. Dynamic value is 30-50 % lower. Values pertain to the hydraulic/pneumatic part of the pressure switch.

Vacuum switches

- Switching point can be adjusted when fitted on site¹⁾
- High overpressure resistance
- Long service life even under harsh conditions
- 0150 series available as changeover contacts up to 250 V
- 0151 series available as NC or NO up to 42 V

¹⁾ Pressure switches can also be supplied preset at factory.

Our preset switches are sealed with lacquer paint, set points are embossed on the housing.

Electronic pressure switches with ceramic measuring cell

E.1. Electronic pressure switches, Performance series, hex 24, adjustable at factory

from page 106

Switching point:	0 – 100 bar
Overpressure protection:	Up to 2 x
Transistor outputs:	Qty: 1, maximum output current 0.5 A
Variant:	PNP
Housing materials:	Stainless steel 1.4305 (AISI 303)
Sealing materials:	NBR, FKM
Thread:	G1/4, NPT1/4
Types:	0500, 0501, 0502, 0503

E.2. Electronic pressure switches, Performance series, hex 24, adjustable by user

from page 110

Switching point:	0 – 100 bar
Overpressure protection:	Up to 2 x
Transistor outputs:	Qty: 1, output current: max. 0.5 A
Variant:	PNP
Housing materials:	Stainless steel 1.4305 (AISI 303)
Sealing materials:	NBR, FKM
Thread:	G1/4, NPT1/4
Special feature:	Switching status display (LED)
Types:	0510, 0511, 0512, 0513

E.3. Electronic pressure switches hex 27 / A/F 30, adjustable by user

from page 114

Switching point:	0 – 250 bar
Overpressure protection:	Up to 2 x
Transistor outputs:	Qty: 1, output current: max. 1.4 A
Variant:	PNP
Housing materials:	Zinc-plated steel (CrVI-free)
Sealing materials:	NBR, FKM, EPDM
Thread:	G1/4 male or female thread
Types:	0520

E.4. Menu-controlled electronic pressure switches with display from page 118

Special feature:	All functions programmable from menu
Switching point:	Switching state LEDs, display, coding, etc. 0 – 400 bar
Overpressure protection:	Up to 2 x
Transistor outputs:	Qty: 2, output current: max. 1.4 A
Variant:	PNP
Additional analogue output:	4 – 20 mA
Housing materials:	Anodised aluminium and die-casted zinc
Sealing materials:	NBR, FKM, EPDM
Thread:	Female thread
Types:	0570

Electronic pressure switches with SoS technology

E.5. Electronic pressure switches, High-Performance series, hex 22 with 1 switch output from page 122

Special feature:	Highest accuracy and long-term stability
Switching point:	0 – 600 bar
Overpressure protection:	Up to 4 x
Transistor outputs:	Qty: 1, maximum output current 0.5 A
Variant:	PNP or NPN
Housing materials:	Stainless steel 1.4305 (AISI 303)
Sealing materials:	All welded, without elastomer seal
Thread:	Different male threads
Types:	0530, 0531, 0532, 0533

E.6. Electronic pressure switches, High-Performance series, hex 22 with 2 switching outputs from page 126

Special feature:	Highest accuracy and long-term stability
Switching point:	0 – 600 bar
Overpressure protection:	Up to 4 x
Transistor outputs:	Qty: 2, maximum output current 0.5 A
Variant:	PNP or NPN
Housing materials:	Stainless steel 1.4305 (AISI 303)
Sealing materials:	All welded, without elastomer seal
Thread:	Different male threads
Types:	0540, 0541, 0542, 0544, 0545, 0546

Technical explanations for electronic pressure switches

What is an electronic pressure switch?

An electronic pressure switch converts the medium pressure which is present at the measuring cell into a digital, electrical switch signal (ON/OFF).

An electronic pressure switch is more complex than a mechanical pressure switch, and thus generally more expensive. As an electronic pressure switch has no moving parts (relative to each other), it usually has a much prolonged service life and provides a higher level of precision (depending on application). The hysteresis can be set over a wide range and virtually independently of the switching point.

Electronic pressure switches can also be equipped with additional functions, such as optical displays and menu control.

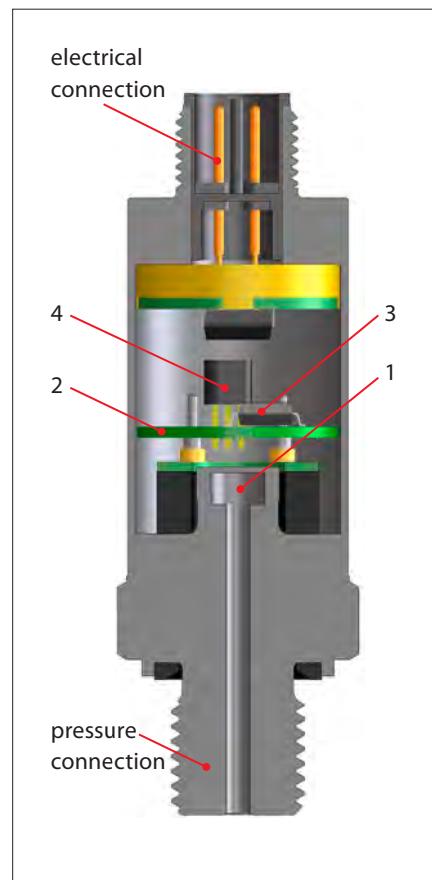

How does an electronic pressure switch work?

The pressure measuring cell fitted (1) has a membrane that is exposed to the pressure to be measured. Affixed to this membrane is a bridge circuit consisting of four ohmic resistors in the form of a Wheatstone bridge. The values of these resistors change proportionally to the pressure load present at the measuring cell or membrane. The bridge voltage of the measuring cell is amplified in the evaluation electronics (2) and processed digitally by a microcontroller (3).

Once the switching point or switch-back point is reached, the output transistor (4) closes or opens depending on the output function (normally open/closed contact).

SoS technology

In the silicone-on-sapphire technology, the substrate of the thin film measuring cell is synthetic sapphire. This has excellent mechanical and temperature stable properties and prevents undesired parasitic effects, thereby having a positive effect on accuracy and stability. In conjunction with a titanium membrane, this results in virtually unique coaction between the temperature coefficients of sapphire and titanium. This is because, unlike silicon and stainless steel, they are more closely matched and thus require only a low level of compensation. This also has a favourable effect on long-term stability.

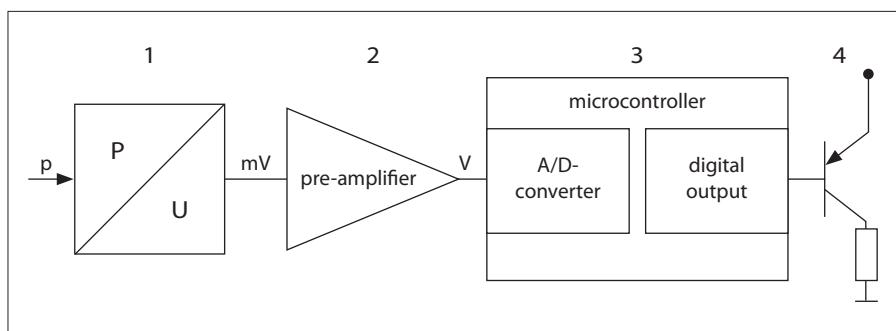

"Oil-filled" stainless steel measuring cell"

In this measuring cell technology, the piezo-resistive measuring cell is packaged within a metallic housing filled with fluorine oil. This means the measuring cell is virtually free of external mechanical stress. Fluorine oil has excellent characteristics in regards to temperature and ageing behaviour, and is not flammable and so fits perfectly for oxygen applications. It is not recommended for food applications.

Ceramic measuring cell / thick film technology

Ceramic thick film pressure measuring cells are made up of a sintered ceramic body. The ceramic body sleeve already has the key geometries for the subsequent pressure range. The membrane thickness required and thus, the pressure range required is established with grinding and lapping. The resistors are imprinted with thick film technology and interconnect to form a measuring bridge.

Block diagram

Adjustment range of switching point

The pressure range within which the switching point of an electronic pressure switch can be set is called adjustment range. The switching point corresponds to the pressure value at which the electric circuit of the output is opened or closed.

Switching point accuracy and tolerances

The switching point accuracy of electronic pressure switches is specified by SUCO and relates to the full scale value (FS). The switching point tolerances specified by us are valid at room temperature (RT) and new state. The values can change as a result of temperature, ageing and application specific conditions. Switching points can either be set at the factory or by the customer on site (depending on model).

Hysteresis

Rising/falling switching point

The difference between the rising (upper) and falling (lower) switching points (refer to the figure) is known as hysteresis (switch-back difference).

Our electronic pressure switches are a perfect fit to extremely low or high hysteresis.

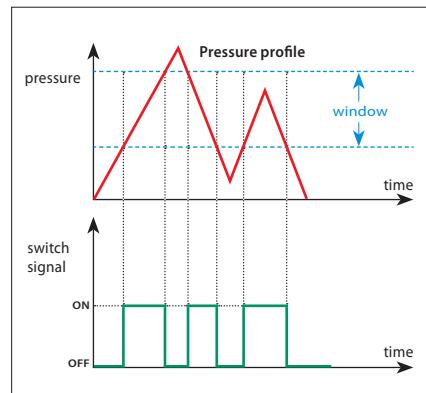

Hysteresis is either set at the factory or by the customer on site (only the 0570 series). The hysteresis or switch-back point of all pressure switches can be set over almost the entire adjustment range.

Please ask about the possible setting ranges you may require.

The hysteresis specified in the data sheet is set if nothing is specified in the order.

Window function

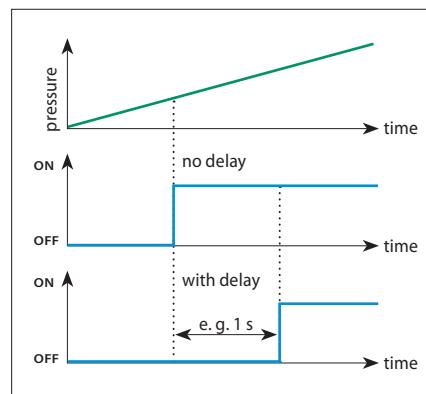

In the window function, the switch signal is programmed such that it remains ON or OFF between two values. This means a defined pressure range can be monitored. This function is only possible on the 053X series.

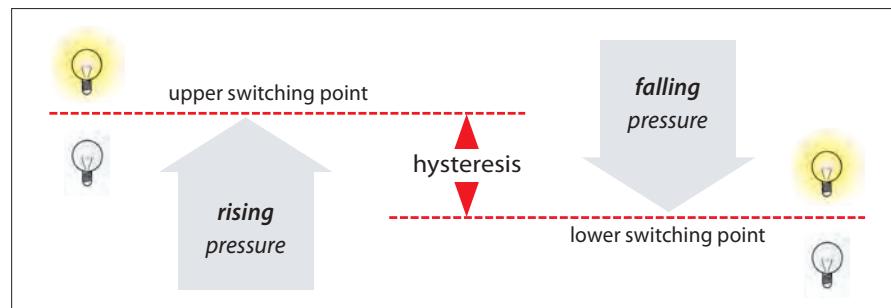

Switching delay

Switch outputs can be programmed with a delay separately for switch-on and switch-off (depending on model).

Delays of up to several seconds are possible.

Hysteresis

Operating/supply voltage

All electronic pressure switches work with DC voltage and have no galvanic isolation. Within the thresholds specified in the relevant data sheet, the supply voltage may change without influencing the output signal. In order to guarantee the functionality of an electronic pressure switch, the minimum operating voltage must be respected. The maximum operating voltage may not be exceeded to avoid damage on the electronics.

Output current

Depending on the model, electronic pressure switches have a maximum output current of 0.5 A to 1.4 A and therefore are also suitable for applications requiring relatively high control and switching currents.

Load

The output transistor is an open collector, i.e. the output must be wired with a load. The load limits the switching current and is selected according to the application.

Electronic pressure switches have protection from voltage peaks at the output, and are short-circuit proof. When inductive loads are switched (relays, motors, etc.), provision may have to be made for an additional electronic snubber to eliminate high voltage peaks. This is realised e.g. with flyback diodes, or even better with suppressor diodes or varistors.

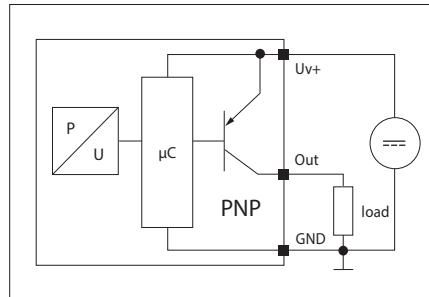

Technical explanations for electronic pressure switches

Connection types and output functions

There are essentially two different ways to connect the load or apparent ohmic resistance to electronic pressure switches:

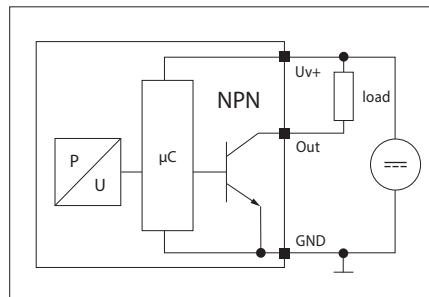

PNP output / high-side / plus-switching

PNP output (plus-switching) is the most popular variant in Europe. Here the load is connected to the output of the switch and ground (GND as reference potential).

NPN output / low-side / minus-switching

For an NPN output (minus-switching), the load is connected to the switching output and to the positive line of the supply voltage (Uv+ as reference potential).

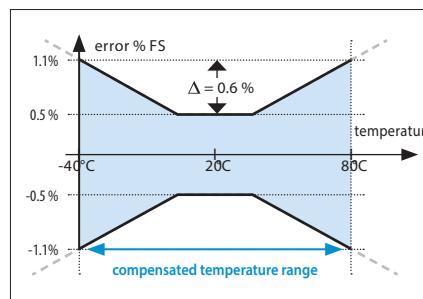

NO/NC

Electronic pressure switches are available as normally open (NO) or normally closed (NC) versions. Also refer to section M.0, page 14.

Temperature errors and ranges

The temperature (both of the medium and environment) generally has a significant influence on the accuracy of an electronic pressure switch. Electronic pressure switches are temperature compensated over a particular range corresponding to the typical application. This means that temperature errors within this temperature range are minimised by means of circuitry design and algorithms. The temperature error is added to the accuracy, and shown in the total error band of the electronic pressure switch, also called "butterfly graph". Outside the compensated temperature range, the maximum error is not defined, however the electronic pressure switch still functions. To prevent mechanical and electrical damage, electronic pressure switches may not be used beyond the threshold temperature ranges specified in the data sheet.

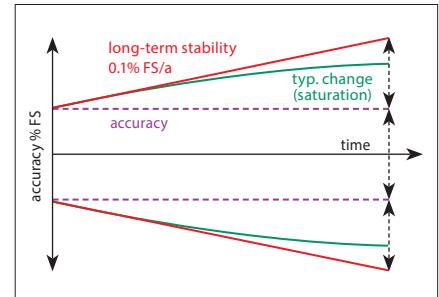

Service life and long-term stability

Service life information pertains to nominal conditions specified in the data sheet, and can vary considerably when a product is operated mechanically or electrically outside the specifications. Service life essentially depends on the used measuring cell technology.

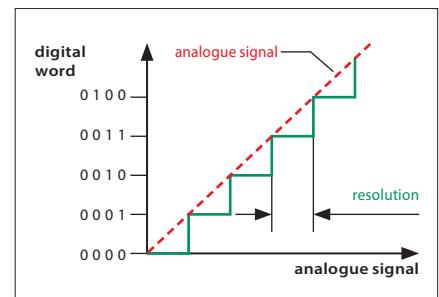

Ageing is accelerated (or slowed) due to different factors - such as temperature, temperature change and reduction of mechanical forces. The occurrence of ageing does effect the total accuracy.

SUCO specifies long-term stability in accordance with DIN 16086 in relation to one year. Typically the influence of aging on the accuracy reduces with increasing operating duration. The information in the data sheet corresponds to the worst case scenario.

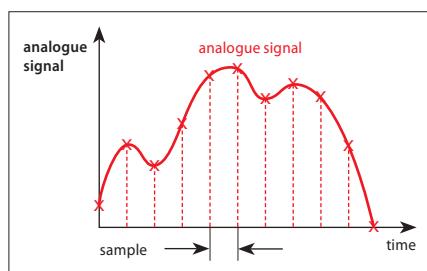

Resolution

The A/D resolution (analogue - digital) of an electronic pressure switch defines the smallest change of the analogue – digital – analogue conversion which takes place by the signal processing of an electronic pressure switch. If for example 13-bit resolution is used for an electronic pressure switch with a 100 bar setting range, the smallest signal change is 8192 steps (2^{13}). As state of the art a resolution of 12 bits and hence 4096 steps (2^{12}) is typical. Therefore pressure changes of 100 bar / 4096 = 0.024 bar can be recorded.

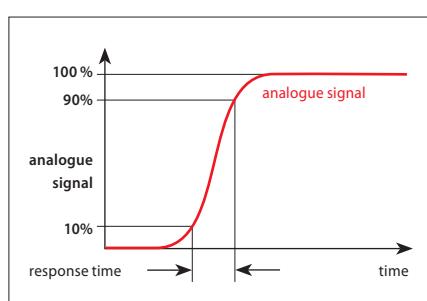

Sampling rate

The sampling rate (or sampling frequency) defines the number of samples per time unit (typically in seconds or milliseconds) taken from an analogue signal and converted to a digital signal. The sampling rate is an indicator of how fast the output signal of an electronic pressure switch responds to the pressure change at the input.

Response time

The response or circuit time is shorter than 2 to 4 milliseconds (depending on model). The sum of A/D and D/A conversions, and the analogue and digital filters in the signal chain from the measuring bridge to the output, make up the response time. Filtering is used to suppress unwanted pressure peaks and electrical interference signals, and for good EMC characteristics.

CE mark

Electronic pressure switches from SUCO fall under the 2014/30/EU EMC Directive. EC declarations of conformity have been issued for the electronic pressure switches are available on request or can be downloaded from our website. The relevant devices are denoted by a CE mark in our catalogue.

The Machinery Directive 2006/42/EC is not applicable, because our products are classed as components.

Our products are designed for Group 2 fluids based upon good engineering practise in line with Pressure Equipment Directive 2014/68/EU, meaning neither a declaration of conformation may be issued nor a CE mark affixed.

Electromagnetic compatibility (EMC)

Electronic pressure switches from SUCO do comply to all important industrial EMC standards. The basis for the standards are the stricter thresholds for transient emissions in residential environments (EN 61000-6-3) and immunity for industrial environments (EN 61000-6-2).

Generic standard	Test standard	Parameter(s)
Radio disturbance and immunity	EN 55016-2-1 EN 55016-2-3	60 dBuV
Radiated, high-frequency electromagnetic field immunity test	EN 61000-4-3	10 V/m; 80-2700 MHz, 3 V/m; 1400-2000 MHz, 1 V/m; 2000-2700 MHz
Immunity to conducted disturbances, induced by radio-frequency fields	EN 61000-4-6	10 V; 0.15-80 MHz
Electrical fast transient / burst immunity test	EN 61000-4-4	±2 KV
Surge immunity test	EN 61000-4-5	±0.5 KV (common) ±0.5 KV (differential)
Electrostatic discharge (ESD) immunity test	EN 61000-4-2	air: 8 KV with contact: 4 KV

Technical explanations for electronic pressure switches

Conversion chart for pressure units

Abbreviation for unit	Name of unit	Pa = N/m ²	bar	Torr	lbf/in ² . PSI
1 Pa = N/m ²	Pascal	1	0.00001	0.0075	0.00014
1 bar	Bar	100 000	1	750.062	14.5
1 Torr = 1 mm Hg	Millimeters of mercury	133.322	0.00133	1	0.01934
1 lbf/in ² = 1 PSI	Pound-force per square inch	6894	0.06894	51.71	1

Conversion chart for temperature units

	K	°C	F
K	1	K-273.15	9/5 K-459.67
°C	°C + 273.15	1	9/5 °C + 32
F	5/9 (F+459.67)	5/9 (F-32)	1

Insulation strength

According to the latest specifications for immunity to surges and lightning protection, the following must be taken into account when testing insulation strength: With insulation test devices having an inner resistance exceeding 42 Ohm, the insulation strength of electronic pressure switches can be tested up to 500 VDC. All contacts must be tested short-circuited against the housing. For a specific threshold value of test voltage, the protective circuit for surge protection is activated without any defects arising within the circuit. In the process, the current may rise to a point at which an insulation strength fault is indicated. The recommendation therefore is to conduct the insulation test of the electronic pressure switch when it is removed, or independently of the overall system.

Medium compatibility

The specifications on medium compatibility in this catalogue pertain to the specific seal and housing materials as well as the used measuring cell technology and so cannot be generalised.

Titanium

Its high levels of mechanical resistance and the wide media compatibility – in particular to corrosive media – do make titanium the ideal material for measuring cells and membranes. It is not recommended for oxygen or hydrogen applications.

Stainless steel (1.4305 / AISI 303)

Stainless steel with broad level of media compatibility. Also suitable for oxygen and hydrogen applications.

Stainless steel (1.4404 / AISI 316L)

Stainless steel with broad level of media compatibility. Also suitable for chemical industry and sea water applications.

Oxygen and hydrogen

Country-specific safety requirements and application guidelines must be observed if the medium to be monitored is oxygen or hydrogen, such as DGUV accident prevention regulations (DGUV 500, Section 2.32 and BGI 617).

**Please specify when ordering
"for oxygen, oil and grease-free".**

Pressure peak dampening

If required, our electronic pressure switches can also be fitted with a pressure snubber (pressure peak orifice) to protect the measuring cell against transient pressure loads such as pressure peaks due to the switching of valves, cavitation effects, etc. which can shorten life expectancy.

For liquid media, the hole of a pressure snubber cannot be chosen to be any small size. At low temperatures the viscosity of the media will increase. In a case of dropping pressure the media might remain in the cavity behind the snubber which might affect the functionality of the electronic pressure switch. Thus a bore diameter of 0.8 mm has been established.

Product information

The technical information in this catalogue is based upon fundamental testing during product development, as well as upon empirical values. The information cannot be used for all application scenarios.

Testing of the suitability of our products for a specific application (e.g. also the checking of material compatibilities) falls under the responsibility of the user. It may be the case that suitability can only be guaranteed with appropriate field testing.

Subject to technical changes.

hex 24
Performance
adjustable at factory

Electronic pressure switches, Performance series

hex 24, adjustable at factory

- Very attractively priced electronic pressure switches, particularly for high volume deployment
- High overpressure protection (up to 2 x)
- Small, compact electronic switches
- Broad diversity of electronic and mechanical connection options
- High level of adaptability to your requirements (custom solutions)
- Ceramic sensor in thick film technology
- Housing made of stainless steel (1.4305), others on request
- Hysteresis adjustable within a wide range (2 % – 98 %, set at factory)

Technical details

Type:	0500 NO 0501 NC												
Transistor output:	PNP output (High-Side N-channel)												
Supply voltage:	9.6 – 32 VDC with reverse voltage protection

Performance
adjustable by user

Electronic pressure switches, Performance series

hex 24, adjustable by user

- Very competitively priced electronic pressure switches
- High overpressure protection (up to 2 x)
- Small, compact electronic switches
- Broad diversity of electronic and mechanical connection options
- High level of adaptability to your requirements (custom solutions)
- Ceramic sensor in thick film technology
- Housing made of stainless steel (1.4305), others on request
- Easy adjustment of switching point from the outside using set screw
- Hysteresis adjustable within broad range (2 % – 98 %, set at factory)

menu-controlled

Menu-controlled electronic pressure switches

display

- Menu-controlled, simple programming of switching functions
- 2 switching outputs and 1 analogue output
- Numerous programming functions, such as
 - switching time delay
 - zero point reset
 - peak value memory
 - switching point counter
- Current pressure value and switching states shown on 3-digit display
- Very high switching currents up to 1.4 A

Technical details

Type:	0570 Electronic pressure switches
Switching function:	NC/NO, programmable, 2 switching points, switching time delay, zero point reset, peak value memory (within adjustment range), switching point counter
Settings:	Programmable using keypad on front
Outputs:	2 transistor outputs (each 1.4 A DC12 / PNP) 1 analogue output (4 – 20 mA)
Supply voltage U_B :	12 – 30 VDC
Switching status display:	2 LEDs (yellow)
Pressure display:	Current pressure displayable in bar or PSI on 3-digit LED (red)
Life expectancy:	5,000,000 pulsations at rise rates to 1 bar/ms at p_{nom}
Pressure rise rate:	≤ 1 bar/ms
Switching time:	< 4 ms
Switching time delay:	Adjustable between 0 and 3.0 s
Hysteresis:	1 – 99 % FS, programmable from keypad
Accuracy:	± 0.5 % (FS at room temperature)
Accuracy, display:	± 0.5 % (FS at room temperature) ± 2 digits
Temperature drift:	± 0.2 % / 10 °C
Temperature range:	NBR, EPDM, FKM -20 °C ... +80 °C
Compensated temperature range:	0 °C ... +70 °C (32 °F ... 158 °F), total error $\leq \pm 2$ %
Housing material:	die-casted zinc
Wetted parts material	Housing: zinc-plated steel
	Measuring cell: Ceramic
	Seal material: NBR, EPDM or FKM
Vibration resistance:	10 g at 5 ... 2000 Hz sine wave; DIN EN 60068-2-6
Shock resistance:	294 m/s ² ; 11 ms half sine wave; DIN EN 60068-2-27
Protection class:	IP65
EMV:	acc. to EN 50081-1, EN 50081-2, EN 50082-2
Weight:	approx. 340 g
Access pin:	The switch can be protected with a pin between 1 and 999

E.5

hex 22
High Performance
1 switching output

Electronic pressure switches, High-Performance series

hex 22 with one switching output

- Outstanding overpressure protection (up to 4 x)
- Ideal choice for mobile hydraulic applications
- Long service life even under high pressure change rates
- Wetted parts made of stainless steel and titanium ensuring excellent media compatibility
- All welded design, no elastomeric seal
- Silicon-on-sapphire technology (SoS) for highest reliability, accuracy and reliable process monitoring
- Very low temperature error and very good long-term stability
- Adjustment of switching point and hysteresis at factory

For versions with 2 switching outputs,
please refer to chapter E.6, page 126

High Performance
2 switching outputs

Electronic pressure switches, High-Performance series

hex 22 with two switching outputs

- Outstanding overpressure protection (up to 4 x)
- Ideal choice for mobile hydraulic applications
- Long service life even under high pressure change rates
- Wetted parts made of stainless steel and titanium ensuring excellent media compatibility
- All welded design, no elastomeric seal
- Silicon-on-sapphire technology (SoS) for highest reliability, accuracy and reliable process monitoring
- Very low temperature error and very good long-term stability
- Adjustment of switching point and hysteresis at factory

Technical explanations for pressure transmitters

What is a pressure transmitter?

A pressure transmitter (also called pressure transducer or pressure converter) is a component used to convert a pneumatic or hydraulic pressure to an electric (usually analogue and linear) output signal, such as a current or voltage.

How does a pressure transmitter work?

The pressure measuring cell fitted has a membrane (1) that is exposed to the pressure to be measured. Affixed on this membrane is a bridge circuit consisting of four ohmic resistors in the form of a Wheatstone bridge. The values of these resistors change proportionally to the pressure load present at the measuring cell or membrane. The bridge voltage of the measuring cell is amplified in the evaluation electronics (2) and processed digitally by a microcontroller (3).

The downstream output stage (4) converts this signal to the output signal required (such as 4 - 20 mA or 0 - 10 V).

This is because, unlike silicon and stainless steel, they are more closely matched and so only require a low level of compensation overhead. This also has a favourable effect on long-term stability.

"Oil-filled" stainless steel measuring cell

In this measuring cell technology, the piezo-resistive measuring cell is packaged within a metallic housing filled with fluorine oil. This means the measuring cell is virtually free of external mechanical stress. Fluorine oil has excellent characteristics in regards to temperature and ageing behaviour, and is not flammable and so fits perfectly to oxygen applications. It is not recommended for food applications.

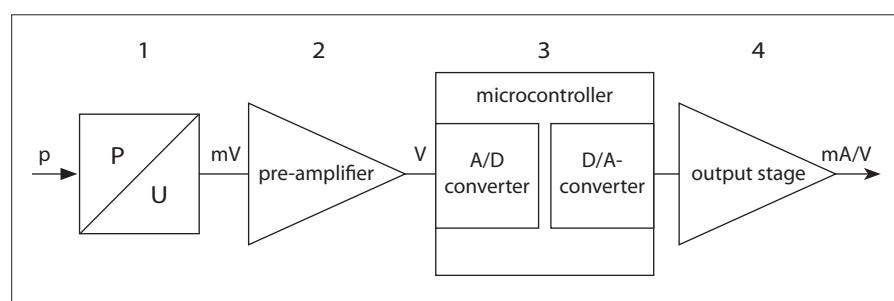

Ceramic measuring cell / thick film technology

Ceramic thick film pressure measuring cells are made up of a sintered ceramic body. The ceramic body sleeve already has the key geometries for the subsequent pressure range. The membrane thickness required and thus, the pressure range required is established with grinding and lapping. The resistors are imprinted with thick film technology and interconnect to form a measuring bridge.

Standard signals

Output signals 4 - 20 mA, 0 - 10 V and 0.5 - 4.5 V ratiometric in particular have established themselves in the industry. SUCO also offers transmitters with customer-specific output signals (such as 1 - 5 V).

Block diagram:

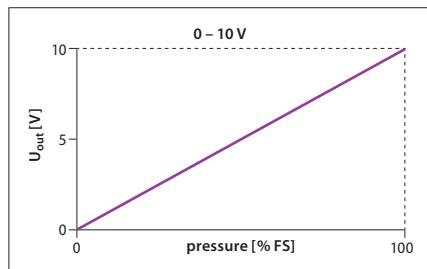

SoS technology

In the silicone-on-sapphire technology, the substrate of the thin film measuring cell is synthetic sapphire. This has excellent mechanical and temperature stable properties and prevents undesired parasitic effects, thereby having a positive effect on accuracy and stability. In conjunction with a titanium membrane, this results in virtually unique coaction between the temperature coefficients of sapphire and titanium.

Voltage output 0 - 10 V

Transmitters with an output signal of 0 to 10 V are a commonly used variant due to their simple initial operation and straightforward scaling of the signal (0 V for 0 bar). The output load must be selected as highly resistive (with typical minimum value 4.7 kΩ). SUCO transmitters with voltage output have a 3-wire design.

The maximum connection length should not exceed 30 m to prevent significant voltage drops in the signal line.

Conversion formula for pressure and voltage:

$$U_{\text{out}} = \frac{\text{pressure applied}}{\text{pressure range}} \times 10 \text{ V}$$

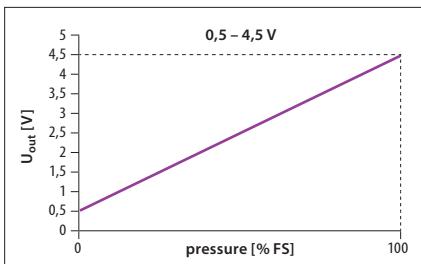

Voltage output

0.5 – 4.5 V ratiometric

SUCO transmitters with ratiometric output are operated with a 5 V supply voltage as 3-wire configuration.

The output signal is directly proportional/dependent to/on the supply voltage; this is known as a ratiometric dependency. 0.5 – 4.5 V is established as an output voltage because many A/D converters work with reference voltage U_{V+} of 5 V. The output voltage 0.5 V equals to 10% and 4.5 V corresponds to 90% of the supply voltage. The span is therefore 80% of the supply voltage.

This variant is used for example when a transmitter and a downstream A/D converter as an evaluation unit are to be powered with the same reference / operating voltage.

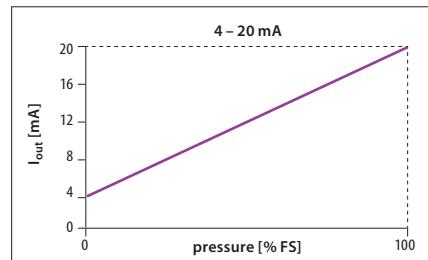

Conversion formula for pressure and voltage:

$$U_{\text{out}} = 0.1 \times U_{V+} + \frac{\text{pressure applied}}{\text{pressure range}} \times 0.8 \text{ V} \times U_{V+}$$

where U_{V+} = operating voltage

Current output 4 – 20 mA

The most common analogue output signal of sensors is 4 – 20 mA current output (as 2-wire configuration). The advantage of a 4 – 20 mA output signal is the 4 mA offset which allows the monitoring of potential wire break and short-circuit (life zero signal). The signal can also be transmitted over long distances with no loss in accuracy. This variant is also the least sensitive to EMC factors. 2-wire technology also means wiring overhead is reduced.

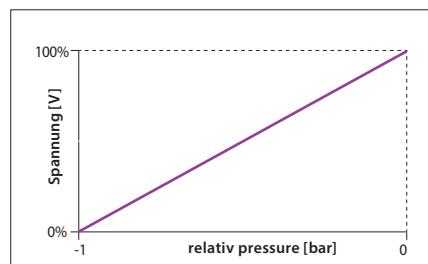

Conversion formula for pressure and current:

$$I_{\text{out}} = 4 \text{ mA} + \frac{\text{pressure applied}}{\text{pressure range}} \times 16 \text{ mA}$$

Output for vacuum transmitters

As depicted in the sketch below the output is at maximum signal at zero pressure. Therefore at maximum vacuum the output signal is at its minimum.

Load / apparent ohmic resistance for pressure transmitters

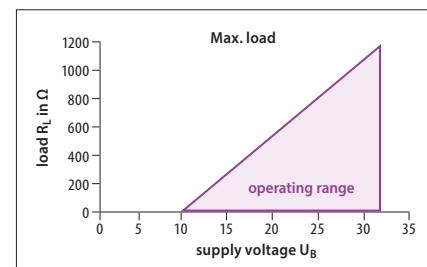

An appropriate ohmic load must be connected to guarantee perfect functioning of a pressure transmitter.

For transmitters with a voltage output (V), the load should be at least 4.7 kΩ.

For transmitters with a current output (4 - 20 mA), the maximum load is calculated using the following formula:

$$R_L = \frac{U_{V+} - U_{V+(min)}}{20 \text{ mA}}$$

$U_{V+(min)}$ is the minimum supply voltage - to be taken from the data sheet. $U_{V+(min)} = 10 \text{ V}$ gives the following operating range for example:

Supply / operating voltage U_B

All pressure transmitters work with DC voltage and have no galvanic isolation. Within the thresholds specified in the relevant data sheet, the supply voltage may change without influencing the output signal. (the ratiometric variant is an exception).

To guarantee the functionality of a transmitter, the minimum supply voltage may not fall below. The maximum operating voltage may not be exceeded to avoid damage on the electronics.

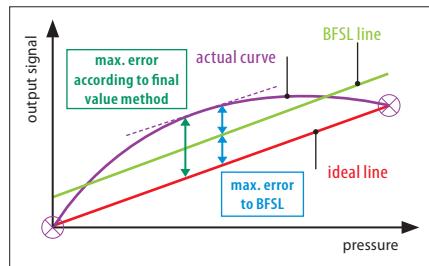

Technical explanations for pressure transmitters

Accuracy (to DIN EN 61298)

The (measuring) accuracy of pressure transmitters is specified by SUCO as $\pm 0.5\%$ or $\pm 1\%$ of the span (also called full scale). Accuracy includes zero point offset, non-linearity, hysteresis and non-repeatability, and is defined at room temperature and new state. This method defines the maximum deviation from the ideal line (in contrast to the BSFL method in which the average deviation is given). Other factors influencing the total accuracy, such as temperature and ageing, are specified separately.

Non-linearity (to DIN EN 61298)

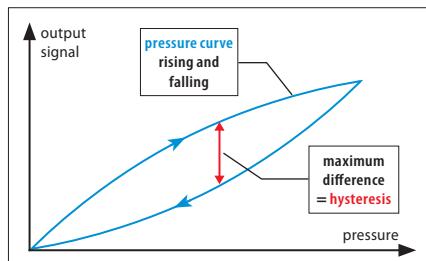

Non-linearity (also linearity) defines the deviation of the actual output curve from the theoretical ideal line. SUCO specifies the maximum error in relation to the overall span or full scale (FS) of the pressure range.

Non-linearity is also shown as BFSL (Best Fit Straight Line) as a reference value in the technical specifications. Non-linearity generally has the biggest influence on the overall error rate. Typically, non-linearity as per BFSL corresponds to half of non-linearity as per the full scale method ($1\% \text{ FS} \sim 0.5\% \text{ BFSL}$).

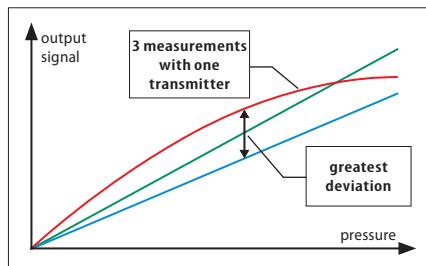

Hysteresis (to DIN EN 61298)

For a pressure transmitter, hysteresis specifies the difference of output signal between a rising and falling pressure, and is typically very low and negligible for SUCO pressure transmitters.

Non-repeatability (to DIN EN 61298)

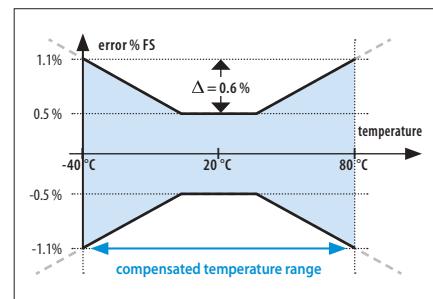

Non-repeatability defines reproducibility of the output signal. The pressure is attained three times for example - the maximum variance between these three values gives the non-repeatability.

Temperature errors and ranges

The temperature (both of the medium and ambience) generally has a significant influence on the accuracy of a pressure transmitter. Pressure transmitters are temperature compensated over a particular range corresponding to the typical application. This means that temperature errors within this temperature range are minimised by means of circuitry design and algorithms. The temperature error is added to the accuracy, and shown in the total error band of the pressure transmitter, also called *butterfly graph*. Outside the compensated temperature range, the maximum error is not defined, however the pressure transmitter still functions.

To prevent mechanical and electrical damage, pressure transmitters may not be deployed beyond the threshold temperature ranges specified in the data sheet.

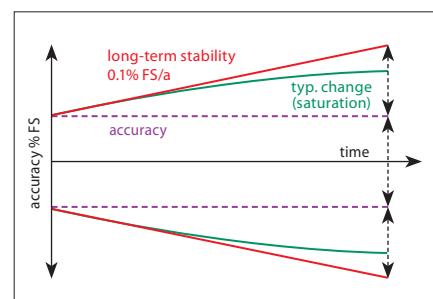

Service life and long-term stability

Service life information pertains to nominal conditions specified in the data sheet, and can vary considerably when a product is operated mechanically or electrically outside the specifications. Service life essentially depends on the used measuring cell technology.

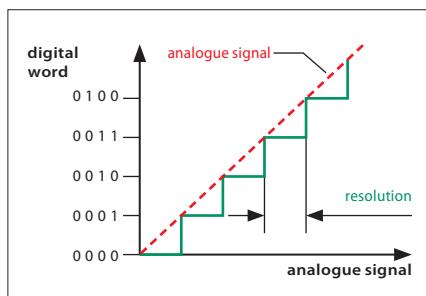

Ageing is accelerated (or slowed) due to different factors - such as temperature, temperature change and reduction of mechanical forces. The occurrence of ageing does effect the total accuracy.

SUCO specifies long-term stability in accordance with DIN 16086 in relation to one year. Typically the influence of aging on the accuracy reduces with increasing operating duration. The information in the data sheet corresponds to the worst case scenario.

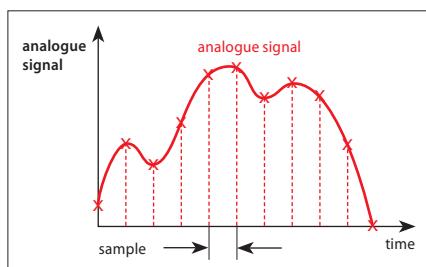

Resolution

The A/D resolution (analogue - digital) of an pressure transmitter defines the smallest change of the analogue – digital – analogue conversion which takes places by the signal processing of an pressure transmitter. If for example 13-bit resolution is used for an pressure transmitter with a 100 bar setting range, the smallest signal change is 8192 steps (2^{13}). As state of the art a resolution of 12 bits and hence 4096 steps (2^{12}) is typical. Therefore pressure changes of 100 bar / 4096 = 0.024 bar can be recorded.

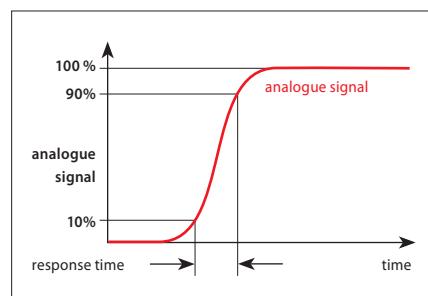

Sampling rate

The sampling rate (or sampling frequency) defines the number of samples per time unit (typically in seconds or milliseconds) taken from an analogue signal and converted to a digital signal. The sampling rate is an indicator of how fast the output signal of a pressure transmitter responds to the pressure change at the input.

Response time

The response or circuit time is shorter than 2 to 4 milliseconds (depending on model). The sum of A/D and D/A conversions, and the analogue and digital filters in the signal chain from the measuring bridge to the output, make up the response time. Filtering is used to suppress unwanted pressure peaks and electrical interference signals, and for good EMC characteristics.

CE mark

Pressure transmitters from SUCO fall under the 2014/30/EU EMC Directive. EC declarations of conformity have been issued for the pressure transmitters are available on request or can be downloaded from our website. The relevant devices are denoted by a CE mark in our catalogue.

The Machinery Directive 2006/42/EC is not applicable, because our products are classed as components.

Our products are designed for Group 2 fluids based upon good engineering practise in line with Pressure Equipment Directive 2014/68/EU, meaning neither a declaration of conformation may be issued nor a CE mark affixed.

Generic standard	Test standard	Parameter(s)
Radio disturbance and immunity	EN 55016-2-1 EN 55016-2-3	60 dBuV
Radiated, high-frequency electromagnetic field immunity test	EN 61000-4-3	10 V/m; 80-2700 MHz, 3 V/m; 1400-2000 MHz, 1 V/m; 2000-2700 MHz
Immunity to conducted disturbances, induced by radio-frequency fields	EN 61000-4-6	10 V; 0.15-80 MHz
Electrical fast transient / burst immunity test	EN 61000-4-4	±2 KV
Surge immunity test	EN 61000-4-5	±0.5 KV (common) ±0.5 KV (differential)
Electrostatic discharge (ESD) immunity test	EN 61000-4-2	air: 8 KV with contact: 4 KV

Electromagnetic compatibility (EMC)

Pressure transmitters from SUCO do comply to all important industrial EMC standards. The basis for the standards are the stricter thresholds for transient emissions in residential environments (EN 61000-6-3) and immunity for industrial environments (EN 61000-6-2).

Technical explanations for pressure transmitters

Conversion chart for pressure units

Abbreviation for unit	Name of unnit	Pa= N/m ²	bar	Torr	lbf/in ² . PSI

1 lbf/in ² = 1 PSI	Pound-force per square inch	6894	0.06894	51.71	1

Conversion chart for temperature units

	K	°C	F
K	1	K-273.15	9/5 K-459.67
°C	°C + 273.15	1	9/5 °C + 32
F	5/9 (F+459.67)	5/9 (F-32)	1

Insulation strength

According to the latest specifications for immunity to surges and lightning protection, the following must be taken into account when testing insulation strength: With insulation test devices having an inner resistance exceeding 42 Ohm, the insulation strength of pressure transmitters can be tested up to 500 VDC. All contacts must be tested short-circuited against the housing. For a specific threshold value of test voltage, the protective circuit for surge protection is activated without any defects arising within the circuit. In the process, the current may rise to a point at which an insulation strength fault is indicated. The recommendation therefore is to conduct the insulation test of the pressure transmitter when it is removed, or independently of the overall system.

Medium compatibility

The specifications on medium compatibility in this catalogue pertain to the specific seal and housing materials as well as the used measuring cell technology and so cannot be generalised.

Titanium

Its high levels of mechanical resistance and the wide media compatibility – in particular to corrosive media – do make titanium the ideal material for measuring cells and membranes. It is not recommended for oxygen or hydrogen applications.

Stainless steel (1.4305 / AISI 303)

Stainless steel with broad level of media compatibility. Also suitable for oxygen and hydrogen applications.

Stainless steel (1.4404 / AISI 316L)

Stainless steel with broad level of media compatibility. Also suitable for chemical industry and sea water applications.

Oxygen and hydrogen

Country-specific safety requirements and application guidelines must be observed if the medium to be monitored is oxygen or hydrogen, such as DGUV accident prevention regulations (DGUV 500, Section 2.32 and BGI 617).

**Please specify when ordering
"for oxygen, oil and grease-free".**

Pressure peak dampening

If required, our pressure transmitters can also be fitted with a pressure snubber (pressure peak orifice) to protect the measuring cell against transient pressure loads such as pressure peaks due to the switching of valves, cavitation effects, etc. which can shorten life expectancy.

For liquid media, the hole of a pressure snubber cannot be chosen to be any small size. At low temperatures the viscosity of the media will increase. In a case of dropping pressure the media might remain in the cavity behind the snubber which might affect the functionality of the pressure transmitter. Thus a bore diameter of 0.8 mm has been established.

Product information

The technical information in this catalogue is based upon fundamental testing during product development, as well as upon empirical values. The information cannot be used for all application scenarios.

Testing of the suitability of our products for a specific application (e.g. also the checking of material compatibilities) falls under the responsibility of the user. It may be the case that suitability can only be guaranteed with appropriate field testing.

Subject to technical changes.

hex 24 Performance

Pressure transmitters, Performance series

hex 24

- Very attractively priced electronic pressure transmitters
- High overpressure protection (up to 2 x)
- Small, compact transmitters
- Broad diversity of electronic and mechanical connection options
- High level of adaptability to your requirements (custom solutions)
- Ceramic sensor in thick film technology
- Housing made of stainless steel (1.4305), others on request

hex 22
Stainless steel
1.4305 / AISI 303

Robust pressure transmitters

Stainless steel housing (1.4305 / AISI 303, SW22)

- Pressure transmitters specially for low pressures, including vacuum applications
- High overpressure protection (up to 3 x)
- Long life time even under high pressure change rates
- Housing and wetted parts are made of stainless steel providing excellent media compatibility
- Suitable for hydrogen and oxygen applications
- The highly-sensitive piezo-resistive sensor in the measuring cell filled with oil guarantees high level of accuracy, repeatability and long-term stability
- The availability of different sealing materials enables deployment in a broad temperature range and with a diverse array of media
- Custom variants (e.g. cleaned for oxygen applications) are available on request

0675 / 0680 / 0690

Order matrix for pressure transmitters

T.3

hex 22
Stainless steel

1.4404 / AISI 316L

	Type	Pressure range	Pressure connection	Seal material	Electrical connection
0.5 – 4.5 V, ratiometric	0675				
0 – 10 V, 3-wire	0680				
4 – 20 mA, 2-wire	0690				

Pressure range	Max. overpressure ¹⁾	
-1 – 0 bar (vacuum approx. -29.6 inHg)	3 bar	000
0 – 1 bar (approx. 14.5 PSI)	3 bar	100
0 – 4 bar (approx. 58 PSI)	8 bar	400
0 – 6 bar (approx. 87 PSI)	12 bar	600
0 – 10 bar (approx. 145 PSI)	20 bar	101
0 – 16 bar (approx. 232 PSI)	32 bar	161
0 – 40 bar (approx. 580 PSI)	80 bar	401
0 – 100 bar (approx. 1,450 PSI)	200 bar	102

Pressure connection	
G 1/4 – DIN EN ISO 1179-2 (DIN 3852-11), form E	41

Seal material – Application areas			
NBR	Hydraulic/machine oil, heating oil, air, nitrogen, water, etc.	-40 °C ... 100 °C (-40 °F ... 212 °F)	1
FKM	Hydraulic fluids (HFA, HFB, HFD), petrol/gasoline, etc.	-20 °C ... 125 °C (-4 °F ... 257 °F)	3

Electrical connection		
DIN EN 175301-803-A (DIN 43650-A); socket device included		013
M 12x1 – DIN EN 61076-2-101 A		002
Bayonet ISO 15170-A1-4.1 (DIN 72585-A1-4.1)		004
Cable connection (length of cable 2 m standard)		011

Order number:	06XX	XXX	41	X	XXX
---------------	-------------	------------	-----------	----------	------------

¹⁾ Static pressure, dynamic pressure 30 to 50% lower. Values refer to the hydraulic or pneumatic part of the pressure transmitter.

Pressure transmitters, High-Performance series

hex 22

- Outstanding overpressure protection (up to 4 x)
- Ideal choice for mobile hydraulic applications
- Long service life even under high pressure change rates
- Wetted parts made of stainless steel and titanium ensuring excellent media compatibility
- All welded design, no elastomeric seal
- Silicon-on-sapphire technology (SoS) for highest reliability, accuracy and reliable process monitoring
- Very low temperature error and very good long-term stability
- Customer specific solutions available on request

Technical details

Type:	0705	0710	0720
Output signal:	0.5 – 4.5 V ratiometric	0 – 10 V (3-wire)	4 – 20 mA (2-wire)
Supply voltage U_B :	5 VDC $\pm 10\%$ max. 6.5 VDC	12 – 32 VDC	10 – 32 VDC
Permissible load/apparent ohmic resistance:	$\geq 4.7 \text{ k}\Omega$	$\geq 4.7 \text{ k}\Omega$	$\leq (U_B - 10 \text{ V}) / 20 \text{ mA}$
Idle power consumption:	approx. 5 mA		

Type:	0705 / 0710 / 0720									
Standard pressure ranges p_{nom} in bar:	0 – 10	0 – 16	0 – 25	0 – 40	0 – 60	0 – 100	0 – 160	0 – 250	0 – 400	0 – 600
Overpressure protection $p_u^{1)}$ in bar:	40	64	100	160	240	400	640	1,000	1,600	1,650
Burst pressure ¹⁾ in bar:	80	128	200	320	480	800	1,280	2,000	2,000	2,000
Mechanical life expectancy:	10,000,000 pulsations at rise rates to 5 bar/ms at p_{nom}									
Permitted pressure change rate:	$\leq 5 \text{ bar/ms}$									
Accuracy:	$\pm 0.5\%$ full scale (FS) at room temperature, $\pm 0.25\%$ BFSL									
Long term stability:	$\pm 0.1\%$ FS p. a.									
Repeatability ²⁾ :	$\pm 0.1\%$ FS									
Temperature error ²⁾ :	$\pm 0.01\%$ FS / °C									
Compensated temperature range:	-40 °C ... +80 °C (-40 °F ... 176 °F)									
Temperature range ambient:	-40 °C ... +100 °C (-40 °F ... 212 °F)									
Temperature range media:	-40 °C ... +125 °C (-40 °F ... 257 °F)									
Wetted parts material:	stainless steel 1.4305 / SAE Grade 303, titanium									
Insulation resistance:	> 100 MΩ (500 VDC, $R_i > 42 \Omega$)									
Response time 10 – 90%:	< 2 ms									
Vibration resistance:	20 g at 4 – 2000 Hz sine wave; DIN EN 60068-2-6									
Shock resistance:	half sine wave 500 m/s ² ; 11ms; DIN EN 60068-2-27									
Protection class	IP67 for M 12x1, DIN 72585 (bayonet) and cable connector IP65 for DIN EN 175301-803									
Electromagnetic compatibility:	EMC 2014/30/EU, EN 61000-6-2, EN 61000-6-3									
Max. length of connection cable:	30 m									
Protection against reverse polarity, short-circuit and overvoltage:	Built-in									
Weight:	approx. 80 g (DIN 175301 approx. 110 g, cable outlet approx. 135 g)									

¹⁾ Static value. Dynamic value is 30 to 50% lower. Values refer to the hydraulic/pneumatic part of the pressure transmitter / transducer.

²⁾ Within the compensated temperature range.

Accessories

- For pressure transmitters with 4 – 20 mA current output
- Connection to DIN EN 175301-803-A (DIN 43650)
- No additional voltage supply required
- Simple installation and programming
- Switching output option available

Technical details

Display:	LED, red, 4-digits, rotatable (4x90°)
Display range:	-999 to 9999
Input signal:	4 – 20 mA, 2-wire
Standard display:	4.00 – 20.00 (pre-set at factory)
Accuracy:	0.2 % FS ±1 digit
Supply voltage:	17 – 32 V DC
Max. loop current:	60 mA
Sampling rate:	300 ms – 25.5 s (configurable with filter)
Switching output (only for 1-6-20-656-008):	PNP transistor output 90 mA (P-MOSFET) Embedded overcurrent protection
Programming:	2 programming buttons are located underneath the removable front panel
Programming options:	
Zero point setting:	-999 ... 9999
Range:	0 ... 9999
Decimal points:	3 positions or disable
Average filter:	0.3 ... 25.5 s
Overrun:	On / off
Switching point (for 1-6-20-656-008):	-999 ... 9999
Switch function (for 1-6-20-656-008):	NO/NC
Save settings:	In EEPROM
Error messages:	If the overrun function is selected, "HI" is shown on the display when 20 mA is exceeded. "LO" is displayed when the current drops below 4 mA. When the overrun function is disabled, "ErC6" is displayed as soon as the value is no longer in range -999 ... 9999.
Temperature range:	-10 °C ... +60 °C
Housing material:	ABS / acrylic (display window)
Protection class	IP65 when fitted
Electrical connection:	DIN EN 175301-803-A (DIN 43650); suitable for connector assignment with order number -001 (such as the 07xx family)
Attachment screw:	Included in the delivery

S. ESI Sensor Technology

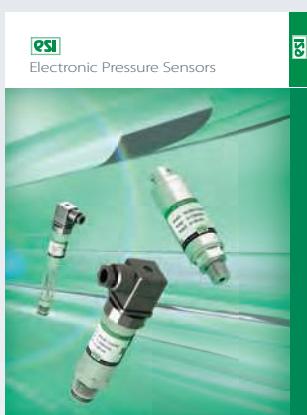

ESI Technology Ltd

The worldwide specialist for customized high precision electronic pressure sensors

For full information please ask for our brochure

For decades, ESI Technology with headquarters in Wrexham (UK) has served its customers with consistent product development, special engineered solutions and outstanding technical service and sales support.

In 2009 ESI Technology Ltd was acquired by SUCO. Since then ESI stands for Electronics, Sensors and Instruments. By forming part of a bigger organisation, yet keeping its own independence, ESI has gained the strength to expand its sales efforts and services worldwide.

ESI Technology has become one of the leading suppliers for specialised pressure sensors by offering bespoke solutions for specific applications.

With a dedicated manufacturing and engineering facility in Wrexham, ESI serves an extensive range of major industries such as Oil and Gas, Subsea, Aerospace, Process, Test and Calibration.

Being one of the key suppliers to these industries requires high performance not only of its products. From design and sourcing through to shipment and customer service, ESI's Management System is approved to

ISO 9001:2008 and ATEX and IECEx approval is available on a wide range of products.

Throughout the product range, ESI uses a variety of state of the art sensor technologies to make each product a perfect fit to the desired application.

Though, the jewel of ESI's sensor technologies is Silicon-on-Sapphire which has redefined the performance capability of pressure monitoring products.

Additional services, such as tailoring of the existing product range to suit application requirements, product conditioning such as ESS (Environmental Stress Screening) and product documentation packaging, make ESI the perfect partner for customers who need a bespoke service.

With a wide sales network, ESI Technology is able to deliver its' special services globally.

If you can't find the suitable solution on the following pages, please do not hesitate to contact the ESI Technology sales team or one of its partners which is always near to you.

We are looking forward to supporting you!

Pressure Sensors Overview

For full information, please ask for our brochure
ESI - Electronic Pressure Sensors

S.1. High-Pressure Transmitter

Pressure Ranges:	0 – 600 bar; 0 – 1,000 bar; 0 – 1,500 bar; 0 – 2,000 bar; 0 – 3,000 bar; 0 – 4,000 bar; (other ranges possible)
Sensor Technology:	Silicon-on-Sapphire (SoS)
Accuracy:	±0.25 % of span BFSL
Output Signal:	10 mV/V or 0 – 5 V or 0 – 10 V or 4 – 20 mA
Wetted Parts:	All titanium, machined from a single piece
Process Connection:	Autoclave F250-C female; M16 x 1.5 female
Option:	ATEX/IECEx (available only for 4 – 20mA), includes mining areas (Group I M1)
Types:	HP1000; HP1001; HP1002; HP1003; HP1011; HP1012; HP1100; HP1101; HP1102; HP1103; HP1111; HP1112

S.2. Low-Pressure Transmitter

Pressure Ranges:	0 – 50 mbar; 0 – 100 mbar; 0 – 250 mbar; 0 – 500 mbar (other ranges possible)
Sensor Technology:	Piezoresistive Silicon Sensor
Accuracy:	±0.5 % of span BFSL
Output Signal:	10 mV/V (typ.) or 0 – 5 V or 0 – 10 V or 4 – 20 mA
Wetted Parts:	Stainless steel (316) with O-ring
Process Connection:	1/4" BSP (G 1/4); 1/2" BSP; 1/4" NPT; 1/2" NPT; (all male) (others on request)
Types:	LP1000; LP1001; LP1002; LP1003; LP1011; LP1012

S.3. High-Precision Pressure Transducer

Pressure Ranges:	0 – 500 mbar to 0 – 1,500 bar
Sensor Technology:	Silicon-on-Sapphire (SoS)
Accuracy:	±0.1 % of span BFSL
Temperature Effects:	±1.0 % FS max. thermal error band over -20 °C ... +70 °C
Output Signal:	10 mV/V (typ.) or 0 – 5 V or 0 – 10 V or
Wetted Parts:	All Titanium
Process Connection:	1/4" BSP (G 1/4); 1/4" NPT; (all male)
Electrical Connection:	MIL-C-26482 6 pin Bayonet or 1 m PTFE cable
Option:	ATEX/IECEx (available only for mV output)
Types:	HI2000; HI2001; HI2002 HI2010; HI2011; HI2012

Pressure Sensors Overview

S.4. High-Temperature Pressure Transmitter

Temperature Ranges:

Media temperature up to 250 °C

Pressure Ranges:

0 – 1 bar up to 0 – 1,500 bar

Output Signal:

mV or 4 – 20 mA

Process Connection:

1/4" BSP (G 1/4); 1/4" NPT; (all male)
or 1/2" BSP flush diaphragm

Electrical Connection:

MIL-C-26482 6 pin Bayonet;
1 m PTFE cable; DIN EN 175301

Option:

ATEX/IECEx

Types:

HI2200; HI2210; HI2300; HI2310; PR3860; PR3861; PR3862

S.5. USB-Transducer

Pressure Ranges:

-1 – 2.5 bar; 0 – 16 bar; 0 – 100 bar; 0 – 400 bar;

0 – 1,500 bar; 0 – 2,000 bar; 0 – 4,000 bar;

Silicon-on-Sapphire (SoS)

±0.15 % of span BFSL

Output Signal:

USB-Interface power supply and data transfer via USB

Wetted Parts:

All titanium

Process Connection:

1/4" BSP (G 1/4); 1/4" NPT; (all male) or
Autoclave F-250-C female;

Electrical Connection:

USB Mini B

Types:

GS4200-USB

S.6. Submersible Depth / Level Pressure Transmitter

Pressure Ranges:

0 – 1 mWG up to 0 – 500 mWG

Accuracy:

±0.3 % of span BFSL

Output Signal:

4 – 20 mA (other options on request)

Electrical Connection:

Vented Cable

Option:

ATEX/IECEx

Types:

PR3420; PR3441; PR3442

S.7. Flush Diaphragm Pressure Transmitter

Pressure Ranges:

0 – 200 mbar up to 0 – 1,000 bar

Sensor Technology:

Thick Film Ceramic Sensor

Accuracy:

±0.3 % of span BFSL

Output Signal:

4 – 20 mA (other options on request)

Wetted Parts:

Stainless steel 316

Process Connection:

1/2" BSP; Pipe-clamp; DIN 11851; (other options on request)

Option:

ATEX/IECEx

Types:

PR3800; PR3801; PR3802; PR3820; PR3821; PR3822;

PR3850; PR3851; PR3852; PR3860; PR3861; PR3862

S.8. Special Solutions

Application Specific Design Solutions
 Customised Housing Design
 Choice of Output Signals and Pressure Ranges
 Specialised Process Connections
 Various Electrical Connectors
 Special Housing Materials

S.9. Oil & Gas and Subsea Solutions

Dual Redundancy (Pressure Sensors and Electronics)
 Hyperbaric Testing to 3000 m Depth
 Environmental Stress Screening (ESS)
 Bespoke Process Connections
 Extended Service life
 Special Housing Materials
 Comprehensive Documentation Package and Certification

S.10. Differential Pressure Transmitter

Pressure Ranges:	0 – 5 mbar up to 0 – 200 bar
Accuracy:	$\pm 0,3\%$ of span BFSL
Output Signal:	4 – 20 mA (other options on request)
Wetted Parts:	Suitable for liquids or gases
Option:	ATEX/IECEx
Types:	PR3200; PR3202; PR3203; PR3204

S.11. Accessories

Panel Meter
 High Temperature Pressure Adapter
 Adapters for Process Connectors

Order correctly – it's quite simple

Explanation of SUCO order numbers

$p_{\max.}$ in bar	Adjustment range in bar	Tolerance in bar at room temperature	Male thread	Order number
-----------------------	----------------------------	---	-------------	--------------

0170 Diaphragm pressure switches with spade terminal

100 ¹⁾	0.3 – 1.5	± 0.2	G 1/4	0170 – 457 03 – X – 003
			M 10x1 con.	0170 – 457 01 – X – 001
			M 12x1.5 cyl.	0170 – 457 02 – X – 002
			NPT 1/8	0170 – 457 04 – X – 318
			NPT 1/4	0170 – 457 09 – X – 314
			7/16-20 UNF	0170 – 457 20 – X – 301
			9/16-18 UNF	0170 – 457 21 – X – 302

Order number:

0170 – 457 04 – X – 318

The first four digits indicate the type number: Our example:
Diaphragm pressure switch with spade terminals, type 0170

By these three digits, the type of construction and the setting range are determined
Our example: overpressure safe up to 100 bar, adjustment range 0.3 – 1.5 bar.

These two digits provide information about the desired thread. Our example: NPT 1/8.

Important - the code for the seal material:

- 1 for NBR (Buna-N): hydraulic fluid, machine oil, heating oil, etc.
- 2 for EPDM: water, brake fluid, ozone, acetylene, etc.
- 3 for FKM: hydraulic fluid, petrol/gasoline, etc.
- 4 for ECO (epichlorhydrin): air, oils, fats, fuels (used only in SUCO vacuum switches).
- 5 for EPDM-W270: drinking water (only in diaphragm, $p_{\max} \leq 35$ bar).
- 7 for TPE: hydraulic fluid, water, machine oil, heating oil, etc.
- 8 for Silicone: water, food products, air, etc. (only in diaphragm, $p_{\max} \leq 35$ bar).
- 9 for HNBR: hydraulic / machine oil, ester-based bio-oils.

The last three digits are reserved for further differentiation of the switch.
In our example: 318

Abbreviated coding explanation is embossed on the hex surface areas of the pressure switches.
