BiTorsion Bits

“Take it easy” tool finder

BiTorsion bits are absolutely premium products. They have a softer BiTorsion zone which reduces the hardness of the shaft by about 20 % in comparison to the drive tip. This means that the peak loads that cause bit breakage and premature wear are absorbed in this zone – something which enhances the service life of the bits.

“Take it easy” tool finder with colour coding according to profiles and size stamp – for simple and rapid accessing of the required tool.
