Disclaimer

For physical injuries and possessions loss caused by those reasons which are not related to product quality, such as operating without following manual guide, natural disasters or force majeure, we take no responsibility for that.

Under the supervision of Seeed Technology Inc., this manual has been compiled and published which covered the latest product description and specification. The content of this manual is subject to change without notice.

The design of this product (including software) and its accessories is under tutelage of laws. Any action to violate relevant right of our product will be penalized through law. Please consciously observe relevant local laws in the use of this product.

1. Introduction

The Q Touch Sensor is a high sensitivity and high noise immunity touch input device. It is based on Atmel AT42QT1070. The AT42QT1070 modulates its bursts in a spread-spectrum fashion in order to heavily suppress the effects of external noise, and to suppress RF emissions. The QT1070 uses a dual-pulse method of acquisition. This provides greater noise immunity and eliminates the need for external sampling capacitors, allowing touch sensing using a single pin.

2. Specification

Operating Voltage:	3 ~ 5.5V
Operating Current	1mA for 3.3V operating voltage
Touch Keys	7 Keys ; key0, key1, key2 are on the Grove PCB bottom side
Communicating Protocol	I2C
I2C Address	0x1B

3. Interface function

- ① : On board touch key0
- ② : On board touch key1
- ③ : On board touch key2
- ④ : Touch key0 ~ key6 break out

The recommended range for key capacitance C_x is 1 pF – 30 pF. Larger values of C_x will give reduced sensitivity.

- ⑤ : GND
- ⑥ : Grove interface

4. Usage

Demo: Who touched my lychee?

Have you ever heard of a lychee? Yes, it's a very famous fruit of south of China. If you have ever tasted, will love it.

Now let's begin our demo. When you touch the hit pan (lychee), the LED will turn on.

4.1 Hardware Connections

1. Connect the I2C of Grove-Q Touch Sensor to the I2C socket on the Grove Base Shield.
2. Connect the Grove-LED to D3 (Digital Pin 3) on the Grove Base Shield.
3. Connect Key0 (marked K0) on the Grove-Q Touch sensor to a Lychee (Alternatively, you could touch the open end of the cable with a finger while testing).

5. Software Part

- 1) Download the library [[Q Touch Library](#)];
- 2) Unzip it into the libraries folder of Arduino IDE, for example the path could be `..\arduino-1.0.5\libraries`.

Example 1:

- a) Open the example via Arduino Menu 'File -> Examples -> Seeed_QTouch-master -> isTouch'.
- b) Upload the code. Note that you should select the correct board type and COM port.
- c) On touching the Lychee, the LED would glow, as can be seen below.

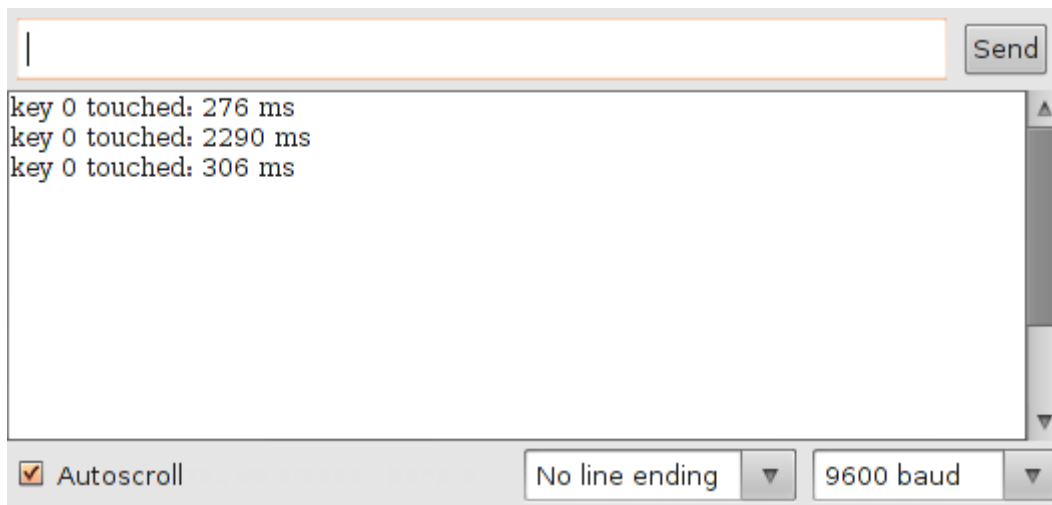

Example 2:

a) Open the example via Arduino Menu 'File > Examples > Seeed_QTouch-master -> Grove_QTouch_demoCode....'

b) Upload the code.

c) Open the Serial Monitor.

d) Touch and release the Lychee; The Serial Monitor would display the duration of touch as in the screenshot below.

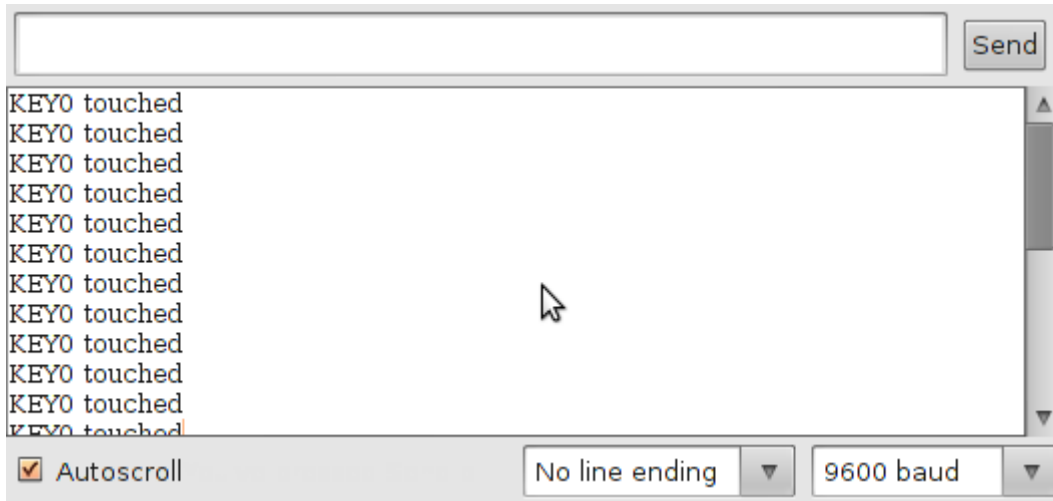

Example 3:

a) Open the example via Arduino Menu File > Examples > Seeed_QTouch-master > getTouchNumber

b) Upload the code.

c) Open the Serial Monitor.

d) On touching the Lychee, the Serial Monitor would display the Key that is connected, as in the screenshot below. One can connect the fruit to any other Key and verify.
