Wiha iTorque.

The intelligent torque tool.

"i" as in "intelligent" - the iTorque

Mechatronic version, highly precise and convenient to use - the intelligent iTorque screwdriver sets new standards in the torque world.

Technology down to the smallest detail

iTorque, superior design from A to Z. Operation could not be simpler or more efficient: the required value on the display is rapidly set with the setting wheel at the handle end, completely without tools.

The digital display impresses with a clear display: no more reading errors, but simple, individual setting options. Especially practical: A short click and all units are switched over according to needs (Nm 1 in.lb) The plastic metal compound handle also convinces: with perceptible ergonomics, high quality robust materials and optimal distribution of soft zones. And of course handle sizes optimally matched to specific torque ranges.

Modern, efficient testing equipment monitoring: All applications count!

iTorque also sets new quality assurance standards. Its integrated counter records all applications and shows their actual number. An integrated alert function promptly reminds the user of the pre-specified calibration cycle that can be individually set with ordering.

And for practical purposes that means:

the calibration interval can be optimally matched to the number of applications according to user and application. Further practical details round off the profile of the all-rounder: with the test equipment marking that cannot be lost and that can be freely specified, each iTorque becomes a unique object. And thanks to the interchangeable blade system the blades of all Wiha torque screwdrivers can be randomly changed.

All in all:

innovative mechatronics paired with sophisticated operating comfort. **The new iTorque.**

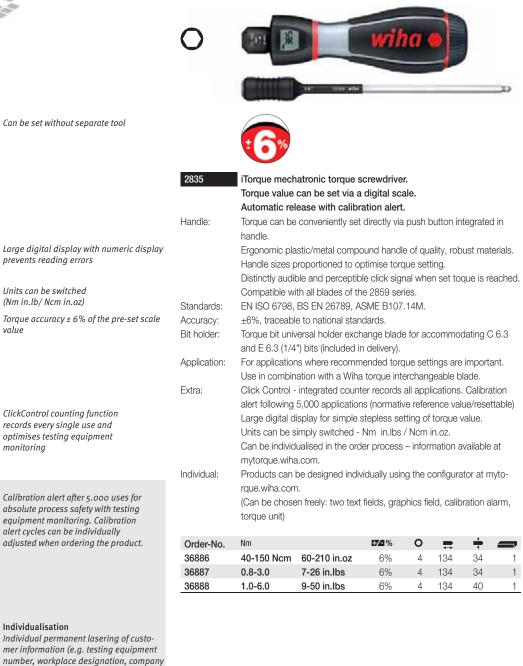

Wiha iTorque.

- Mechatronic technology
- Nm-setting shown on digital display
- Click control
- Display indicates when calibration is necessary
- Release accuracy ±6%

	-			- 3	Enquer Sotter 19:000 August	
2852	Torque value can be set via window scale.					
Handle:	Automatic release. Torque infinitely adjustable with Torque-Setter setting tool (also sup- plied). Ergonomic multi-component handle, particulary light and compact. Handle sizes proportioned to optimise torque setting. Audible and perceptible click when the pre-set torque has been attai- ned.					
Standards: Accuracy: Application:	Compatible with all blades of the 2859 series. EN ISO 6798, BS EN 26789, ASME B107.14M. ±6%, tracing to national standards (see table for other tolerances). For applications where recommended torque settings are important. Use in combination with a Wiha torque interchangeable blade.					
Extra:	Delivered in practical plastic box. Incl. works inspection protocol.					
Note: Individual:	Bit holders or blades are not included in delivery. Products can be designed individually using the configurator at myto- rque.wiha.com. (Can be chosen freely: text field, torque unit)
