

Wiha flag and key handle.

The knack of applying just the right amount of pressure.

Innovative torsion blade in sizes T5 to T10 does not damage the expensive fastening screws or the tool profile.

Screwdrivers with flag or key handles are used whenever replacing indexable inserts on milling heads.

Thanks to the large support area for thumb and index finger, it is possible to loosen or tighten any screw with comfort by applying just the right amount of pressure. These tools are also particularly suitable for high-torque adjustment work.

The small, 7-piece bench stand ensures a tidy working environment.

The flag and key handles have large support surfaces for thumb and index finger for ease of use and efficiency.

Wiha flag and key handle.

- Large support areas for thumb and index finger on the ergonomically shaped handles. The transmission of high torques is thus quite simple
- Cylindrical handle shaft for quick turning of screws
- Innovative torsion blade for T5 to T10 greatly reduces the risk of breakage. Thus, broken profiles in the screw head are largely avoided. If more torque than required is applied, the blade responds elastically (cf. picture)
- Thanks to thin blades, even covered screws in the screw axis can be turned

Wiha flag handle and offset screwdrivers.

For slotted, Phillips and Pozidriv screws.

Slotted offset screwdriver with handle.

Blade: Chrome-vanadium steel, through hardened, chrome-plated.

Standards: DIN 5200.

Application: For working in confined spaces.
