Article No.: 42074

GTIN: 4010995420741

Unit: Piece

Simplifies your work: Comfortable measurement in different work positions thanks to the ingeniously positioned scales, even when viewed from above.

Saves space: Perfectly portable; fits into Wiha cases.

Saves time: Variable distance marks for up to 4 flush boxes.

Increases your efficiency: Both bubbles can be seen easily even from an acute angle.

All too often electricians find it difficult to see the bubble in spirit levels when installing socket outlets in the floor. They may also leave unsightly edges when marking positions due to bubbles shifting as they mark lines. The Wiha electrician's spirit level now puts an end to such problems. Users can see its bubbles perfectly, even from a sharp angle. The spirit level also allows electricians to mark out lines without needing to stop thanks to an end-to-end casing. The ingeniously positioned linear scales ensure users can measure in comfort, even when viewing from above. The variable distance marks for up to four flush socket boxes bring another advantage to electrical installation work. The sliding marking points for boxes allow the spirit level to be adjusted to the marking distances required by local regulations. This means the level can be used in a wide variety of situations, even on an international level. Thanks to its compact dimensions, it is also perfect for portable use and can be stored away in the Wiha electrician's case.

Application: For measuring and marking vertical and horizontal distances between flush boxes.

Total length mm	400 mm
Weight	330 g
Serie	246
Anwendungsszenarien	For measuring and marking vertical and horizontal distances between flush boxes.
Customs tariff number	90318020
Product group	42074
