

## 8-Channel Digital Output Module 24 V DC

Low-side switching, 2-conductor connection

The digital output module provides 8 channels in 2-wire connection at a width of just 12mm (0.47in).

It transmits binary control signals from the automation device to connected actuators (e.g., magnetic valves, contactors, transmitters, relays or other electrical loads).

CAGE CLAMP<sup>®</sup>S terminations provide direct insertion of solid conductors.

A green LED indicates the switched status of each channel.

An optocoupler provides electrical isolation between the bus and the field side.

210-719 operating tool (2.5mm blade) is required to open the CAGE CLAMP<sup>®</sup>S.
