

EE371

Compact Dew Point Temperature Transmitter / Switch

The exact monitoring of dew point temperature in compressed air systems, dryers for plastic and other industrial processes is becoming increasingly more important.

EE371 series with a measuring range $-60...60^{\circ}\text{C Td}$ ($-112...140^{\circ}\text{F Td}$) is the ideal solution for such applications.

The core of the transmitter is the monolithic measurement cell type HMC01, developed by E+E Elektronik in thin-film technology.

An autocalibration procedure which is integrated in the device and years of experience in low humidity adjustment make an accuracy of $<2^{\circ}\text{C Td}$ ($\pm 3.6^{\circ}\text{F Td}$) possible.

The compact construction in a robust aluminium housing and the numerous options allow easy mounting and many application possibilities.

Autocalibration

Dew point temperatures in the range of $-60...-20^{\circ}\text{C}$ ($-76...-4^{\circ}\text{F}$) at room temperature correspond to relative humidity values of $0.08...5.37\% \text{ RH}$. The measurement of these low humidity values is not possible with conventional capacitive measurement methods. For the EE371 series a special autocalibration procedure is utilized to achieve high accuracy measurements at lowest dew points too.

Outputs

Model T: The transmitter has two freely selectable and scaleable outputs for dew point, frost point or ppm volume concentration.

Model S: The switch with two relay outputs is designed for control and alarm purposes. The status for early warning and main alarm is indicated by LED's. Adjustment of the Td/Tf set point and hysteresis can be achieved with the optional configuration software.

Configuration Software

The optional configuration software allows flexible and easy adjustment of the analogue resp. relay outputs to the respective requirements.

The adjustment / calibration of the transmitters can easily be performed.

Screw Connection for Mounting - 360° positionable

The construction of this screw connection enables any position / rotation of the mounted transmitter.

So an optimal position of the display resp. the cable outlet is guaranteed.

Typical Applications

- monitoring of compressed air systems
- refrigerant type dryer
- absorption dryer
- plastics dryer

Features

- measuring range $-60...60^{\circ}\text{C Td}$ ($-76...140^{\circ}\text{F Td}$)
- accuracy of measurement $\pm 2^{\circ}\text{C Td}$ ($\pm 3.6^{\circ}\text{F Td}$)
- two Td/Tf alarm outputs
- autocalibration
- pressure tight up to 100 bar (1450psi)

Basic Sampling Cell

The basic sampling cell offers the possibility to integrate the EE371 into an existing or self-constructed sampling system.
 Pressure range: 0...64 bar (0...928 psi)

- 1 = G 1/2" ISO or 1/2" NPT
- 2 = G 1/4" ISO or 1/4" NPT
- 3 = G 1/4" ISO or 1/4" NPT

Sampling Cell with Quick Connector

The sampling cell is specially developed for use in compressed air lines and has a quick-connector suitable for standard compressed air connections. It allows for the cell to be fitted and removed without interrupting the process. The flow of gas can be adjusted using a bleed screw.
 Pressure range: 0...10 bar (0...145 psi)

- 1 = G 1/2" ISO
- 2 = Bleed screw
- 3 = Quick connector
