

## SparkFun Infrared Control Kit

Infrared remotes are still the cheapest way to wirelessly control a device. This remote is designed to be small, simple, and low-cost. Intended for projects that only need a few buttons.

The infrared remote control offers buttons for four directions, power, select, and three optional use buttons (labelled "A," "B," and "C") and works with many of the more common IR receiver ICs.

This kit includes an IR remote control, a couple of infrared receivers, some resistors, and even some IR LEDs. Using this kit, you can control your Arduino with the included remote control, or use the receiver and LEDs to communicate from one board to another. You can even use your own remote control, or use the kit to control your TV or stereo!

Kit includes:

- Infrared Remote Control
- CR2025 Coin Cell Battery
- 2x IR Receivers
- 2x IR LEDs
- 25x 330 Ohm Resistors
