THE ERGO REVOLUTION

When aiming to reach high performance, you have focus not only on greater power, but also on the efficiency. Aerodynamics is the motion of air that interacts with a moving object, something that gave inspiration to the new series of Bahco ERGO™ knives.

This is a product that goes beyond the cutting, where the design is equally important to the functionality as you use it in your everyday work. Imagine air that smoothly cuts around an object's body. In the same way we visualized the hand firmly gripping the knife and gave them a streamlined shape to provide comfort to the hand when working with repetitive motions. In addition, the design is adapted for varied positions and grips for both dragging and pushing pressure which increases the results from the efforts put in and eases the work.

Bahco ERGO™ knives are non compromising products that combine functionality and design and guarantee great cutting with a firm and comfortable grip.

NEW BAHCO UTILITY KNIVES

B&C-0943-ENG

ergo

Bahco's first ever ERGO™ tool was launched in 1982. Ever since we believe it is important to adapt tools to the potential and limitations of human anatomy, instead of expecting people to adapt to our tools. We believe in putting the right tools in the hands of professional users, making their work more efficient, effective, less tiring, mitigating injury and more fun!

In the past three decades we have already launched over 550 ERGO™ tools now adding our latest innovation: the Bahco ERGO™ utility knives!

Ergonomic tools are designed to fit the human hand, minimizing grip-strength demands and allowing muscles to relax periodically, reducing the risk of static muscle fatigue. So whenever an ERGO™ tool is being developed efficiency, reliability and durability in challenging environments are considered. We value safety and prevent risks of both immediate and long-term injuries and pain. Pride and pleasure are also taken into account, making our ergonomic tools attractive and giving the user greater control, comfort and precision. Bahco innovates continuously!

To develop the ideal utility knife we performed over 150 user tests with more than 50 prototypes. In the tradition of hand-saws, pliers, screwdrivers, scrapers and adjustable wrenches we proudly present our new ERGO™ utility knives.

The Bahco ERGO™ Process is in accordance with ISO 9241. All three new Bahco ERGO™ knives are compliant to 9241-210:2010*

* Ergonomics of human-system interaction - Part 210: Human-centered design for interactive systems.

▶ ERGO™ UTILITY KNIFE

Integrated button for smooth action and to shift blade in three distinct positions

Curved handle for wide variety of grips

Smart button to replace blades
