¹⁾ without Lasertip

Why do some Wera screwdrivers have a gold tip?

Some Kraftform Plus screwdrivers can do more than other similar products. The Lasertip prevents the screwdriver from slipping out of the screw and the holding function of TORX® screwdrivers holds the screw on the screwdriver like a third hand.

These Wera Kraftform Plus screwdrivers have gold tips for easy identification.

334 Slotted Screwdriver

Lasertip

Application: For slotted screws

Blade: Round

Design: Mat nickel, Lasertip

Handle: Kraftform with anti-roll protection, multi-component, sizes: 2.0 x 12.0; 2.5 x 14.0 Kraftform with anti-roll protection, Weralit II, one component

¹⁾ without Lasertip

How can I prevent the screwdriver from slipping out of the screw?

Screwdrivers can easily slip out of the screw, sometimes damaging expensive or important surfaces. The tip of Wera Lasertip screwdrivers has been microscopically roughened by a laser. This rough surface literally "bites" into the head of the screw. Accidental slipping becomes a thing of the past.

Wera products are available from MARYLAND METRICS

TORX® with holding function

The optimised profile wedges the screw to the tool. This is very important in situations where a magnetic screw holder cannot or must not be used (for instance, jobs involving power tools where metal filings attracted by a magnet could affect the screwdriving process, or jobs requiring wedging forces and stainless steel tools, which are non-magnetic because of the nature of the material). The wedging effect can be guaranteed only for tools made to Acument Global Technologies Inc. specifications.

Kraftform Micro Series

The first-class electronic screwdriver.

2035 Electronics Screwdriver for slotted screws

Application: Slotted screws
Blade: Round
Design: Mat nickel, Black Point
Handle: Kraftform Micro with anti-roll protection and rotating cap, multi-component

How can I hold my TORX® screw securely on the screwdriver?

The electronic TORX® HF screwdriver with holding function literally presses the screw onto the screwdriver. The conical driving flanks that taper toward the tip of the tool, the optimised flank base and the ideal engage depth hold the screw securely on the blade.

2067 Electronics TORX® Screwdriver

Application: TORX® socket screws

Blade: Round

Design: Mat nickel, Black Point

Handle: Kraftform Micro with anti-roll protection and rotating cap, multi-component

TORX®

TORX® drive profiles transfer torque between tool and screw by line or surface contact rather than point contact as many other profiles. This protects both the screw and the tool profile. It also increases the amount of torque and power that can be transferred.

TORX® with borehole

TORX® tools with a borehole prevent the unauthorised unfastening of safety screws. The screws contain a pin that protrudes into the drive profile so that "normal" TORX® tools cannot be used. This pin fits into the borehole of TORX® BO tools allowing safety screws to be unfastened.

Kraftform Micro Series

The first-class electronic screwdriver.

2067 Electronics TORX PLUS® Screwdriver

Application: For TORX PLUS® socket screws
Blade: Round
Design: Mat nickel, Black Point
Handle: Kraftform Micro with anti-roll protection and rotating cap, multi-component

Rapidaptor Bit Holder

For rapid bit changes.

3888/4/1 K Rapidaptor Universal Bit Holder, stainless

Application: Suitable for $\frac{1}{4}$ " DIN 3126-C 6,3 and E 6,3 (ISO 1173) hexagon insert bits and Wera Series 1 and 4

Design: Rapidaptor easy-in, easy-out, rapid-spin, chuck-all, and single-hand technology

Drive: $\frac{1}{4}$ " hexagon suitable for power tools with DIN 3126-F 6,3, ISO 1173 receiver

|-------------|-----------------|----|-----|
| 05071100003 | $\frac{1}{4}$ " | 50 | 2" |

897/4 R BiTorsion Universal Bit Holder

Application: Suitable for $\frac{1}{4}$ " DIN 3126-C 6,3 und E 6,3 (ISO 1173) hexagon insert bits and Wera Series 1 and 4

Design: BiTorsion for long service life, Rapidaptor rapid-in, rapid-out, rapid-spin, chuck-all, and single-hand technology

Drive: $\frac{1}{4}$ " hexagon suitable for power tools with DIN 3126-F 6,3, ISO 1173 receiver

| Code | mm | mm | Box |
|-------------|-----------------|----|-----|
| 05053923007 | $\frac{1}{4}$ " | 75 | 3" |

How do I prevent extraneous rust when working with stainless steel?

Stainless steel does not rust. However, if conventional steel tools are used on stainless steel elements or stainless steel screws the wear debris of these tools can adhere to the surface and begin to rust. This effect, known as extraneous rust, can impair the visual impact and even cause structural damage, resulting in high costs for the necessary repair work.

Wear debris that causes extraneous rust can be prevented through the use of stainless steel tools.

How can I change bits as quickly and safely as possible?

With the Wera Rapidaptor, $\frac{1}{4}$ " bits can be inserted and automatically locked in the holder without using the slide switch. Even the smallest bits are easily removed by sliding the sleeve forward. The free-spinning outer sleeve stabilizes battery or mains-powered tools during the screwdriving process. All functions can be carried out with just one hand. There is no faster bit change!

Universal Bit Holder with Stainless Steel Sleeve

With strong magnet for secure hold.

893/4/1 K Universal Bit Holder

Application: Suitable for $\frac{1}{4}$ " DIN 3126-C 6,3 (ISO 1173) hexagon insert bits and Wera Series 1

Bit Holders and Adaptors

For a secure connection.

Rapidaptor

The Rapidaptor combines five significant product advantages (Rapid-in, Rapid-out, Rapid-spin, Chuck-all, Single-hand) for more safety and productivity when screwdriving.

The BiTorsion holder has a Torsion zone, which helps to reduce the impact of damaging load peaks as well.

The combined use of both the BiTorsion bit and holder increases the service life of the tools considerably.
