

Samsung HB890 and 690 Series

Slim, adaptable, cost-effective displays designed for premium hospitality environments

Highlights

- Create a sophisticated viewing environment with the premium luxury design of streamlined LED displays
- Offer an upgraded guest experience with wireless connection to personal devices
- Customize important hotel content using the Samsung LYNK™ SINC Internet Protocol (IP) network
- Protect content with Samsung LYNK™ Digital Rights Management (DRM) technology
- Offer a wide range of channel selections with the built-in DVB-T2/C/S2 tuner
- Control expenditures with energy-saving features

Create an enhanced in-room entertainment experience

Owners and managers of premium hotels want to provide the superior-quality in-room experience that sophisticated travelers expect. Yet, the cost of IP-based equipment and interactive solutions can be prohibitive. In addition, many premium TVs on the market provide a varied selection of features, but include an interface that is difficult to use.

Samsung HB890 and 690 Series displays are integrated, high-performing TVs that include many desirable features and an interface designed for ease of use. These displays contribute to a pleasant room ambiance and superior viewing experience because of their slim, streamlined design. With smart connectivity features, the screens offer myriad entertainment options for guests. Hotel staff members can customize the welcome menu with a straightforward interface. Additionally, hotels can stay on budget with affordable content-streaming options and other cost-saving features.

Upgrade premium hotel suites with superior display design

HB890 and 690 Series displays are designed especially for 5-star hotel suites. The displays feature a full metal frame and stand for an elevated level of sophistication to enhance the ambiance of high-end hotel rooms.

HB890 and 690 Series displays feature large format display (LFD) LED technology that yields an ultra-thin profile, at just 49.5 mm (1.95 in.) for the HB690 and 34.9 mm (1.37 in.) for the HB890. These displays are one-third the thickness of traditional cold cathode fluorescent lighting (CCFL) displays. The slim profile enables the displays to fit into tight hotel room spaces.

The displays also feature a narrow, 12 mm (0.47 in.) bezel. Without a cumbersome frame, the displays virtually blend into the background, allowing guests to focus on the images projected rather than the equipment delivering them.

Figure 2. HB690 design

Wireless, information and channel options satisfy guest requirements.

Expand flexibility with guest display options

HB890 and 690 Series displays transform a guest room TV into a multidevice entertainment hub with the following included applications:

Soft AP

Soft AP provides a software access point (AP) or hot spot. Up to four devices can connect wirelessly to the AP, and guests can adjust the signal level and change channels to suit their needs.

AllShare

AllShare technology, powered by Digital Living Network Alliance (DLNA), enables guests to play personal content through a wireless connection on their room TV. Content includes movies, photos and music.

Smart View

Smart View software provides a ready connection for guests' mobile devices. The application allows TV screen mirroring technology with an application through Wi-Fi service. Using this application, guests can view content on the TV with their own mobile devices. Compatible devices now include the Samsung GALAXY S II. Future compatible devices are expected to include the GALAXY Tab 7.0 Plus and the Apple® iPhone® and iPad® with iOS v4, v5 and v6.

Tailor a welcome screen to suit the hotel and its guests

With the LYNK™ SINC application, hotel staff can provide a customized display menu for guests. For example, the menu can offer Hotel Info, Hotel Services, Local Info and Events sections. LYNK™ SINC includes three user interface (UI) templates so hotel personnel can choose the one that works best for the hotel's clientele. The UI is highly flexible, with transparency and background images. The LYNK™ SINC application offers the following features:

- Customized service for groups or individuals
- TV monitoring and management
- Internet protocol TV (IPTV) live multicast

The application also supports Samsung Smart Hub, which enables hotels to download widgets and deliver customized content to guests.

LYNK™ SINC helps reduce total cost of ownership (TCO) because no set-top box (STB) is needed. Also, the solution is not dependent on a system integrator (SI). In addition, no maintenance fee is required and installation costs are low. Guests can use the simplified system to access tourist guidance, weather and other useful information. They can also access popular social media sites, such as Facebook™, Twitter™ and YouTube™.

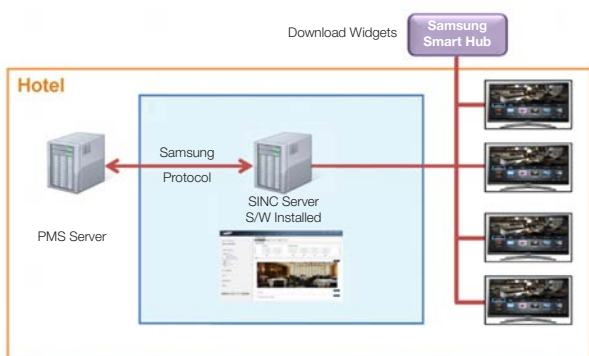

Figure 3. Samsung LYNK™ SINC is a well-organized solution for ordering and serving content to hotel room displays.

SINC 2.1

- SINC Server provides Hotel Widgets

Enable TV installation without Internet Connection

Figure 4. SINC 2.1 includes a library of widgets so users can choose and install applications without an Internet connection.

Wireless, information and channel options satisfy guest requirements.

Reduce costs and improve security with robust DRM technology

Samsung LYNK™ DRM technology provides hoteliers with a protected and cost-effective alternative to traditional hardware-based content protection systems. The solution allows encrypted content to pass safely and to display on hotel TVs.

A software-only implementation, LYNK™ DRM technology reduces the need for additional equipment and provides quicker recovery for Conditional Access System (CAS) problems. Enhanced functions include a support video on demand (VoD) system. To help ensure reliability of the system, coverage extends to the enlargement of head-end equipment for cable operators.

Offer guests a wide variety of channel selections

The built-in DVB-T2/C/S2 tuner is a Quad tuner that delivers multiple channels directly to hotel TVs without the need for a head-end system. The displays also support multiple satellite inputs from Digital Satellite Equipment Control (DiSEqC). This system lowers TCO by eliminating the need to purchase head-end devices for satellite and terrestrial channels.

It also enhances the guest experience by enabling guests to enjoy a variable range of high-definition (HD) satellite and terrestrial TV channels.

Improve the bottom line with energy-efficient features

Samsung HB890 and 690 Series offers many features to help businesses save energy and reduce costs. The LED displays are cost-effective because they use less energy, emit less carbon dioxide (CO₂) and require less maintenance than conventional hospitality displays. Additionally, the displays are built with fewer harmful materials than cold-cathode fluorescent lamps (CCFLs), so manufacturing and recycling processes are more efficient and environmentally friendly.

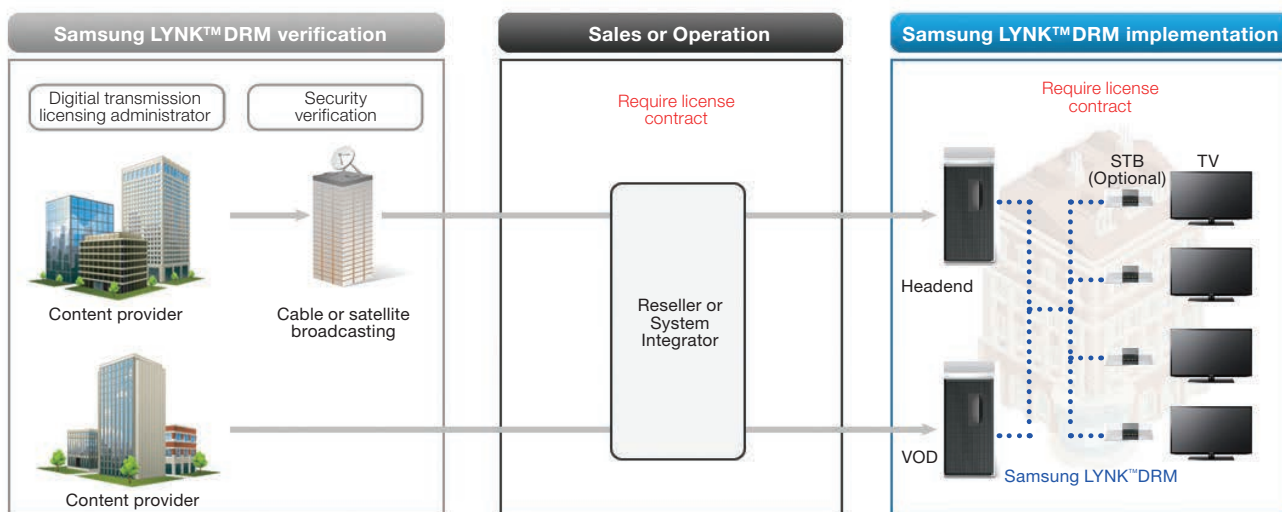

Figure 5. Samsung LYNK™ DRM provides powerful security functions with more flexibility.

About Samsung Electronics Co., Ltd.

Samsung Electronics Co., Ltd. is a global leader in semiconductor, telecommunication, digital media and digital convergence technologies with 2011 consolidated sales of US\$143.1 billion. Employing approximately 227,000 people in 197 offices across 75 countries, the company operates three separate organizations to coordinate its 10 independent business units: Consumer Electronics (CE), comprising Visual Display, Home Appliances, Printing Solution, and Health and Medical Equipment; Information Technology and Mobile Communications (IM), including Mobile Communications, Network, and Digital Imaging; and Device Solutions (DS), consisting of Memory, System LSI, and LED. Recognized for its industry-leading performance across a range of economic, environmental and social criteria, Samsung Electronics was named the world's most sustainable technology company in the 2011 Dow Jones Sustainability Index.
