FU8300

Secvest 2WAY Wireless Panic Alarm Button

The Secvest 2WAY wireless panic alarm button is a detector of the Secvest (or the Terxon with a wireless expansion module). By pressing the button, you can easily and discreetly trigger a robbery alarm if you need help. The wireless panic alarm button is taught−in with the Secvest as a zone with "robbery" property. This zone is monitored and the button will trigger an alarm even when the control panel is disarmed. In the system settings of the Secvest you can determine whether it is a local or silent alarm. Some ideal locations for the wireless panic button would be bedrooms, entrances and under a shop
counter.

Product highlights:

- Convenient flush−mounting
- Triggers a silent alarm
- Material made of thermoplastics
- Tamper monitoring
- Coverage up to 50 meters
