

FU8403

Wireless Display Module

The wireless display module provides a quick overview of the status of the Secvest detectors in the house. You can see at a glance whether a detector or a window is open or closed. The module has a convenient status display for the FTS 96 E wireless window protection system and the Secvest wireless magnetic contact detectors – even in stand-alone mode without the alarm panel. However, if the window protection systems are operated in combination with a Secvest 2WAY, the display module is an important supplement: window protection system and wireless magnetic contact detectors can be taught-in to the display module and the alarm panel at the same time.

Product highlights:

- Compatible with the FTS 96 E wireless window protection system and Secvest wireless magnetic contact detectors
- 2 LEDs for status display
- 16 display channels to be configured individually
