*Read instruction manual carefully, before using the power supply unit.

=NOTES=

*1. At 100VAC/200VAC, Ta=25°C, nominal output voltage and maximum output power.

*2. For cases where conformance to various safety specs (UL, CSA, EN) are required, to be described as 100 - 240VAC(50 - 60Hz).

*3. Not applicable for the inrush current to Noise Filter for less than 0.2ms.

*4. Measure with JEITA RC-9131B probe, Bandwidth of scope :100MHz.
For start up at low ambient temperature and low input voltage, output ripple noise might not meet specification.
However, specification can be met after one second.

*5. 85 - 265VAC, constant load.

*6. No load-Full load, constant input voltage.

*7. Hiccup with automatic recovery. Avoid to operate at over load or short circuit condition.

*8. OVP circuit will shut down output, manual reset (Re power on).

*9. Measured by the each measuring method of UL, CSA, EN and Den-an (at 60Hz), Ta=25°C.

*10. Output Derating
- Derating at standard mounting. Refer to OUTPUT DERATING CURVE (A256-01-02/HD-_).
- Load (%) is percent of maximum output power or maximum output current, do not exceed its derating of maximum load.
- For conditions of start up at -40°C to -10°C, refer to derating curve (A256-01-03/HD-_).

*11. Category 4 exposure levels : Track transportation over U.S. highways, Composite two-wheeled trailer.

*12. The power supply is considered a component which will be installed into a final equipment.
The final equipment should be re-evaluated that it meets EMC directives.

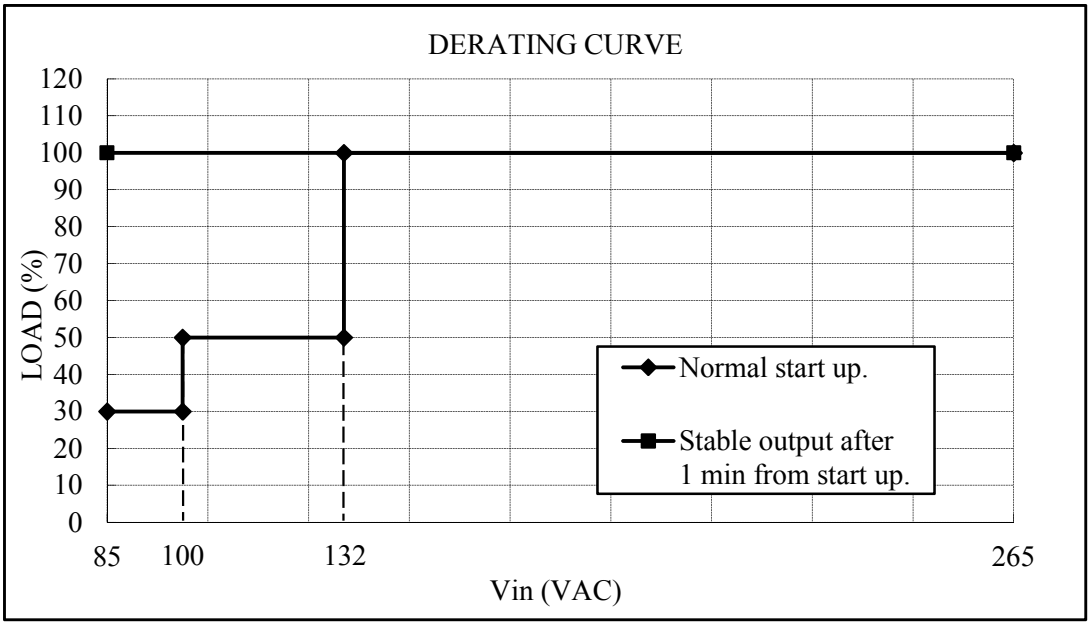
100 ≤ Vin < 132	50	100
132 ≤ Vin ≤ 265	100	100



=NOTES=

*At Ta : -40 to -10°C.

*Input voltage : Not gradual start up.

*Do not use the load that is constant current mode.

*Avoid forced air cooling. It is assumed that inside of power supply is heated by self-heating within 1 minutes.

*No condensing.

*Pay attention to above items before using the unit. Incorrect usage could lead to unstable output voltage.
