

ISO308x Isolated 5-V Full- and Half-Duplex RS-485 Transceivers

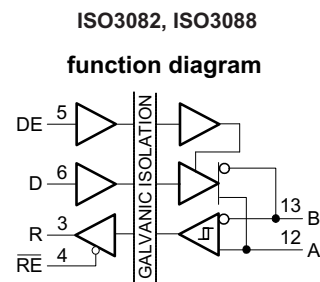

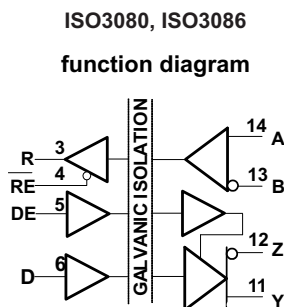

1 Features

- Meets or Exceeds TIA/EIA RS-485 Requirements
- Signaling Rates up to 20 Mbps
- 1/8 Unit Load – Up to 256 Nodes on a Bus
- Thermal Shutdown Protection
- Low Bus Capacitance – 16 pF (Typical)
- 50 kV/μs Typical Transient Immunity
- Fail-safe Receiver for Bus Open, Short, Idle
- 3.3-V Inputs are 5-V Tolerant
- Bus-Pin ESD Protection
 - 12 kV HBM Between Bus Pins and GND2
 - 6 kV HBM Between Bus Pins and GND1
- Safety and Regulatory Approvals
 - 4000- V_{PK} Basic Insulation, 560 V_{PK} V_{IORM} per DIN V VDE V 0884-10 (VDE V 0884-10): 2006-12 and DIN EN 61010-1
 - 2500 V_{RMS} Isolation per UL 1577
 - 4000 V_{PK} Isolation per CSA Component Acceptance Notice 5A and IEC 60950-1

2 Applications

- Security Systems
- Chemical Production
- Factory Automation
- Motor and Motion Control
- HVAC and Building Automation Networks
- Networked Security Stations

4 Simplified Schematics

3 Description

The ISO3080 and ISO3086 devices are isolated full-duplex differential line drivers and receivers while the ISO3082 and ISO3088 devices are isolated half-duplex differential line transceivers for TIA/EIA 485/422 applications.

These devices are ideal for long transmission lines because the ground loop is broken to allow for a much larger common-mode voltage range. The symmetrical isolation barrier of the device is tested to provide 2500 V_{rms} of isolation for 60s per UL 1577 between the bus-line transceiver and the logic-level interface.

Any cabled I/O can be subjected to electrical noise transients from various sources. These noise transients can cause damage to the transceiver and/or nearby sensitive circuitry if they are of sufficient magnitude and duration. These isolated devices can significantly increase protection and reduce the risk of damage to expensive control circuits.

The ISO3080, ISO3082, ISO3086, and ISO3088 are qualified for use from -40°C to 85°C .

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
ISO3080	SOIC (16)	10.30 mm × 7.50 mm
ISO3082		
ISO3086		
ISO3088		

(1) For all available packages, see the orderable addendum at the end of the data sheet.

5 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision E (September 2011) to Revision F	Page
• Added <i>ESD Rating</i> table, <i>Thermal Information</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section	1
• Changed <i>Features</i> list item From: IEC 60747-5-2 (VDE 0884, Rev. 2) To: DIN V VDE V 0884-10 (VDE V 0884-10): 2006-12	1
• VDE standard changed to DIN V VDE V 0884-10 (VDE V 0884-10):2006-12	1
• Changed the IEC 60664-1 Ratings Table. Basic isolation group SPECIFICATION entry From: IIIa To: II	15

Changes from Revision D (January 2011) to Revision E	Page
• Changed <i>Features</i> list item From: 16 kV HBM To: 12 kV HBM	1
• Changed ESD HBM spec value from ± 16 to ± 12	5

Changes from Revision C (October 2009) to Revision D	Page
• Added T_{STG} row to the <i>Absolute Maximum Ratings</i> ⁽¹⁾	5
• Added "Dynamic" conditions to <i>Recommended Operating Conditions</i> V_{ID} spec with reference to Figure 9	5
• Changed for 3 V to 3.3 V in note 1 of the recommended operating table.....	5
• Deleted $V_I = V_{CCI}$ or 0 V from CMTI spec. Conditions statement. Added "Figure 13".....	6
• Changed top row, UNIT column, split into 2 rows, top row μ s and second row ns.....	7
• Added Figure 9	8
• Added note to bottom of first page of the Parameter Measurement information	10
• Changed File Number from '1698195' to '220991' in Regulatory Information table.....	15
• Changed θ_{JA} from 212 ° C/W to 168 ° C/W in conditions statement for I_S spec.; and MAX current from 210 mA to 157 mA	16
• Changed graph for " DW-16 θ_{JC} Thermal Derating Curve per IEC 60747-5-2 " , Figure 23	16
• Added Footnotes to Driver Function Table and Receiver Function Table	16

Changes from Revision B (December 2008) to Revision C	Page
• Changed <i>Recommended Operating Conditions</i> table note From: For 3-V operation, V_{CC1} or V_{CC2} is specified from 3.15 V to 3.6V. To: For 3-V operation, V_{CC1} is specified from 3.15 V to 3.6V.....	5

Changes from Revision A (June 2008) to Revision B	Page
• Changed <i>Features</i> bullet From: 4000- V_{PEAK} Isolation, To: 4000- V_{PEAK} Isolation,, 560- V_{PEAK} V_{IORM}	1
• Added	1
• Added the CSA column to the Regulatory Information table.....	15

Changes from Original (May 2008) to Revision A	Page
• Deleted the CSA column from the Regulatory Information Table.	15
• Changed the file number in the VDE column of the Regulatory Information table From: 40014131 To: 40016131.....	15

6 Device Comparison Table

DEVICE	RATED ISOLATION ⁽¹⁾	TYPE	DATA RATE
ISO3080	4000 V _{PK} / 2500 V _{RMS}	Full-duplex	200 kbps
ISO3086	4000 V _{PK} / 2500 V _{RMS}	Full-duplex	20 Mbps
ISO3082	4000 V _{PK} / 2500 V _{RMS}	Half-duplex	200 kbps
ISO3088	4000 V _{PK} / 2500 V _{RMS}	Half-duplex	20 Mbps

(1) See the [Regulatory Information](#) table for detailed isolation ratings.

Pin Functions

NAME	PIN		I/O	DESCRIPTION
	ISO3080, ISO3086	ISO3082, ISO3088		
A	14	--	I	Receiver noninverting input on the bus-side
	--	12	I/O	Transceiver noninverting Input or Output (I/O) on the bus-side
B	13	--	I	Receiver inverting Input on the bus-side
	--	13	I/O	Transceiver inverting Input or Output (I/O) on the bus-side
D	6	6	I	Driver Input
DE	5	5	I	Enables (when High) or Disables (when Low or Open) Driver output of ISO308x
GND1	2, 7, 8	2, 7, 8	–	Ground connection for V _{CC1}
GND2	9, 10, 15	9, 10, 15	–	Ground connection for V _{CC2}
NC	--	11, 14	–	No Connect
R	3	3	O	Receiver Output
\overline{RE}	4	4	I	Disables (when High or Open) or Enables (when Low) Receiver Output of ISO308x
V _{CC1}	1	1	–	Power supply, V _{CC1}
V _{CC2}	16	16	–	Power supply, V _{CC2}
Y	11	--	O	Driver noninverting output
Z	12	--	O	Driver inverting output

8 Specifications

8.1 Absolute Maximum Ratings⁽¹⁾

		MIN	MAX	UNIT
V_{CC}	Input supply voltage, ⁽²⁾ V_{CC1} , V_{CC2}	-0.3	6	V
V_O	Voltage at any bus I/O terminal	-9	14	V
V_{IT}	Voltage input, transient pulse, A, B, Y, and Z (through 100 Ω , see Figure 20)	-50	50	V
V_I	Voltage input at any D, DE or \overline{RE} terminal	-0.5	7	V
I_O	Receiver output current		± 10	mA
T_J	Maximum junction temperature		150	°C
T_{stg}	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values except differential I/O bus voltages are with respect to network ground terminal and are peak voltage values

8.2 ESD Ratings

		VALUE	UNIT		
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾	Bus pins and GND1	± 6000	V
			Bus pins and GND2	± 12000	
			All pins	± 4000	
	Charged device model (CDM), per JEDEC specification JESD22-C101, all pins ⁽²⁾	All pins	± 200	V	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

8.3 Recommended Operating Conditions

		MIN	TYP	MAX	UNIT	
V_{CC1}	Logic-side supply voltage ⁽¹⁾	3.15		5.5	V	
V_{CC2}	Bus-side supply voltage ⁽¹⁾	4.5	5	5.5	V	
V_{OC}	Voltage at either bus I/O terminal	A, B		-7	12	V
V_{IH}	High-level input voltage	D, DE, \overline{RE}		2	V_{CC}	V
V_{IL}	Low-level input voltage			0	0.8	
V_{ID}	Differential input voltage	A with respect to B		-12	12	V
		Dynamic (ISO3086)		see Figure 9		
R_L	Differential input resistance		54	60	Ω	
I_O	Output current	Driver		-60	60	mA
		Receiver		-8	8	
T_A	Ambient temperature		-40		85	°C

- (1) For 5-V operation, V_{CC1} or V_{CC2} is specified from 4.5 V to 5.5 V. For 3.3-V operation, V_{CC1} is specified from 3.15 V to 3.6 V.

8.4 Thermal Information

THERMAL METRIC ⁽¹⁾		ISO308x		UNIT	
		DW			
		16 PINS			
R _{θJA}	Junction-to-ambient thermal resistance	Low-K thermal resistance ⁽²⁾		168	°C/W
		High-K thermal resistance		79.6	
R _{θJC(top)}	Junction-to-case (top) thermal resistance			39.7	°C/W
R _{θJB}	Junction-to-board thermal resistance			44.7	°C/W
ψ _{JT}	Junction-to-top characterization parameter			11.8	°C/W
ψ _{JB}	Junction-to-board characterization parameter			44.0	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance			n/a	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

(2) Tested in accordance with the Low-K or High-K thermal metric definitions of EIA/JESD51-3 for leaded surface mount packages.

8.5 Electrical Characteristics: Driver

over recommended operating conditions (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT		
V _{OD}	I _O = 0 mA, no load	3	4.3	V _{CC}	V		
	R _L = 54 Ω, See Figure 10	1.5	2.3				
	R _L = 100 Ω (RS-422), See Figure 10	2	2.3				
	V _{test} from -7 V to +12 V, See Figure 11	1.5					
Δ V _{OD}	Change in magnitude of the differential output voltage	See Figure 10 and Figure 11	-0.2	0	0.2	V	
V _{OC(SS)}	Steady-state common-mode output voltage	See Figure 12	1	2.6	3	V	
ΔV _{OC(SS)}	Change in steady-state common-mode output voltage		-0.1		0.1		
V _{OC(pp)}	Peak-to-peak common-mode output voltage	See Figure 12		0.5	V		
I _I	Input current	D, DE, V _I at 0 V or V _{CC1}		-10	10	μA	
I _{OZ}	High-impedance state output current	ISO3082 ISO3088	See receiver input current			μA	
		ISO3080 ISO3086	V _Y or V _Z = 12 V, V _{CC} = 0 V or 5 V, DE = 0 V	Other input at 0 V	1		
		V _Y or V _Z = -7 V, V _{CC} = 0 V or 5 V, DE = 0 V			-1		
I _{OS}	Short-circuit output current	V _A or V _B at -7 V		Other input at 0 V	-200	200	mA
		V _A or V _B at 12 V					
CMTI	Common-mode transient immunity	See Figure 21 and Figure 22		25	50	kV/μs	

8.6 Electrical Characteristics: Receiver

over recommended operating conditions (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT		
V _{IT(+)}	Positive-going input threshold voltage	I _O = -8 mA		-85	-10	mV	
V _{IT(-)}	Negative-going input threshold voltage	I _O = 8 mA		-200	-115	mV	
V _{hys}	Hysteresis voltage (V _{IT+} - V _{IT-})			30		mV	
V _{OH}	High-level output voltage	V _{ID} = 200 mV, I _O = -8 mA, See Figure 16	3.3-V V _{CC1}	V _{CC1} -0.4	3.1	V	
			5-V V _{CC1}	4	4.8		
V _{OL}	Low-level output voltage	V _{ID} = -200 mV, I _O = 8 mA, See Figure 16	3.3-V V _{CC1}		0.15	0.4	V
			5-V V _{CC1}		0.15	0.4	

Electrical Characteristics: Receiver (continued)

over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$I_{O(Z)}$	High-impedance state output current	$V_I = -7$ to 12 V, Other input = 0 V	-1		1	μ A
I_I	Bus input current	V_A or $V_B = 12$ V		0.04	0.1	mA
		V_A or $V_B = 12$ V, $V_{CC} = 0$		0.06	0.13	
		V_A or $V_B = -7$ V	Other input at 0 V	-0.1	-0.04	
		V_A or $V_B = -7$ V, $V_{CC} = 0$		-0.05	-0.03	
I_{IH}	High-level input current, \overline{RE}	$V_{IH} = 2$ V	-10		10	μ A
I_{IL}	Low-level input current, \overline{RE}	$V_{IL} = 0.8$ V	-10		10	μ A
R_{ID}	Differential input resistance	A, B	48			k Ω
C_D	Differential input capacitance	Test input signal is a 1.5 MHz sine wave with 1Vpp amplitude. C_D is measured across A and B.		7		pF

8.7 Supply Current

over recommended operating condition (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
I_{CC1}	Logic-side supply current	\overline{RE} at 0 V or V_{CC} , DE at 0 V or V_{CC1}			8	mA
		\overline{RE} at 0 V or V_{CC} , DE at 0 V or V_{CC1}	3.3-V V_{CC1}		10	
I_{CC2}	Bus-side supply current	\overline{RE} at 0 V or V_{CC} , DE at 0 V, No load			15	mA

8.8 Switching Characteristics: Driver

over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{PLH} , t_{PHL}	Propagation delay	ISO3080/82		0.7	1.3	μ s
		ISO3086/88		25	45	ns
PWD ⁽¹⁾	Pulse skew ($ t_{PHL} - t_{PLH} $)	ISO3080/82	See Figure 13	20	200	ns
		ISO3086/88		3	7.5	
t_r , t_f	Differential output signal rise and fall time	ISO3080/82		0.5	0.9	μ s
		ISO3086/88		7	15	ns
t_{PZH} , t_{PZL}	Propagation delay, high-impedance-to-high-level output	ISO3080/82	See Figure 14 and Figure 15, DE at 0 V	2.5	7	μ s
	Propagation delay, high-impedance-to-low-level output	ISO3086/88		1.8	55	
t_{PHZ} , t_{PLZ}	Propagation delay, high-level-to-high-impedance output	ISO3080/82		95	225	ns
	Propagation delay, low-level to high-impedance output	ISO3086/88		25	55	

(1) Also known as pulse skew

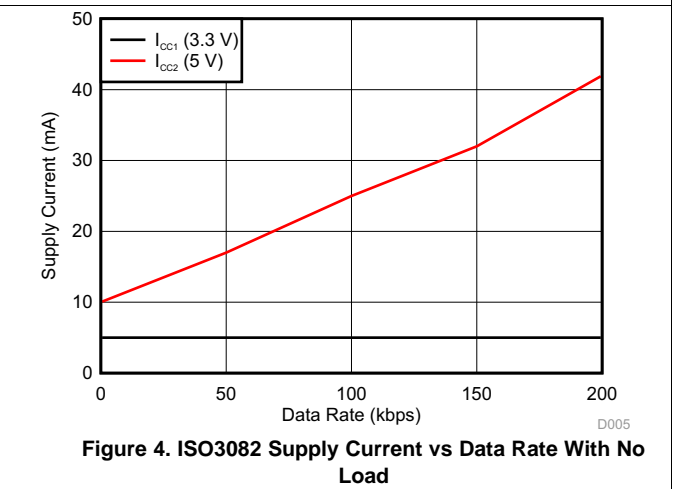

8.9 Switching Characteristics: Receiver

over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{PLH} , t_{PHL}	Propagation delay	See Figure 17		90	125	ns
PWD ⁽¹⁾	Pulse width distortion $ t_{PHL} - t_{PLH} $		4	12		
t_r , t_f	Output signal rise and fall time		1			
t_{PHZ} , t_{PZH}	Propagation delay, high-level-to-high-impedance output Propagation delay, high-impedance-to-high-level output	See Figure 18, DE at 0 V			22	ns
t_{PZL} , t_{PLZ}	Propagation delay, high-impedance-to-low-level output Propagation delay, low-level-to-high-impedance output	See Figure 19, DE at 0 V			22	ns

(1) Also known as pulse skew.

10 Detailed Description

10.1 Overview

The ISO3080, and ISO3086 are isolated full-duplex differential line drivers and receivers while the ISO3082, and ISO3088 are isolated half-duplex differential line transceivers for TIA/EIA 485/422 applications. They are rated to provide galvanic isolation of up to 2500 V_{rms} for 60 sec as per the standard. They have active-high driver enables and active-low receiver enables to control the data flow. They are available in two speed grades suitable for data transmission up to 200 kbps and 20 Mbps.

When the driver enable pin, DE, is logic high, the differential outputs Y and Z follow the logic states at data input D. A logic high at D causes Y to turn high and Z to turn low. In this case the differential output voltage defined as $V_{OD} = V_{(Y)} - V_{(Z)}$ is positive. When D is low, the output states reverse, Z turns high, Y becomes low, and V_{OD} is negative. When DE is low, both outputs turn high-impedance. In this condition the logic state at D is irrelevant. The DE pin has an internal pulldown resistor to ground, thus when left open the driver is disabled (high-impedance) by default. The D pin has an internal pullup resistor to V_{CC} , thus, when left open while the driver is enabled, output Y turns high and Z turns low.

When the receiver enable pin, RE, is logic low, the receiver is enabled. When the differential input voltage defined as $V_{ID} = V_{(A)} - V_{(B)}$ is positive and higher than the positive input threshold, V_{IT+} , the receiver output, R, turns high. When V_{ID} is negative and less than the negative and lower than the negative input threshold, V_{IT-} , the receiver output, R, turns low. If V_{ID} is between V_{IT+} and V_{IT-} the output is indeterminate. When RE is logic high or left open, the receiver output is high-impedance and the magnitude and polarity of V_{ID} are irrelevant. Internal biasing of the receiver inputs causes the output to go failsafe-high when the transceiver is disconnected from the bus (open-circuit), the bus lines are shorted (short-circuit), or the bus is not actively driven (idle bus).

10.2 Functional Block Diagram

ISO3080, ISO3086
function diagram

ISO3082, ISO3088
function diagram

10.3 Feature Description

10.3.1 Insulation and Safety-Related Package Characteristics

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
L(I01)	Minimum air gap (Clearance) ⁽¹⁾	Shortest terminal-to-terminal distance through air	8.34			mm
L(I02)	Minimum external tracking (Creepage) ⁽¹⁾	Shortest terminal-to-terminal distance across the package surface	8.1			mm
CTI	Tracking resistance (Comparative Tracking Index)	DIN IEC 60112 / VDE 0303 Part 1	≥400			V
	Minimum internal gap (Internal Clearance)	Distance through the insulation	0.008			mm
R _{IO}	Isolation resistance	Input to output, V _{IO} = 500 V, TA = 25°C, all pins on each side of the barrier tied together creating a 2-terminal device		>10 ¹²		Ω
C _{IO}	Barrier capacitance input to output	V _I = 0.4 sin (4E6πt)		2		pF
C _I	Input capacitance to ground	V _I = 0.4 sin (4E6πt)		2		pF

(1) Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed-circuit-board (PCB) do not reduce this distance. Creepage and clearance on a PCB become equal according to the measurement techniques shown in the Isolation Glossary. Techniques such as inserting grooves and/or ribs on a PCB are used to help increase these specifications.

10.3.2 DIN V VDE V 0884-10 Insulation Characteristics ⁽²⁾

over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	SPECIFICATION	UNIT
V _{IOTM}	Transient overvoltage	Method a, t = 60 s, Qualification test	4000	V
V _{IORM}	Maximum working insulation voltage		560	V
V _{PR}	Input to output test voltage	Method b1, V _{PR} = V _{IORM} × 1.875, 100% Production test with t = 1 s, Partial discharge < 5 pC	1050	V
R _S	Insulation resistance	V _{IO} = 500 V at T _S	>10 ⁹	Ω
	Pollution degree		2	

(2) Climatic Classification 40/125/21

10.3.3 IEC 60664-1 Ratings Table

PARAMETER	TEST CONDITIONS	SPECIFICATION
Basic isolation group	Material group	II
Installation classification	Rated mains voltage ≤ 150 V _{RMS}	I-IV
	Rated mains voltage ≤ 300 V _{RMS}	I-III
	Rated mains voltage ≤ 400 V _{RMS}	I-II

10.3.4 Regulatory Information

VDE	CSA	UL
Certified according to DIN V VDE V 0884-10 (VDE V 0884-10):2006-12	Approved under CSA Component Acceptance Notice 5A and IEC 60950-1	Recognized under UL 1577 Component Recognition Program ⁽¹⁾
Basic insulation, 4000 V _{PK} Maximum transient overvoltage, 560 V _{PK} Maximum working voltage	4000 V _{PK} Isolation rating, 560 V _{PK} Basic working voltage per CSA 60950-1-07 and IEC 60950-1 (2nd Ed)	Single Protection, 2500 V _{RMS}
Certificate number: 40016131	Master contract number: 220991	File number: E181974

(1) Production tested ≥3000 V_{RMS} for 1 second in accordance with UL 1577.

10.3.5 Safety Limiting Values

Safety limiting intends to prevent potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the I/O can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier potentially leading to secondary system failures.

PARAMETER		MIN	TYP	MAX	UNIT
I_S	Safety input, output, or supply current	DW-16		286	mA
T_S	Maximum case temperature	DW-16		150	°C

The safety-limiting constraint is the absolute maximum junction temperature specified in the absolute maximum ratings table. The power dissipation and junction-to-air thermal impedance of the device installed in the application hardware determines the junction temperature. The assumed junction-to-air thermal resistance in the [Thermal Information](#) table is that of a device installed in a High-Effective Thermal Conductivity Test Board for Leaded Surface Mount Packages. The power is the recommended maximum input voltage times the current. The junction temperature is then the ambient temperature plus the power times the junction-to-air thermal resistance.

11 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

11.1 Application Information

The ISO308x family consists of RS-485 transceivers commonly used for asynchronous data transmissions. Full-duplex implementation requires two signal pairs (four wires), and allows each node to transmit data on one pair while simultaneously receiving data on the other pair. For half-duplex transmission, only one pair is shared for both transmission and reception of data. To eliminate line reflections, each cable end is terminated with a termination resistor, $R(T)$, whose value matches the characteristic impedance, Z_0 , of the cable. This method, known as parallel termination, allows for higher data rates over longer cable length.

11.2 Typical Application

Figure 25. Half-Duplex Transceiver Configurations

Figure 26. Typical RS-485 Network With Full-Duplex Transceivers

Typical Application (continued)

11.2.1 Design Requirements

RS-485 is a robust electrical standard suitable for long-distance networking that may be used in a wide range of applications with varying requirements, such as distance, data rate, and number of nodes.

Table 3. Design Parameters

PARAMETER	VALUE
Pullup and Pulldown Resistors	1 k Ω to 10 k Ω
Decoupling Capacitors	100 nF

11.2.2 Detailed Design Procedure

There is an inverse relationship between data rate and cable length, which means the higher the data rate, the shorter the cable length; and conversely, the lower the data rate, the longer the cable length. When connecting a node to the bus, the distance between the transceiver inputs and the cable trunk, known as the stub, should be as short as possible. Stubs present a nonterminated piece of bus line which can introduce reflections as the length of the stub increases. As a general guideline, the electrical length, or round-trip delay, of a stub should be less than one-tenth of the rise time of the driver. The RS-485 standard specifies that a compliant driver must be able to driver 32 unit loads (ULs), where 1 UL represents a load impedance of approximately 12 k Ω . Because the ISO308x family consists of 1/8 UL transceivers, connecting up to 256 receivers to the bus is possible.

11.2.3 Application Curves

Figure 27. ISO308x Output

12 Power Supply Recommendations

To ensure reliable operation at all data rates and supply voltages, a 0.1- μ F bypass capacitor is recommended at input and output supply pins (V_{CC1} and V_{CC2}). The capacitors should be placed as close to the supply pins as possible. If only a single primary-side power supply is available in an application, isolated power can be generated for the secondary-side with the help of a transformer driver such as TI's SN6501. For such applications, detailed power supply design and transformer selection recommendations are available in SN6501 data sheet ([SLLSEA0](#)).

13 Layout

13.1 Layout Guidelines

On-chip IEC-ESD protection is good for laboratory and portable equipment but never sufficient for EFT and surge transients occurring in industrial environments. Therefore robust and reliable bus node design requires the use of external transient protection devices. Because ESD and EFT transients have a wide frequency bandwidth from approximately 3-MHz to 3-GHz, high-frequency layout techniques must be applied during PCB design. A minimum of four layers is required to accomplish a low EMI PCB design (see [Figure 28](#)).

- Layer stacking should be in the following order (top-to-bottom): high-speed signal layer, ground plane, power plane and low-frequency signal layer.
- Place the protection circuitry close to the bus connector to prevent noise transients from penetrating your board.
- Use VCC and ground planes to provide low-inductance. High-frequency currents might follow the path of least inductance and not necessarily the path of least resistance.
- Design the protection components into the direction of the signal path. Do not force the transient currents to divert from the signal path to reach the protection device.
- Apply 100-nF to 220-nF bypass capacitors as close as possible to the VCC-pins of transceiver, UART, controller ICs on the board (see [Figure 41](#)).
- Use at least two vias for VCC and ground connections of bypass capacitors and protection devices to minimize effective via-inductance (see [Figure 41](#)).
- Use 1-k Ω to 10-k Ω pullup and pulldown resistors for enable lines to limit noise currents in these lines during transient events (see [Figure 41](#)).
- Insert pulse-proof resistors into the A and B bus lines if the TVS clamping voltage is higher than the specified maximum voltage of the transceiver bus pins. These resistors limit the residual clamping current into the transceiver and prevent it from latching up (see [Figure 41](#)).
- While pure TVS protection is sufficient for surge transients up to 1 kV, higher transients require metal-oxide varistors (MOVs) which reduce the transients to a few hundred volts of clamping voltage, and transient blocking units (TBUs) that limit transient current to less than 1 mA.
- Routing the high-speed traces on the top layer avoids the use of vias (and the introduction of their inductances) and allows for clean interconnects between the isolator and the transmitter and receiver circuits of the data link.
- Placing a solid ground plane next to the high-speed signal layer establishes controlled impedance for transmission line interconnects and provides an excellent low-inductance path for the return current flow.
- Placing the power plane next to the ground plane creates additional high-frequency bypass capacitance of approximately 100 pF/in².
- Routing the slower speed control signals on the bottom layer allows for greater flexibility as these signal links usually have margin to tolerate discontinuities such as vias.

If an additional supply voltage plane or signal layer is needed, add a second power and ground plane system to the stack to keep it symmetrical. This makes the stack mechanically stable and prevents it from warping. Also the power and ground plane of each power system can be placed closer together, thus increasing the high-frequency bypass capacitance significantly.

Layout Guidelines (continued)
NOTE

Note: For detailed layout recommendations, see Application Note *Digital Isolator Design Guide*, [SLLA284](#).

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

 - F. Board assembly site may have different recommendations for stencil design.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
