NTE74LS158 Integrated Circuit TTL – Quad 2-Line-to-1-Line Data Selector/Demultiplexer

Description:

The NTE74LS158 is a quad 1-line-to-4-line data selector/multiplexer in a 16-Lead plastic DIP type package that contains inverters and drivers to supply full on-chip data selection to the four output gates. A separate strobe input is provided. A 4-bit word is selected from one of two sources and is routed to the four outputs. The NTE74LS158 presents inverted data outputs to minimize propagation delay time.

Features:

- Buffered Inputs and Outputs

Applications:

- Expand Any Data Input Point
- Multiplex Dual Data Buses
- Generate Four Functions of Two variables (One Variable is Common)
- Source Programmable Counters

Absolute Maximum Ratings: (Note 1)
