

Centrifugal Fans

direct driven
with scroll

Issue 1.3
November 2012

NICOTRA||Gebhardt
fan|tastic solutions

The overall picture will decide

Complete systems by Nicotra Gebhardt

Depending on the model of the fan, the efficiency grade "N" set in accordance with the ErP Directive must be achieved from 2013 and 2015 respectively.

Efficiency grade "N" to ErP-Directive

Year	Centrifugal fans with backward curved blades			Centrifugal fans with forward curved blades		
	without housing static	with housing static	total	with housing static	total	

The efficiency grade designates a parameter in the calculation of the target energy efficiency of a fan depending on the electric input power when operating at the optimal energy efficiency point. The figure of parameter "N" corresponds to the target energy efficiency with a power of 10 kW.

To make the selection easier for our customers, we offer complete systems as defined by the ErP Directive!

In order to compare the systems, the total efficiency η_e of the fan without speed regulation is considered.

η_e = Total efficiency
 $P_{u(s)}$ = Fan gas power when operating at the optimal energy efficiency point
 P_e = Electric input power when operating at the optimal energy efficiency point

If the system has speed regulation, it will be taken into account with the "part load compensation factor" C_c (see below):

P_{ed} = Input power of speed regulator when operating at the optimal energy efficiency point
 C_c = part load compensation factor

- ▶ without speed regulation: $C_c = 1$
- ▶ with speed regulation $P_{ed} \geq 5$ kW: $C_c = 1.04$
- ▶ with speed regulation $P_{ed} < 5$ kW: $C_c = -0.03 \ln(P_{ed}) + 1.088$

In order to take the speed regulation into account via the part load compensation factor C_c , the following mathematical losses arise in accordance with the formula prescribed by ErP for the following typical motor powers:

- ▶ $P_{ed} = 4.00$ kW: $C_c = 1.05$ (5 %)
- ▶ $P_{ed} = 2.20$ kW: $C_c = 1.06$ (6 %)
- ▶ $P_{ed} = 0.75$ kW: $C_c = 1.10$ (10 %)

Nicotra Gebhardt can supply complete systems in all product categories which meet the ErP requirements. We offer highly efficient fan systems

- ▶ with matching components and "high efficiency drives" – belt and direct drive.
- ▶ with integrated or external control to regulate speed.
- ▶ with IEC standard motors (IE2) or internal rotor motors with brushless DC technology.
- ▶ and with AC external rotor motors or brushless DC external rotor motors.

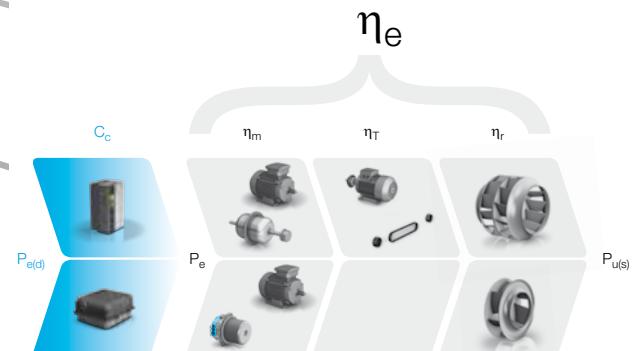

Building blocks for best values

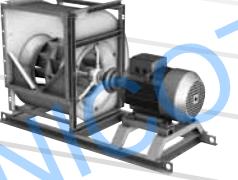

Thanks to the decades-long experience of Nicotra Gebhardt all the components of our fans contribute to their high performance.

Impellers and blades are optimised for turbulence and therefore particularly efficient. An example: With the latest development, the RLM Evo impeller, the free-running centrifugal fans of Nicotra Gebhardt achieve system efficiency grades never reached before.

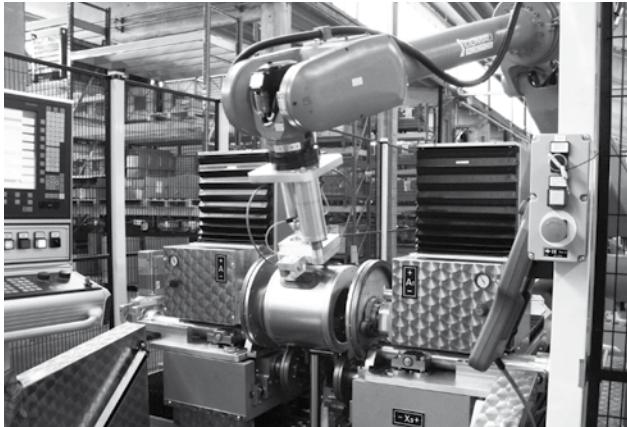

In addition, the brushless DC drives which Nicotra Gebhardt offers for its direct drive fans improve the system efficiency grades.

The fan technology of Nicotra Gebhardt delivers highly efficient systems for all applications.

proSELECTA II

Simple and reliable selection

proSELECTA II is a technical selection program that allows you to configure your own individually designed fan. It provides you with the opportunity to choose from the entire range of fan types and their associated options.

The result from proSELECTA II is the provision of all the technical data for your fan, including sound level data, dimension specifications and accessories. Apart from that, as a registered user, your purchase prices are provided. Additionally fully dimensioned drawings in dxf format are available, which can be downloaded and transferred straight into your CAD system.

So that you can be sure. Models and options that are technically not permissible, are automatically excluded in proSELECTA II. So there is no chance that you will configure a "wrong" device option.

You can register as a proSELECTA II user with us, which enables us to offer you faster order processing. What this means for you is:

- ▶ The complete configuration of your fan with its associated system accessories and belt drive layout.
- ▶ The possibility to produce fans that operate via a frequency inverter.
- ▶ The option of saving your own fan configuration on our server.
- ▶ The opportunity to modify your saved configuration, even over the phone to your Nicotra Gebhardt representative.

High performance centrifugal fans DDM

double width, double inlet, (DWDI),
with built-in, optimised external rotor motor,
made of galvanised sheet steel;
available in various models;
Impeller with forward curved blades of galvanised steel plate

DDM

High performance centrifugal fans DDMB

double width, double inlet, (DWDI),
with built-in, brushless DC external rotor motor and external commutation unit,
made of galvanised sheet steel;
available in various models;
Impeller with forward curved blades of galvanised steel plate

DDMB

High performance centrifugal fans DD

double width, double inlet, (DWDI),
built-in, optimised internal rotor motor,
made of galvanised sheet steel;
available in various models;
Impeller with forward curved blades of galvanised steel plate

DD

High performance centrifugal fans RZA rotavent

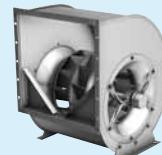

double inlet,
with built-in, low-slip external rotor motor,
made of galvanised sheet steel or welded and coated,
with multi position feet and connecting flange at discharge;
Impeller with true aerofoil blades, welded and painted – system rotavent

RZA

High performance centrifugal fans RZP rotavent

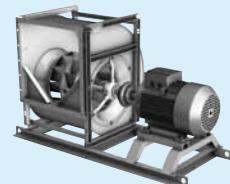

double inlet,
with built-in, brushless DC external rotor motor and external commutation unit,
made of galvanised sheet steel;
with multi position feet and connecting flange at discharge;
Impeller with true aerofoil blades, welded and painted – system rotavent

RZP

High performance centrifugal fans RZM rotavent

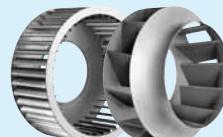

double inlet,
fan with directly coupled motor fitted on pedestal and base frame,
made of galvanised sheet steel with heavy duty reinforced side frame,
connecting flange at discharge,
Impeller with true aerofoil blades, welded and painted – system rotavent

RZM

High performance centrifugal fans REM/TEM

single inlet, with flanged IEC standard motor out of air stream,
in unterschiedlichen Ausführungsvarianten,
Impeller with true aerofoil blades, welded and painted (REM)
or forward curved blades of galvanised steel plate (TEM),
with or without pedestal for horizontal or vertical mounting

Technical
Description

The best fan for your application!

DDM range – direct driven fans

Direct driven centrifugal fans of DDM range with forward curved impeller directly mounted on the external rotor motor are the ideal solution for your applications in the HVAC business.

The fact of manufacturing by ourselves each fan component – the casing, the impeller and motor – enables us to create fans that perfectly meet the requirements of high performances and low power consumptions.

The wide range of different versions and motor types allows you to find the fan exactly matching what you really need.

You anyway get the generally recognized advantages of the direct drive technology :

- **Maintenance free**
- **No transmission losses**
- **Long fan life time**
- **High reliability**
- **Low operating costs**

And, more, all the additional product advantages of the DDM range are at your fingertips.

Compact casing

Aerodynamically optimized in terms of both airflow and design, scrolls are made of galvanized steel and automatically assembled using an innovative procedure, providing a sturdy and long-lasting product.

- **without welding points for no corrosion troubles**
- **high precision manufacturing process for high quality product**

Real forward curved impeller

The impeller has been optimized for the best efficiency, match to the special motor features.

We manufacture the high performance impellers through a highly – automated and innovative production process.

- **low noise level**
- **low power consumption**

Optimized external rotor motor

The fan impeller is directly mounted on the motor thus providing efficient motor cooling by the fan airflow.

Motor speed can be adjusted either by the use of transformers and TRIAC regulators. Motors are generally fitted with thermal protector for protection against overheating.

- **high reliability and efficiency**
- **wide range of operative conditions**

Vibration isolation

The vibration isolation pads of the motor shaft ensures a very low noise during fan operation and no transmission of noise and vibrations to the other parts of the fan, making installation more quiet and comfortable.

- **low noise level**
- **no noise and vibrations transmitted to the surrounding structures**

Easy electrical connection

All fans could be provided with connection box, terminal block or loose cable.

A wiring diagram sticker, placed on each fan, describes the correct electrical connection.

- **fast and easy wiring**
- **safe operation**

Program overview:

DDM range

This kind of fans are specially conceived for use in dust-free environments, at temperatures up to +40°C, or higher on selected models. The performance data have been obtained in a laboratory registered by AMCA for AMCA 210/99 air performance testing. Data are not certified by AMCA.

Fan range DDM

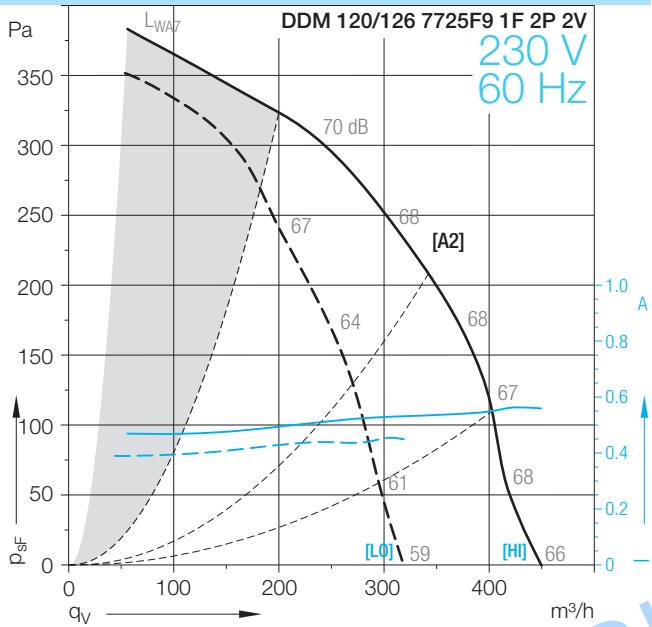

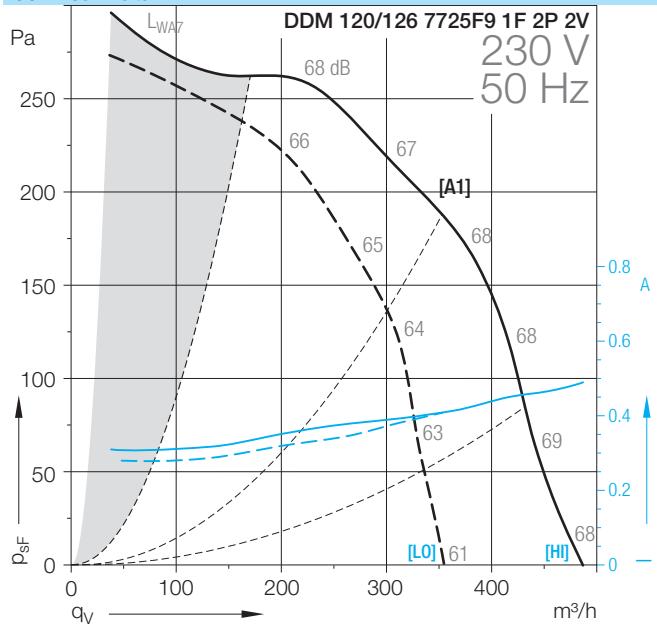

- Impeller size (width and diameter) up to 15"
- Speed variation either by step-transformers or stepless
- External rotor motor with integrated thermal protector
- Fan models suitable for 60Hz supply are available
- Air Flow up to 12,000m³/h
- Static pressure up to 800Pa

The variety of DDM

We have the right fan for all your application!

Many different sizes, versions and motor types are available in the DDM range.

Version	Description	Figure
DDM	Lap-jointed scroll made from galvanized steel and forward curved blades impeller directly mounted on an external rotor motor.	
+SCT	with terminal box mounted

DDM

Specifications

High performance centrifugal fan DDM

Double width, double inlet (DWI), direct driven forward curved blades fan. Lap-jointed scroll of galvanized steel (EN 10142) assembled through a high technology roller-lock seaming for fan sizes 7 inches and larger, spot-welded scroll of Sendzimir galvanized steel for smaller sizes. Straight cut off plate at fan outlet.

Impeller with forward curved blades of galvanized steel, directly mounted on an "External Rotor" motor for optimal motor cooling and no transmission losses.

Open (IP10/IP20) or closed (IP32/IP44/IP54/IP55) motor frame;

Motors may be single or three-phase, single or multiple speed, speed-adjustable by voltage regulation through transformers or TRIAC regulators. Motors suitable for use at 50Hz or 60Hz are available. Built-in thermal protection devices either in series or wired out is standard fit.

Maintenance free self-aligning ball bearings, vibration isolation pads.

Impeller dynamically balanced in class 6.3, according to ISO 1940.

Different fan options and accessories, motor types and sizes available - see technical data.

Fan data

Fan type
Volume flow	q_v	m³/h
Static pressure	p_{sf}	Pa
Air density at fan inlet	ρ_1	kg/m³
Air temperature	t	°C
Max. power consumption	P_e	kW
Speed	N	1/min
Frequency	f	Hz
Sound power level (A weighted)	L_{WA}	dB
Weight	m	kg

Terminal box

Each fan is equipped with a loose cable, a terminal strip or a terminal box (see specific catalog data for details)

The terminal box is commonly fitted to the side plate of the fan. It is made of plastic material and provided with cable glands. A schematic diagram, always provided with the fan, displays the proper electrical connection.

Dimensions in mm, subject to change.

Protection guards

Inlet or outlet protection guards are available as accessories from size 7/7 to 10/10, for bigger sizes and for further information, please contact Nicotra Gebhardt technical department.

Fittings / Accessories

Increased corrosion protection

Nicotra Gebhardt fans are provided – as a standard equipment – with a highly efficient corrosion protection but, in the event of extremely high corrosion risk, additional corrosion protections might be required.

Following to the application and corrosion stress conditions, special coatings of various types and thickness can be supplied on request.

RVM - Single-phase manual regulator

Electronical speed control unit producing a stepless modulated output voltage for fans with speed controlled single phase motors

Execution

Casing made of impact resistant plastic.

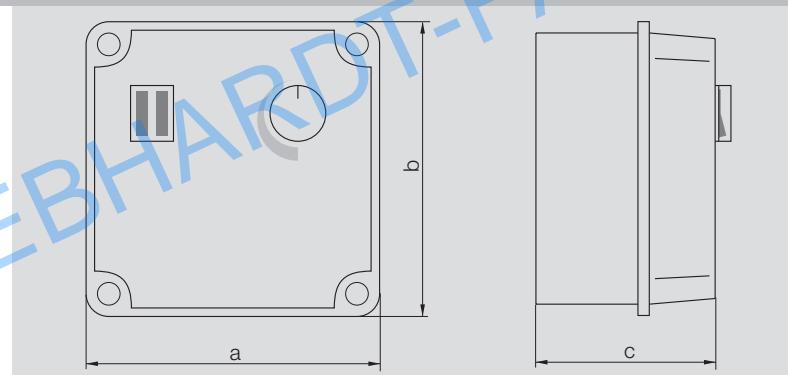

Function

The speed controller is equipped with an EMC-filter, a turning knob for speed control starting at a fixed rpm-value, an operation indicating light (RVM 5I, RVM 9I, RVM 20I), and an internal fuse protection.

Wiring Diagram

RTV - Three-phase manual regulator

Electronical speed control unit producing a stepless modulated output voltage for fans with speed controlled three phase motors.

Execution

Plastic casing with cast aluminium base plate, IP54 protection class.

Function

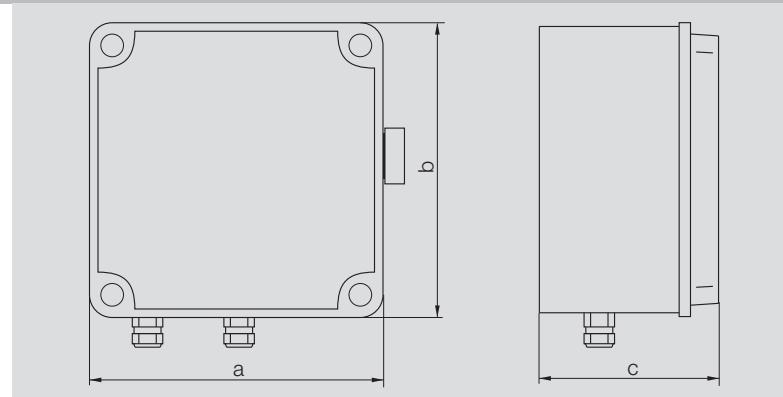

With the control unit a setting of the minimum speed value as well as the maximum speed is provided. It is equipped with an internal overload protection and, as an option, there are contacts provided for connecting the thermo contacts (PTO) in the motor winding.

Following to switching the unit on, the controller automatically is operating a softstart of the motor up to the speed which is set by the position of the potentiometer. By turning the potentiometer the motor speed will be changing due to driving it with a varying voltage through phase cutting.

Wiring Diagram

Star-delta switch

Enclosed selector for star-delta motor configuration for three-phase motors.

Execution

Insulated polycarbonate module, IP66 protection degree, front mounting, silver front panel, 60° switching angle, terminals accessible both from mounting direction or laterally, data rated according to IEC 60947.

Function

A 3-position changeover switch for 0 = Motor OFF, Y = STAR motor configuration, Δ = DELTA motor configuration. It must be installed between the 3-phase power supply (L1, L2, L3) and a 3-phase controllable motors, having the STAR-DELTA terminals externally available (U1, V1, W1 and U2, V2, W2 respectively). It provides a safe way to switch between the STAR and DELTA motor configurations, changing, in this way, between the high (DELTA) and low (STAR) motor speed.

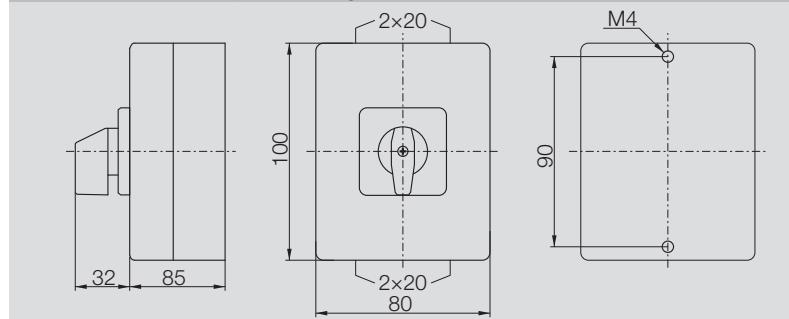

The switch can't be used as STAR/DELTA motor starter!

Wiring Diagram

Description

Safety

These fans are intended to be incorporated into finished products for the treatment of clean and filtered air, free of dust, particles, shavings, grease, etc., within the rated ranges of temperature and electrical supply.

The design of the installation shall guarantee the essential safety requirements, as specified by the locally enforceable legislation, including safety against human contact with moving parts, e.g. by application of the design principles stated in EN ISO 12100.

When the inlet and/or outlet of a fan are connected to a ducting system, or to a closed plenum, including integral filters or grids, these may be designed also to provide the specified protection level.

Otherwise, the fan must be protected by fitting appropriate inlet or outlet guards, designed in accordance with EN ISO 13857, available from Nicotra Gebhardt as accessories or options.

Type code

1F 3F	2P 4P 6P	1V 2V 3V 4V	FL	SCT	SP	SB	GRG	GRGP
Single phase Three phase	2-pole 4-pole 6-pole	1-Speed 2-Speeds 3-Speeds 4-Speeds	Outlet flange	Terminal box	Special version	Mounting Feet	Inlet guard	Outlet guard

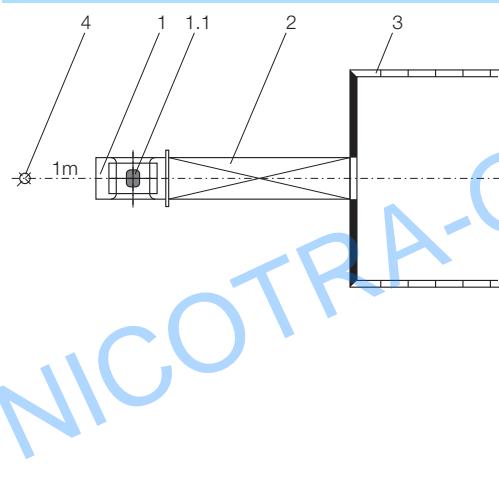

Performance data

Air performance ratings shown in this catalogue have been derived from performance tests made with installation type "B", with free inlet and ducted outlet.

The performance data shall be obtained in a laboratory registered by AMCA for AMCA 210/99 air performance testing. Data are not certified by AMCA.

Ratings are referred to the standard air density of $\rho_1 = 1.2\text{kg/m}^3$ at the fan inlet.

Sound

In the diagrams, the A-weighted housing and free inlet sound power level L_{WA7} is given as the emission parameter for the ventilator.

The A-weighted noise level L_{PA7} for a distance of 1m (see sketch) is achieved approximately in that the correction value given below is subtracted from the respective A sound power level.

It should be noted that site acoustics, duct design, reverberation, natural frequencies etc. can all influence noise to a greater or a lesser extent.

$$L_{PA7} \approx L_{WA7} - dL$$

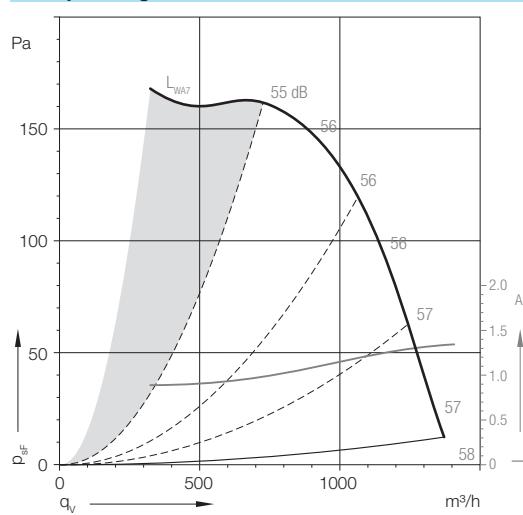

Correction values dL :

Size $\leq 10/10$: $dL = 11\text{dB}$

Size $\geq 12/9$: $dL = 13\text{dB}$

- 1 = Fan
- 1.1 = Motor
- 2 = duct on discharge
- 3 = Chamber
- 4 = Microphone position

Fan operating area

For a proper fan selection the duty point in the grey area to the left of the leftmost dashed parabolic line drawn on each performance diagram should preferably be avoided. In this area the fan stall is producing fluctuating pressure and fluctuating loads on the fan and motor; some single-phase motors may also be overheating in this low-load condition.

When the performance curves of a fan are cut to the right with continuous-line parabola, a fan selection with the duty point located below of this parabola shall be carefully avoided, because the drive motor would be overloaded and would be overheating. Such an operating condition may be evidenced by a motor input current exceeding the maximum rated value.

Description

Fan lifespan

The high level of manufacturing technology and the use of selected materials provide a considerable fan operating lifetime.
In most applications, the fan components more subjected to wear are the motor bearings.
The bearings are sized to reach, using 80% of the maximum allowed current and working at an air temperature not higher than 40°C, a L_{10h} operating life of 20,000 hours. This means a 7 years fan lifetime, for fans running 8 hours a day.

Media

This range of fans are specially designed for use into air handling units (AHU) and ventilation systems.
The centrifugal fans are ideal for conveying clean air. The allowed air temperature comes from -20°C to +40°C.

Motors

Most motors have "F" ISO insulation class but some of the smaller models have nevertheless "B" ISO insulation class.
Motors could have IP32; IP44; IP54 or IP55 protection class (closed frame) or IP10; IP20 protection class (open frame).
Detailed information for each fan model are provided with fan specification on the product pages.

Motor protection

All standard production motors are equipped with an integrated thermal overload protectors (TOP), as protection against thermal overload.
TOP may be wired internally to windings and then they'll automatically stop the motor, if a overheating event occurs, and start the motor again once it is cooled down.
TOP may alternatively be externally wired, that means TOP terminals are available to the user in the motor terminal block or terminal box.
In this case, the TOP terminals can be manually connected in series between power supply and motor windings or, alternatively, to an external device that switches off the mains to prevent that the motor be damaged by an overheating conditions.

Speed regulation generally

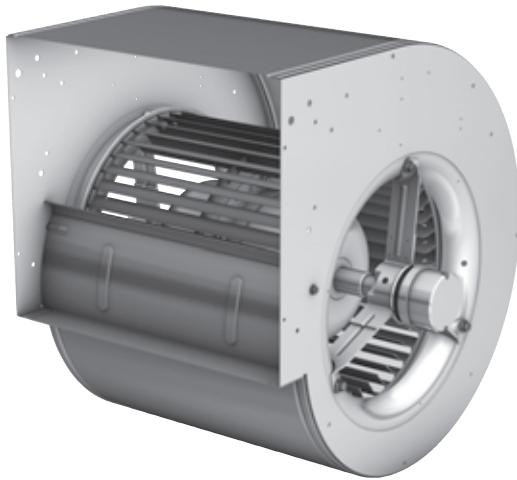

All standard production motors can always be used with transformers or devices which do not modify the sinusoidal wave line to change the fan speed is always allowed.

Speed regulation for fans equipped with single-phase motors

Single or multiple speed available. Single phase motors are generally suitable for speed regulation by changing the input voltage with our electronic single-phase RVM speed regulators (see chapter "Options/Accessories" for further information).
The speed variable types are marked with an dot in the technical data tables.
The reduced – voltage curves shown in the catalogue may be obtained by either using transformers or our RVM regulators. In the last case, we have commonly used a 2-wires connection for running currents up to 3 Ampere max and a 3-wires connection for higher running currents.
Speed regulation of multi-speed fans is obtained by connecting the mains to the correct motor terminals according to the wiring diagram supplied with each fan.

Speed regulation for fans equipped with three-phase motors

Single or double speed available. Performance diagrams of single speed fans usually shows only the curve referred to a 230V star – 400V delta configuration.
Performance diagrams of double speed fans usually shows the curves referred to a 400V star (high speed) – 400V delta (low speed) configurations.
The use of RVT controllers or inverter is only acceptable with special motors equipped with a reinforced insulation of the windings. In this case, these devices shall be in accordance with the requirements of IEC / TS 60034-17:2006.

**The high efficiency direct driven centrifugal fans DDMB,
with brushless DC external rotor motor:**

The logical continuation of the successful series DDM.

Product features

- new brushless-DC external rotor motor
- new lapjointed scroll
- high efficiency
- low power consumption
- low sound power level
- high reliability

High efficiency variable speed drive**Energie saving concept**

- high efficiency drive due to optimized motor design
- PFC disabled at Stop
- NTC bypassed during operation

General features

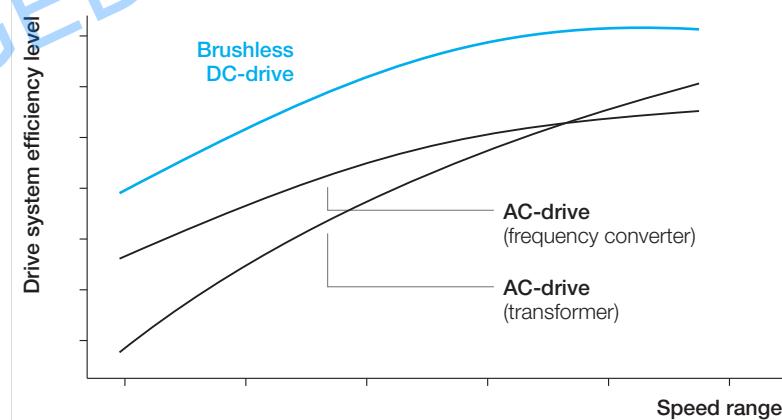

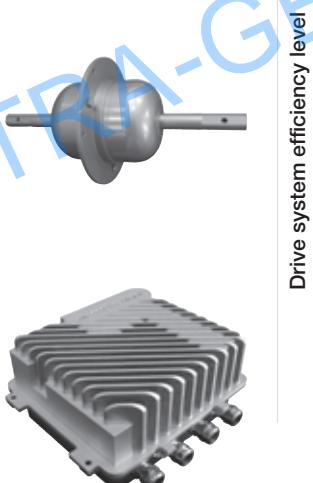

- integrated PFC
- brownout protection
- IP54 for complete drive
- dry contact - error signal
- simple usage - fan selection by DIP switches and GO! (no parameter setup)
- designed for double inlet fans
- external unit - no obstruction of intake - less aerodynamic losses

Interface

- analogue
- MODBUS RTU

Comparison of the different levels of system efficiency

Brushless DC motor has a significantly higher level of drive system (motor and control) efficiency under all operating conditions.

Program overview:

DDMB range

This kind of fans are specially conceived for use in dust-free environments, at temperatures up to +40°C, or higher on selected models. The performance data have been obtained in a laboratory registered by AMCA for AMCA 210/99 air performance testing. Data are not certified by AMCA.

Fan range DDMB

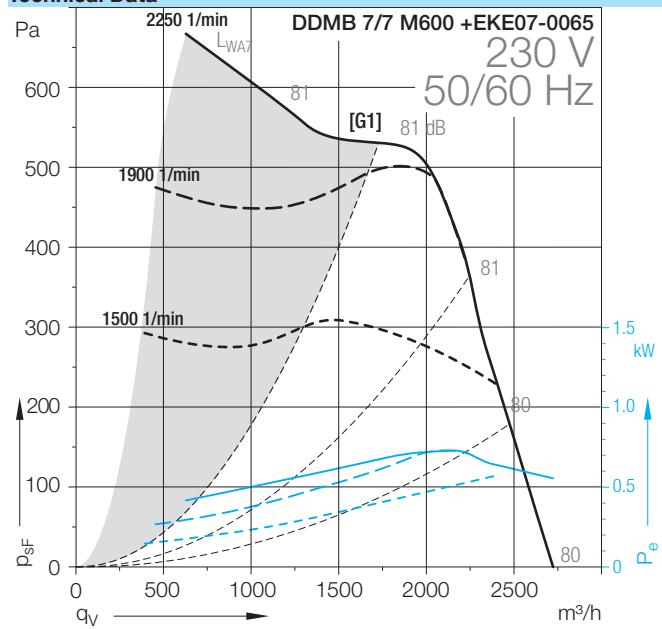

- Impeller size (width and diameter) up to 12"
- Brushless-DC external rotor motor
- High efficient variable speed drive
- External unit – no obstruction of intake
- Air flow up to 6,000m³/h
- Static pressure up to 1,500Pa

The variety of DDMB

We have the right fan for all your applications!

Many different sizes, versions and options are available in the DDMB range!

DDMB-12/12

Technical Data

The graph shows a fan curve with Pressure drop (Δp) in Pascals on the y-axis and Air volume flow rate (q_V) in m^3/h on the x-axis. The x-axis ranges from 0 to 6000 with major ticks every 1000 units. The curve starts at the origin (0,0) and rises linearly, then levels off into a horizontal asymptote at approximately $\Delta p = 10 \text{ Pa}$. A blue arrow points along the curve from left to right, indicating the direction of increasing air volume flow rate.

Specifications

High performance centrifugal fan DDMB

Double width, double inlet (DWI), direct driven forward curved blades fan. Lap-jointed scroll of galvanized steel (EN10142) assembled through a high technology roller-lock seaming (sizes ≥ 7 inches), spot-welded scroll of galvanized steel (sizes < 7 inches). Straight cut off plate at fan outlet.

Impeller with forward curved blades of galvanized steel, directly mounted on a brushless DC "External rotor" motor, optimal motor cooling and no transmission losses.

High efficient brushless DC motor with external control unit – no obstruction of intake; continuously variable speed control with integrated active PFC and brownout protection, drive system complete in protection class IP54, 50/60Hz, 0...5V/0...10V, Modbus RTU.

Maintenance free, vibration isolator pads. Impeller dynamically balanced according to ISO 1940.

Different fan sizes, options and accessories available - see technical data.

Electrical commutation unit

Electrical commutation unit

Execution

Controller EKE07 with single phase input and variable output voltage and frequency, especially designed to operate forward curved fans with brushless DC motors. By using modern power semiconductors a high efficiency at any speed is guaranteed.

Specification

- suitable exclusively for operating Nicotra Gebhardt brushless DC motors
- for single phase supply 230V/50-60Hz – input power up to 1.8kW
- internal speed-, power- and motor current limitation can be adjusted according to the connected fan type simply by dip switches
- integrated active Power Factor Correction (power factor >95%)
- Modbus RTU serial interface
- analogue interface 0...5V/0...10V
- dry error contact (max. 24V DC/250mA)
- protection class IP54 (protected against dust and splashing water)
-

Standards and guide lines

European Low Voltage Directive

The Controller EKE07 complies to the requirements of the Low Voltage Directive 2006/95/EC. The unit has been manufactured according to the standard: EN 60146-1-1 (Semiconductor converters - General requirements and line commutated converters)

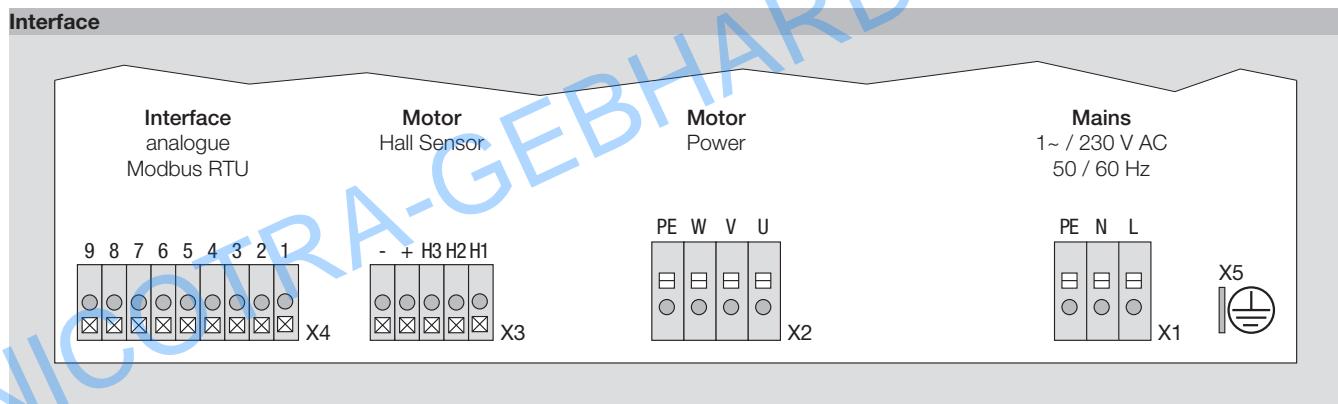

European EMC Directive

The Controller EKE07 is supplied exclusively in connection with products of the company Nicotra Gebhardt. The unit is fully integrated in the corresponding products and then complies to all requirements of the EMC directive, according to the EMC product standard for electrical drives with variable speed EN 61800-3.

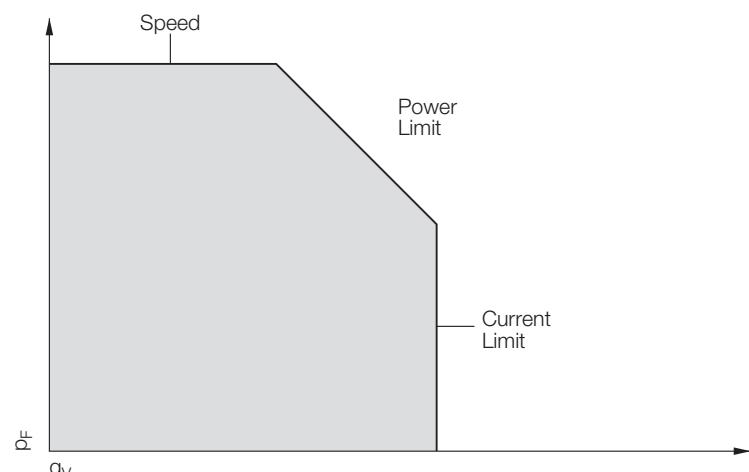

European Machinery Directive

The Controller EKE07 does not impinge on the application field of the Machinery Directive.

Interface

Performance

The exact limits depend on the fan type selected by dip switches.

Fittings / Accessories

Accessories

All options and accessories must be specified separately.

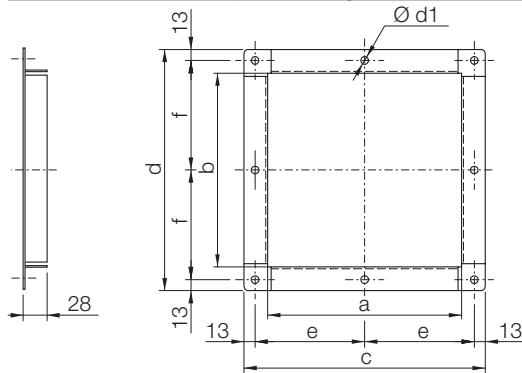

Please take the technical data and dimensions from the corresponding page of the catalogue.

Flanges

Made from galvanized or painted steel, to connect ducts and system components to the fan outlet side.

Protection guards

The fans are designed for installation in equipment and as standard are not equipped with protective guards.

They should not be put into operation before all protective devices are fitted and connected!

Protective measures must be carried out as set out in DIN EN ISO 12100 "Safety of machinery - Basic concepts, general principles for design".

If the application of the fan allows free access to the inlet and discharge apertures, safety devices must be put in place on the fan in accordance with DIN EN ISO 13857! Suitable safety guards are available as an optional extra.

Increased corrosion protection

Nicotra Gebhardt fans are provided – as a standard equipment – with a highly efficient corrosion protection but, in the event of extremely high corrosion risk, additional corrosion protections might be required.

Following to the application and corrosion stress conditions, special coatings of various types and thickness can be supplied on request.

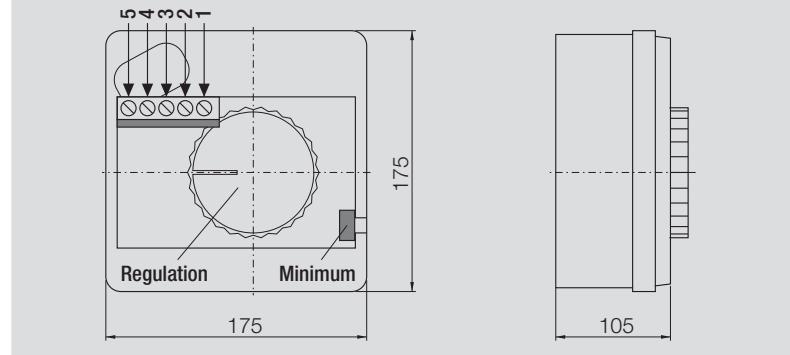

Fittings / Accessories

Speed regulator module REGPOT

REGPOT1 and REGPOT2 are devices used to give variable voltage by inside rotating. It's possible regulate minimum voltage. STOP function is implemented. REGPOT series are used to control voltage controlled electronic devices (DRIVER, Electronic motor, brushless inverter).

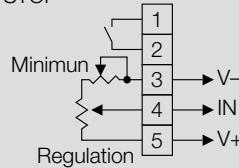

Dimensions in mm, subject to change.

Description

Safety

These fans are intended to be incorporated into finished products for the treatment of clean and filtered air, free of dust, particles, shavings, grease, etc., within the rated ranges of temperature and electrical supply.

The design of the installation shall guarantee the essential safety requirements, as specified by the locally enforceable legislation, including safety against human contact with moving parts, e.g. by application of the design principles stated in EN ISO 12100.

When the inlet and/or outlet of a fan are connected to a ducting system, or to a closed plenum, including integral filters or grids, these may be designed also to provide the specified protection level.

Otherwise, the fan must be protected by fitting appropriate inlet or outlet guards, designed in accordance with EN ISO 13857, available from Nicotra Gebhardt as accessories or options.

Type code

	1F 3F	2P 4P 6P	1V 2V 3V 4V	FL	SCT	SP	SB	GRG	GRGP
Single phase Three phase		2-pole 4-pole 6-pole	1-Speed 2-Speeds 3-Speeds 4-Speeds	Outlet flange	Terminal box	Special version	Mounting Feet	Inlet guard	Outlet guard

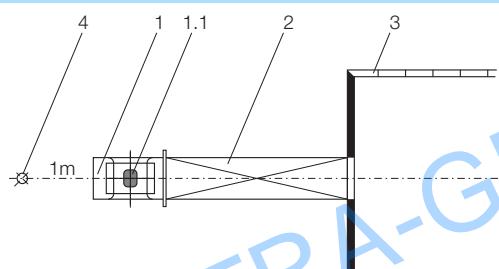

Performance data

Air performance ratings shown in this catalogue have been derived from performance tests made with installation type "B", with free inlet and ducted outlet.

The performance data shall be obtained in a laboratory registered by AMCA for AMCA 210/99 air performance testing. Data are not certified by AMCA.

Ratings are referred to the standard air density of $\rho_1 = 1.2\text{kg/m}^3$ at the fan inlet.

Sound

In the diagrams, the A-weighted housing and free inlet sound power level L_{WA7} is given as the emission parameter for the ventilator.

The A-weighted noise level L_{pA7} for a distance of 1m (see sketch) is achieved approximately in that the correction value given below is subtracted from the respective A sound power level.

It should be noted that site acoustics, duct design, reverberation, natural frequencies etc. can all influence noise to a greater or a lesser extent.

$$L_{pA7} \approx L_{WA7} - dL$$

Correction values dL:

Size $\leq 10/10$: $dL = 11\text{dB}$

Size $\geq 12/9$: $dL = 13\text{dB}$

- 1 = Fan
- 1.1 = Motor
- 2 = duct on discharge
- 3 = Chamber
- 4 = Microphone position

Motors

These brushless DC external rotor motors (BLDC) are especially designed. They have an highest efficiency also in the partial load area.

Motor protection

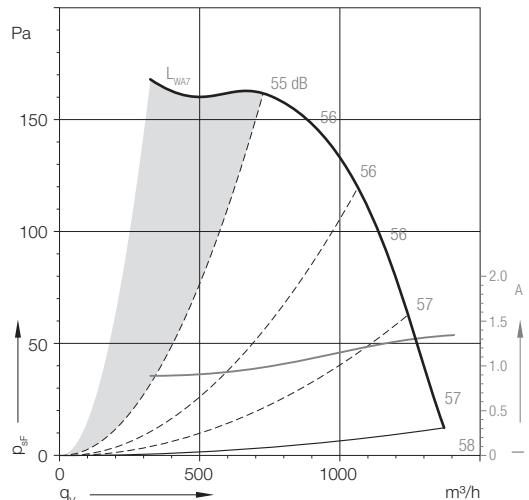

The motors are protected via safe operating area (SOA). SOA defines the conditions (voltage, power, current, speed) over which the drive can be expected to operate without self-damage. The SOA of the DDMB is automatically guaranteed by the motor design and the controller settings. Additionally to that the motors are equipped with thermo contact (PTO) to protect the motors against thermal overload.

Speed regulation

The speed limits are defined by the presetting of the dip switches and the winding configuration. Between that limits the speed can be controlled via analogue (0...5V or 0...10V) or MODBUS-interface.

Description

Fan operating area

For a proper fan selection the duty point in the grey area to the left of the leftmost dashed parabolic line drawn on each performance diagram should preferably be avoided. In this area the fan stall is producing fluctuating pressure and fluctuating loads on the fan and motor; some motors may also be overheating in this low-load condition. When the performance curves of a fan are cut to the right with continuous-line parabola, a fan selection with the duty point located below of this parabola shall be carefully avoided, because the drive motor would be overloaded and would be overheating. Such an operating condition may be evidenced by a motor input current exceeding the maximum rated value.

Fan lifespan

The high level of manufacturing technology and the use of selected materials provide a considerable fan operating lifetime. Only the motor bearings are subject to wear in most applications. The calculated bearing life time L_{10h} is appr. 30,000 hrs.

Media

This range of fans are specially designed for use into air handling units (AHU) and ventilation systems. The centrifugal fans are ideal for conveying clean air. The allowed air temperature comes from -20°C to +40°C.

Accessories

Frequency converter

Design

Frequency inverter with variable output voltage and frequency, specially designed for the operation of centrifugal fans with induction motors. Due to the use of modern power semiconductors it is possible to achieve a speed of revolution with high efficiency. Switching frequencies up to 16kHz can be set with all types. If the highest switching frequencies are required (for example for reasons of noise reduction), the maximum output current is decreased, in which case the performance category should be specially checked.

The overall package includes the frequency inverter, filter for class B (for residential and commercial uses) as well as a control unit.

General Performance characteristics

Motor protection feature for motors with thermistor temperature sensors, adjustable acceleration and deacceleration ramps, minimum and maximum rotation speeds, fixed rotation speeds, trapping switch during operation, programmable inputs and PI-controller (MM420 and MM430 only), RS485 serial interface as well as a detailed operating instructions. Caution about combination with isolators (ESH)! Special EMC-action can be necessary, furthermore do not switch during operation, overvoltages can destroy the switch and the motor-winding.

Performance range G110 1AC 230V (for single-phase AC supply)

0.25kW to 2.2kW rated motor power, 200V to 240V 10% single-phase AC, 47Hz up to 63Hz, three-phase current output 3x230V AC, protection class IP20. Permitted ambient temperature during operation: -10°C up to +40°C.

Performance range MM420 3AC 400V (for three-phase AC supply)

0.55kW to 11kW rated motor power, 380V to 480V 10% three-phase AC, 47Hz up to 63Hz, three-phase current output 3x400V AC, protection class IP20. Permitted ambient temperature during operation: -10°C up to +50°C. The interference suppression filter required to comply with the EMC basic interference suppression standard EN 50081-1 (residential and commercial uses) is integrated into the package as substructure option. Power choke to comply with EN 61000-3-2 as additional component.

Observe performance reduction when using high clock frequencies!

Performance range MM430 3AC 400V

(for three-phase AC supply)

15kW to 250kW rated motor power, 380V to 480V 10% three-phase AC, 47Hz up to 63Hz, three-phase current output 3x400V AC, protection class IP20.

Permitted ambient temperature during operation: -10°C up to +50°C. The interference suppression filter required to comply with the EMC basic interference suppression standard EN 50081-1 (industrial applications) is partially integrated. In order to attain EMC requirements Class B a frequency inverter without filter should be selected. The appropriate EMC-B filter is then required as an additional component.

Observe performance reduction when using high clock frequencies!

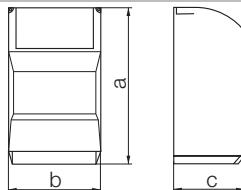

The indicated ratings of the units are made for a quick selection. The exact dedication of an inverter in this catalogue is made by taking into account of the max. admitted current at a pulse frequency of 4kHz. It is important to know that at higher pulse frequencies the supplied current of the inverter will be decreasing, with the possible consequences of having to select a larger inverter unit. Also longer feed lines or additional radio frequency filters may lead to the choice of a larger inverter size.

The selected frequency inverters (G110 und MM420) are units contains the frequency inverter (as shown in the following tables) with the matching interference suppression filter (Class B) and a control panel. A further component is the line choke which is available as an accessorie. For more information the available frequency inverters are shown in the following tables.

Motor protection unit

Motor protection unit EUM 33

Motor protection unit for three-phase current motors (standard motors) without thermal contacts.

Design

Plastic casing in protection class IP55, permissible ambient temperature +40°C, 40Hz up to 60Hz, frontal operation, for wall mounting. Motor protection unit for single-speed, non-variable speed three-phase current motors without thermal contacts.

Function

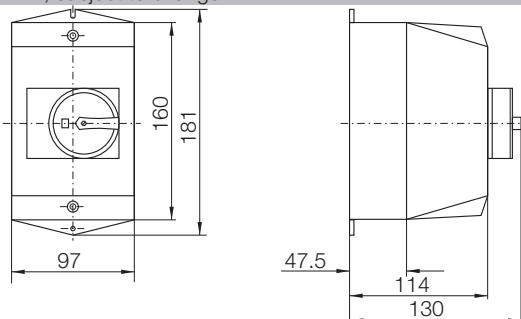

The motor protection units must be adjusted on site to the trigger current. If the preset trigger current is exceeded, the device disconnects the motor from the mains supply via a thermal overload release. Pressing the "on key" causes the unit to turn on again.

All motor protection units EUM33 are also suitable for the protection of EExe-motors (PTB-Prüfung Gesch-Nr. 3.35/386.3060). They must however be mounted outside of explosion endangered areas, since they are not themselves designed with explosion protection.

Wiring Diagram

Accessories

Universal control device

Universal control device for installation in control cabinets Digital control module for controlling pressure, air velocity or volume flow (PI controller). For example, a transformer for fans is controlled via the 0...10V output. The device is designed for installation in control cabinets.

Type

Multi functional LC-display for actual and nominal values (m/s, hPa = mbar, 100m³/h). Menuassisted adjustment via three function keys.

Actual value input 0...10V e. g. for:

- air speed sensors Type EIL in measuring ranges from 0...1m/s and 0...10m/s e. g. for Air velocity control in clean room technology
- Pressure sensors Type EIP in measurement ranges 50Pa up to 4000Pa e. g. for Pressure control in canal systems of air conditioning systems (VVS) and Flow control in centrifugal fans with pressure tappings in the inlet cone

The control module calculates the required flow (m³/h) from the differential measured pressure between the surrounding level and inlet cone.

- Output 0...10V e. g. for controlling a transformer
- Failure message is output via display (internal/external) and relay programmable
- External set value specification via potentiometer or 0...10V signal
- Specification of two set values (day/night), can be switched over externally or via keyboard
- Protection against unauthorised setting by keyboard code

Application area

- Pressure regulation for centralised ventilation systems and variable volume flow systems for building air conditioning (VVS) e.g. in combination with a frequency inverter or a commutation unit or a transformer and a pressure sensor
- Volume flow regulation for centrifugal fans (with measuring stub in the inlet cone) e.g. in combination with a frequency inverter or a commutation unit or a transformer or a mini-interface inverter and a pressure sensor and the volume flow volumeter
- Air speed regulation for clean room systems, e.g. in combination with a transformer and an air speed sensor

Electrical connection and installation

Connection to 230V, 50/60Hz. The control module can be installed in a control cabinet door. Admissible relative humidity: 85%, noncondensing. Power supply for the sensors included:

+24V, 20%, I_{max} = 70mA.

Setting options

- Set values in the measurement range of the sensor (m/s, hPa = mbar), or in the volume flow range of the fan (x100m³/h)
- Switch over of set value (day/night)
- Min./max. setting range
- Translation of performance curve (P component)
- Constant of integration can be selected (I component)
- Reversal of the effect of the control behaviour
- Rotation of the performance curve
- Switchover or programming of internal/external set value
- Sensor selection via keypad
- Programming for "Filter fault"
- Keypad code
- K factor entry (The K10-factor can be found in the current lists of our fan line)

Technical Data

	Input voltage V	Output voltage V	Max. output current mA	Motor protection class	Operating consump- tion VA	Operating temperatur °C
ERA 02-	0/10	0/10	10	IP20	10	+0/+40

Accessories

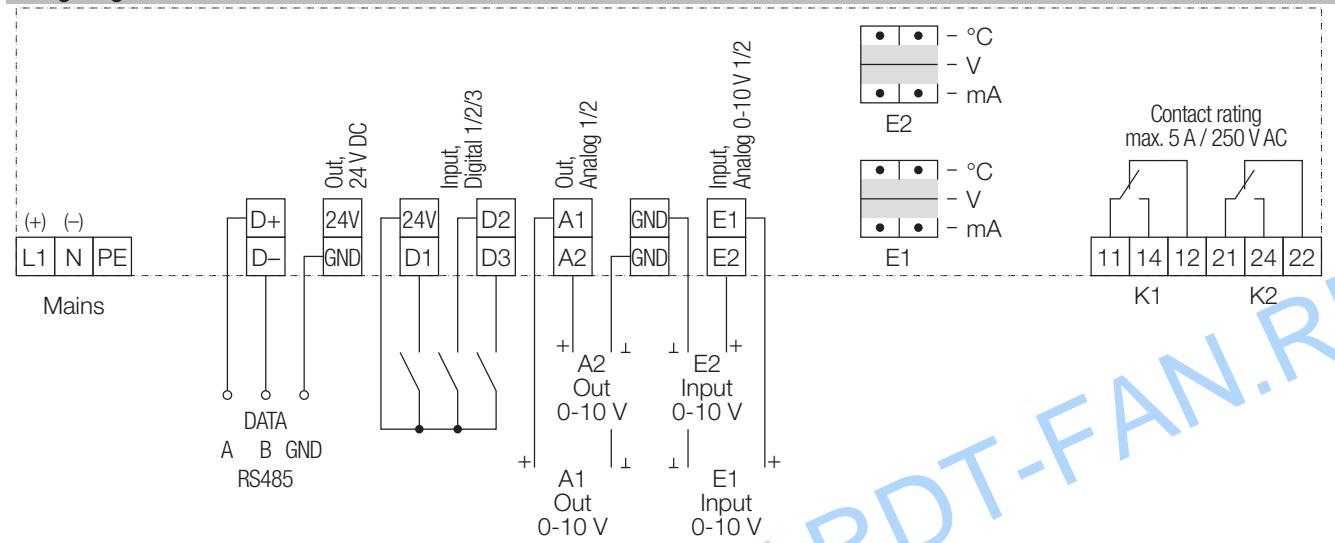

Universal control device

Dimensions in mm, subject to change.

Wiring Diagram

Differential pressure sensor

Differential pressure sensor with membrane for measuring the pressure, negative pressure or differential pressure of nonaggressive gases.

Type

The differential pressure to be measured acts transformed into an output signal of 0...10V by electronics (in SMD technology).

Application ranges

Volume flow regulators in centrifugal fans (with volume flow measuring device IMV) in connection with a frequency inverter type G110, MM420, MM430, or a universal regulator appliance type ERA 02-4000-5E in connection with a frequency regulator.

Electrical connection and installation

The differential pressure sensor delivers a starting signal (0...10V) by pressure increase at the "Plus" connection opposite pressure on the "Minus" connection.

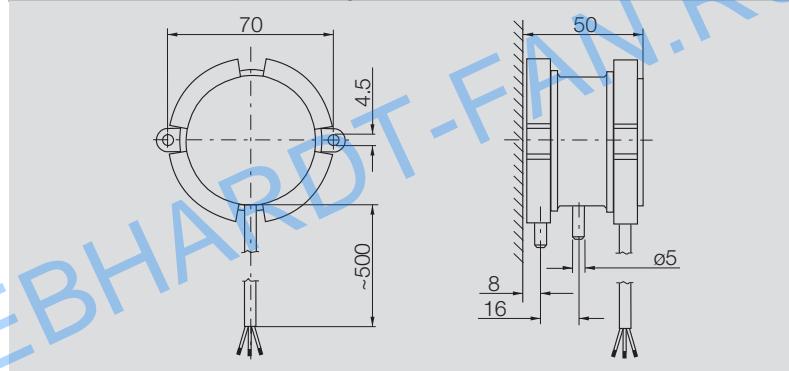

Voltage supply

- 15...30V DC or 24V AC, 15%
- Pressure connections must point downward, tube connection Ø5mm

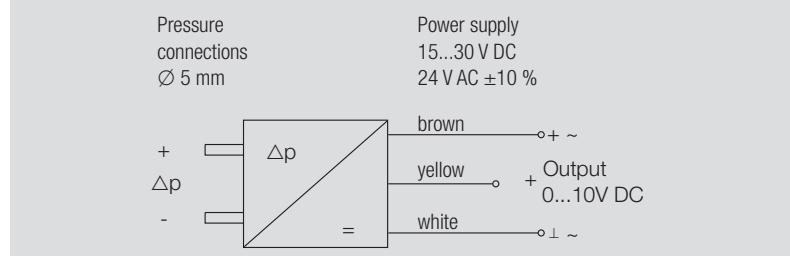

Measuring accuracy

- Null drift: 0.75%
- Sum of linearity and hysteresis: 1%
- Temperature drift zero point: 0.3%/10K
- Temperature drift length of measurement: 0.2%/10K

Dimensions in mm, subject to change.

Wiring Diagram

Accessories

Isolator ESH 21

Isolator ESH 21 (≤ 3kW)

Isolator ESH 21 (≥ 5.5kW)

Design

Beautifully shaped, shock-resistant plastic casing. Protection class IP44/IP65, for surface mounting, switching symbols 0 and I. The isolator is fitted with connection terminals that are very accessible and has a connection diagram glued in the casing.

The **ESH21 up to 3kW** is designed to IP44. It is equipped with an integrated locking mechanism.

The **ESH21 up to 5.5kW** is designed to IP65. It is equipped with a coupling cover and an integrated locking mechanism. A padlock can in some cases be fitted to the rotary switch.

Function

The isolator disconnects the fan safely from the mains in the event of cleaning, maintenance or repair work on site and thus avoids accidents due to uncontrolled activation of the unit by third parties. It is no main switch or emergency switch.

All of the classified isolators are fitted with potential-free contacts (1 closer and 1 opener).

The isolators for motors with a built-in thermal contact have on principle three supplementary auxiliary contacts, so that the pre-switched control device does not drop out during cleaning or servicing work due to motor.

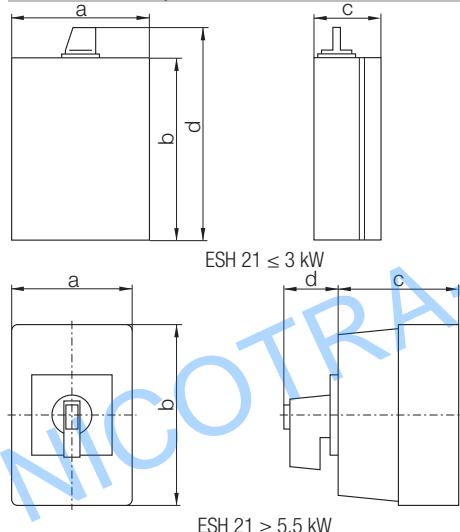

Caution about combination with frequency inverter!

Special EMC-action can be necessary, furthermore do not switch during operation, overvoltages can destroy the switch and the motor-winding.

The isolators are grouped according to motor rated power. All important characteristic data are evident from the model designation.

E.g.: **ESH 21-0030-65** = 3kW switch - 6 main contacts - 5 auxiliary contacts

Accessories

Isolator ESH 22

Design

Shock-resistant metal casing, black switch with symbols 0 and I. Protection class IP65 or IP54, for surface mounting (see determination in the tabular).

The isolator is fitted with connection terminals that are very accessible and has a connection diagram glued in the casing.

All isolators are equipped with a coupling cover and an integrated locking mechanism. In some cases a padlock can be fitted to the rotary switch.

Function

The isolator disconnects the fan safely from the mains in the event of cleaning, maintenance or repair work on site and thus avoids accidents due to uncontrolled activation of the unit by third parties. It is no main switch or emergency switch.

All of the classified isolators are fitted with potential-free contacts (1 closer and 1 opener).

The isolators for motors with a built-in thermal contact have on principle three supplementary auxiliary contacts, so that the preswitched control device does not drop out during cleaning or servicing work due to motor.

Use

The isolator ESH22 with metal casing is necessary, if screened components must be used. (e.g. frequency inverters or control engineering devices are used featuring electronic components).

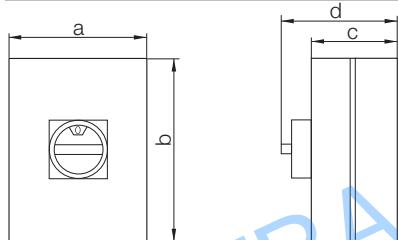

Attention!

Do not switch during operation, overvoltages can destroy the switch and the motor winding!

The isolators are grouped according to motor rated power. All important characteristic data are evident from the model designation.

E.g.: **ESH 22-0075-65** = 7.5kW switch, 6 main contacts, 5 auxiliary contacts.

Notes

Quality management system

DIN EN ISO 9001

Nicotra Gebhardt quality is the result of a continuous company policy intended to guarantee that our product properties and features are clearly superior to comparable products.

This already established company maxim led in April 1985 to the auditing and certification of the existing quality management system. In the following years it was updated to match the changing international and European standards. Modern production processes, monitored by our quality management system, guarantee a high repeat accuracy in production.

This ongoing high standard of quality permits the establishing of the performance data in classes of accuracy in accordance with DIN 24166.

The narrow tolerances ensure a high level of data reliability for our products.

Machine Safety

The fans contained in this catalogue are not machines in the sense of the EC Machine Directive. They are delivered with a manufacturer "Declaration of incorporation".

The assessment of the dangers associated with the fan and necessary safety measures are based on the VDMA Unit sheet 24167 : Fans; Safety requirements.

The operating instructions give which safety measures are still necessary on assembly to ensure that the fans comply with the Machine Directive 2006/42/EC.

Catalogue data

We reserve the right to change any measurements and technical data in this catalogue in accordance with further development of our products. All information valid at the time of printing.
