## Compact and Powerful Servo Controllers

Flexible, simple, economical

**Lenze**  
**AC Tech**

## Commitment to Price Leadership

Price leadership is serious business. It takes continuous life cycle management to make price leadership a sustainable strategy. We are always investigating techniques to improve efficiency and take advantage of the latest microprocessor and power module technology. When we achieve efficiency gains or material cost reductions, we pass those savings on to our customers. This simple philosophy has permitted us to build and maintain a very loyal customer base.

## Commitment to Quality

Design quality is meticulously managed throughout our product's life cycle. Our design engineers are continuously monitoring new technology trends that increase product performance and component reliability. We never stop thinking about process improvements through automation. In fact, we have invested millions in automating our new state-of-the-art manufacturing facility. When you open any product box you will immediately see and feel the attention to detail that goes into it.

## Commitment to Innovation

We pride ourselves on delivering products to the market that are designed to meet specific customer needs. Our broad portfolio of innovative products covers very simple variable speed applications through complex motion control. Each product is positioned so that our customers pay only for the level of technology necessary for their particular application.

## Commitment to Simplicity

One of the cornerstones of our design philosophy is to make our products simple to use. Technology only benefits the user if it can be easily understood and applied. Each product is designed to dramatically simplify installation, commissioning and operation for our customers.

## Commitment to Performance

Each Lenze/AC Tech product is in a class by itself when it comes to performance. We are not satisfied with average performance. Our products do not reach the marketplace unless they outperform our competitors and exceed our strict performance requirements. By using the most innovative components, we are able to provide that performance for a great value.

## Our Promise

At AC Tech it is not good enough to deliver part of a promise. Our products deliver the entire package: Price Leadership, Quality, Innovation, Simplicity and Performance.

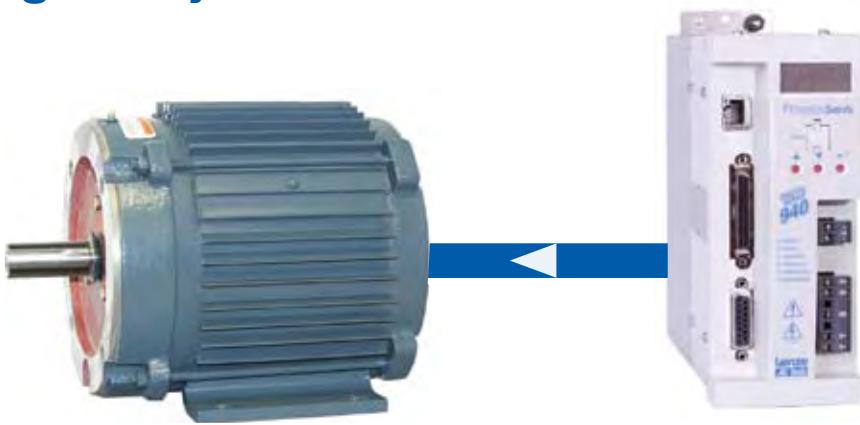

## Digital Synchronous (Brushless) Servo Motor Control

Looking to bridge that gap between sophisticated control and ease-of-use? Now you can get all of the high-end servo performance in a simple-to-use package. For centralized or decentralized servo control, look no further than the PositionServo.

## Digital Asynchronous Motor Control

Looking for more performance from your AC inverter application? Now you can have servo control for an inverter price. Pair up the PositionServo with your asynchronous motor and take advantage of the low price system, ease-of-use configuration, and high performance you get from a digital servo drive.

## PositionServo with programming capability, & even more features

### PositionServo Servo drive/controller

The PositionServo is the one drive that has it all. From basic torque control to full programmability, you choose your level of control.

As a distributed drive/controller solution, avoid all of the costly cables and connections and put the power of the motion controller in the same package as the drive.

The PositionServo can perform along with the most high-level motion controllers, but with a simple-to-use interface and clean Ethernet connection.

If a centralized control scheme is preferred; the PositionServo will outperform any torque or velocity amplifier. It is also packed with more features; all this for a better price!

Model 940: Encoder-based PositionServo (E94P)

Model 941: Resolver-based PositionServo (E94R)

### Powerful Innovation

#### When do I use the PositionServo?

- For torque, velocity and step & direction control.
  - When you are sending your drive a +/- 10V or Step & Direction signal.
- If you have a ratio following application.
  - When your axis is following an encoder signal.
- For high performing distributed control.
  - When you want a motion controller and drive in one compact package.
- If you want ONE product that can do it all!
  - The PositionServo can operate as a basic drive or a stand-alone fully programmable drive/controller.

## PositionServo Features

### Motion Control Features

- 64-bit indexing  
(incremental, absolute, registered, or segmented)
- Linear or S-Curve accel and decel
- “Real-time” Oscilloscope
- Free DLL library and program examples

### Drive Features

- Torque, velocity and position control
- Electronic gearing
- UL, cUL, CE(LVD & EMC)
- EN954-1 safety standard (optional)
- Two-year warranty

### Inputs/Outputs

- 12 Programmable digital inputs
- 5 Programmable digital outputs
- 2 Programmable analog inputs
- 1 Programmable analog output

### Communication Features

- Free MotionView software for configuration & programming
- TCP/IP Ethernet with RJ-45 connector
- Modbus TCP/IP, Ethernet IP, CANopen and RS-485 Modbus RTU (optional)

### Power Features

#### Standard Drives

- 80 – 528 VAC input
- 2 – 18 Amps continuous rms current
- 300% peak current

#### Doubler Drives

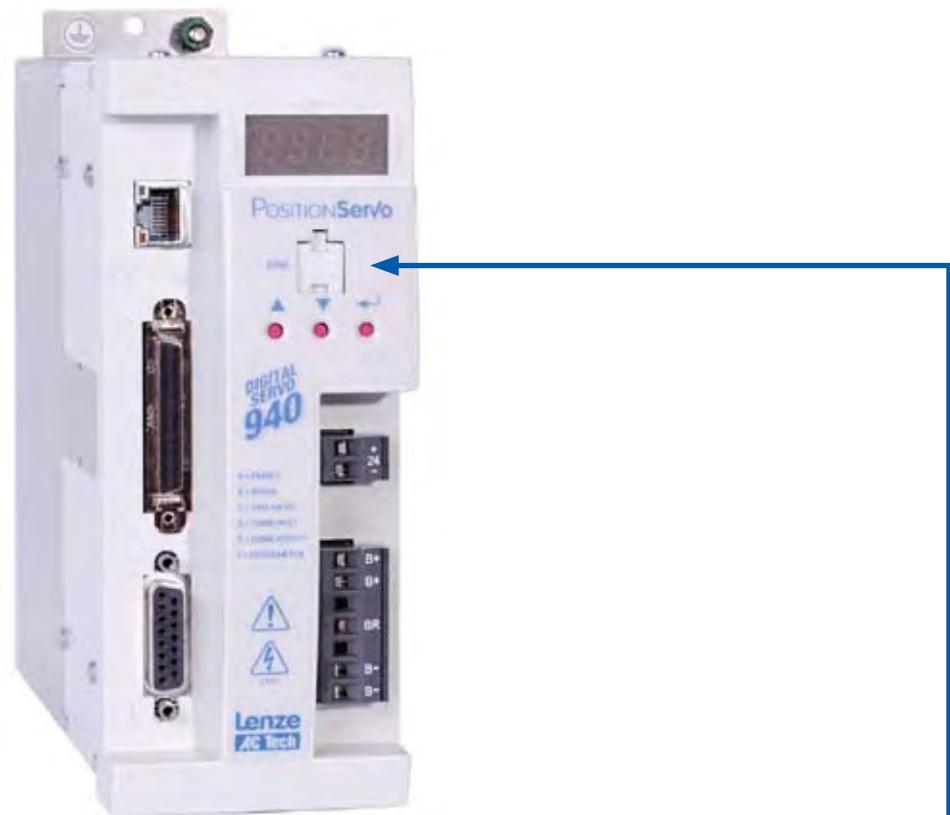

- When operating at 120VAC, Doubler Drives can run 240VAC motors at full speed.

### Feedback Options

- Integrated Encoder
- Integrated Resolver
- Optional Second Encoder Module

### Compatible Motors

- MAS, MUS, MCS and MCA Series
- Third party AC permanent magnet synchronous (brushless) and asynchronous induction motors
- Encoder or resolver feedback

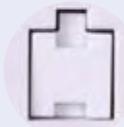

### EPM • Electronic Programming Module - Removable Memory

The EPM stores the drive's memory (programs and parameters).

The EPM saves time and money. It's as easy as 1, 2, 3...

1. Create your program and parameters in your first drive.
2. Use the EPM Programmer to make multiple copies of the EPM.
3. Insert the copied EPMS into your non-programmed drives, and they are instantly programmed.

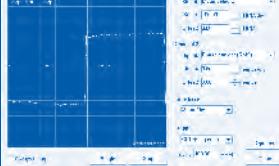

Imagine programming  
20 drives  
in less than one minute.

## Command Sets

Below is a list of the command sets.

Each command often has a sub-set of commands for program flexibility.

KEYWORD	Long Name
ASSIGN	Assign Input As Index Bit
DEFINE	Define name
DISABLE	Turns servo OFF
DO/UNTIL	Do/Until
ENABLE	Enables servo
END	END program
EVENT	Starts Event handler
ENDEVENT	END of Event handler
EVENT ON/OFF	Turn events on or off
EVENTS ON/OFF	Globally Enables/disables events
FAULT	User generated fault
GOTO	Go To
GOSUB	Go To subroutine
HALT	Halt the program execution
JUMP	Jump to label from Event handler
ICONTROL ON/OFF	Enables interface control
IF	If/Then/Else
MOVE	Move
MOVED	Move Distance
MOVEP	Move to Position
MOVEDR	Registered Distance Move
MOVEPR	Registered Position Move
MDV	Segment Move
MOTION SUSPEND	Suspend
MOTION RESUME	Resume Motion
ON FAULT/ENDFAULT	Resume Fault Handler
REGISTRATION ON	Registration On
RESUME	Resume Code Execution
RETURN	Return from subroutine
SEND/SEND TO	Send network variable(s) value
STOP MOTION [Quick]	Stop Motion
VELOCITY ON/OFF	Velocity Mode
WAIT	Wait
WHILE/ENDWHILE	While

## Command Flexibility

Every resource on the drive is accessible via a variable or flag.

For Example:

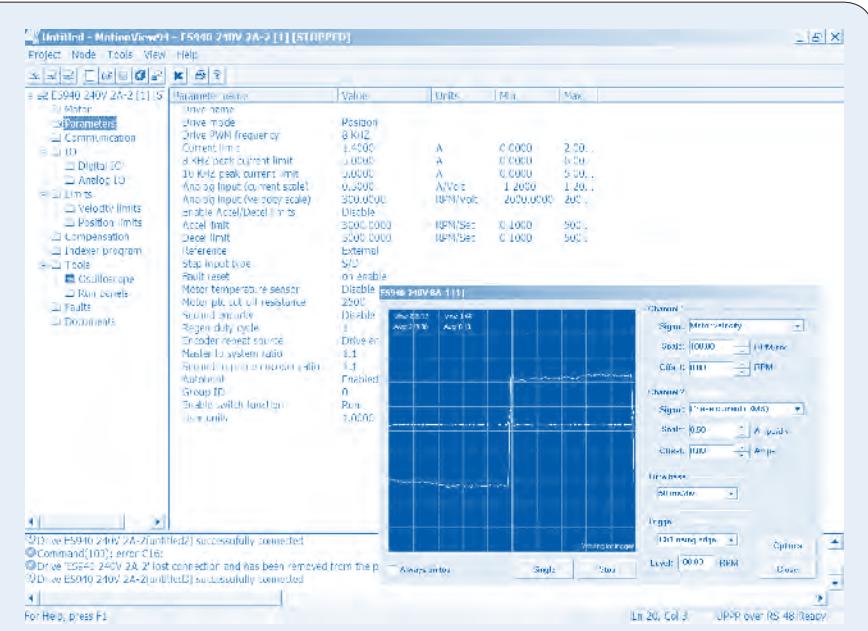

- I/O
- Current
- Position
- PID Gain Sets

## MotionView® Studio Screenshot

MotionView is an intuitive Window-based software interface that allows you to easily set up your PositionServo.

### MotionView Features:

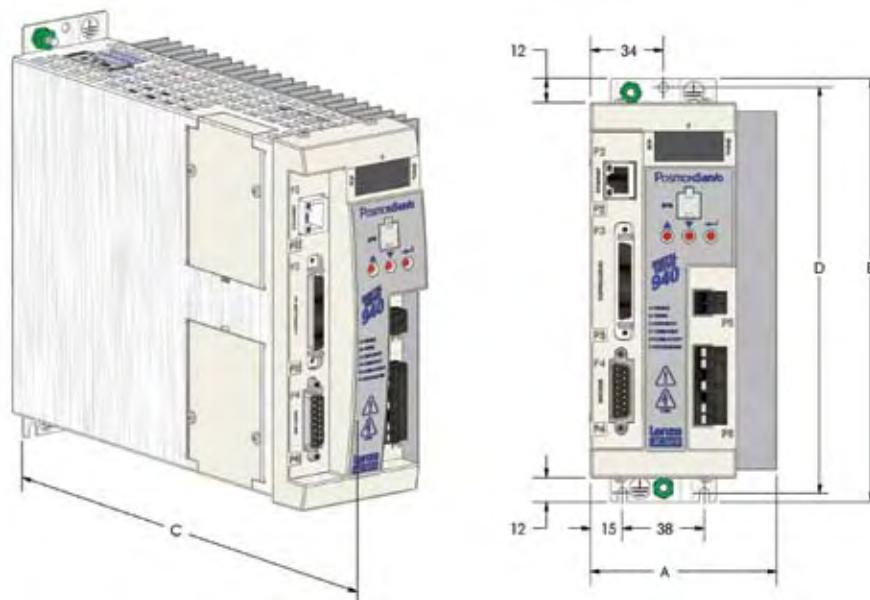

- Statement-Based language
- “Typeless” unified, 64-bit operands
- Compiled Java-style byte code execution
- BASIC-like semantic programming
- Multipass compiler
- 64-bit Arithmetic precision
- Multi-configuration real-time oscilloscope

## Brushless Servo Motors

Lenze - AC Tech offers a variety of brushless servo motors to fit your application. A variety of motors means you never have to pay for more than what you need. Use the selection chart below to get started. Each motor is paired up with the PositionServo so you can get the perfect performance.

			
	MAS	MUS	MCS
Power Range	200 W – 1 kW	380 W – 3.46 kW	250 W – 5 kW

### Don't see the exact motor you want?

The MAS, MUS and MCS motors are the premiere motors to complete your PositionServo Solution. If you are looking for a different flange or cable, adding a gearbox or brake, or just want your motor painted a certain color, please contact your local AC Tech representative for additional or custom options.

The MUS Series of motors are designed to provide optimal performance while remaining compact and cost effective. The high torque to inertia ratio allows for fast acceleration and deceleration and dynamic responses. The small package size opens up opportunities to solve dynamic applications where space constraints are a concern.

## MUS Series Features

- Synchronous AC brushless servo motors
- 38W to 3.46kW Power
- 120/240/400/480 VAC
- Metric-mounting flange  
58mm, 82mm, 105mm, 142mm
- Resolver or encoder feedback (2000 ppr pre-quad)
- UL, CE
- IP65
- Insulation: Class F
- Intercontec connectors
- 6, 8 and 10-pole versions
- Optional 24VDC brake & NEMA flanges
- Two-year warranty

## MCS Series

Low Inertia, Higher Power

The MCS Series of motors are characterized by an extremely low moment of inertia and an incredibly high overload capacity. The motors are designed for high power and demanding applications. Choose from a variety of frame sizes, feedback choices and accessories to create the system that is right for you.

### MCS Series Features

- Synchronous AC brushless servo motors
- 250W to 5kW Power
- 240/480 VAC
- IEC Metric-mounting flange  
62mm, 89mm, 116mm
- Resolver feedback  
Encoder optional (4096 PPR)
- UL, CE
- IP54
- Optional IP65
- Mil-Spec connectors
- 8-pole
- Optional 24VDC brake
- Two-year warranty

The PositionServo offers numerous accessories to complete your motion control system. The following pages describe all of the options available to you:

- Communication Modules
- Feedback Modules
- Breakout Modules
- EMC Filters
- Dynamic Braking Resistors

## Communication, Feedback and Breakout Modules

Communication Modules	
Item Number	Description
E94ZACAN1	CANopen Communication Module
E94ZARS41	RS-485 Communication Module

Feedback Modules	
Item Number	Description
E94ZAENC1	Second Encoder Feedback Module
E94ZARSV2	Resolver Feedback Module (Scalable)
E94ZARSV3	Resolver Feedback Module (Standard)

CANopen Communication Module

Breakout Modules	
Item Number	Description
E94ZAHBK2	Motor Brake Terminal Block & SCSI [F] I/O Module
E94ZATBO2	Terminal Block I/O Module
E94ZASCA2	Panel Saver SCSI [F] I/O Module

RS-485 Communication Module

## Designation Codes:

The E94ZB series of dynamic braking resistors can be used to keep the bus voltage rise below the shutdown level of the over voltage protection. Bus voltage rise may happen when a rotating load is decelerated or a load is descending vertically. In this situation, the mechanical energy stored in the load is converted back to electrical energy in the motor. This process is called regeneration.

## Dynamic Braking Resistors:

Resistor Model	R, Ohm	Rated Continuous Power on Heat Sink, Watts
E94ZB20A150A	20	150
E94ZB30A150A	30	150
E94ZB40A080A	40	80
E94ZB75A150A	75	150
E94ZBF0A080A	150	80

### Note:

- 1.) The rated continuous power with heat sink is measured when the resistor is mounted vertically on an aluminum plate (200x200x3mm) at the room temperature 25°C. Derate the continuous power for the following conditions:

Ambient Temperature	Derate the Rated Power	
	With aluminum plate (200X200X3mm)	Without aluminum plate (i.e., Free Air)
25 °C	No derating	Derate by 20%
40 °C	Derate by 5%	Derate by 25%

- 2.) The continuous power supplied to the resistor shall not exceed the continuous power rating of the resistor.
- 3.) The surface temperature can reach up to 200°C.

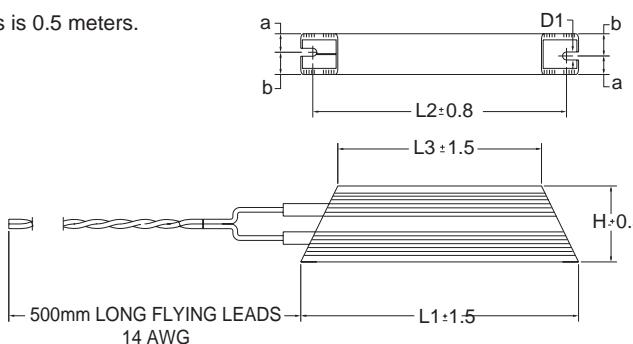

**WARNING!** Do not put any flammable material close to the resistor.

- 4.) Resistors must be vertically mounted on heat sink or metal plate for adequate cooling and safe operation.

### Dynamic Brake Resistor Dimensions:

## DEFINITIONS:

- **EMC:** Electromagnetic Compatibility: referring to:

Emissions limits: prescribed limits of radiated and line-conducted Emissions of various frequencies.

Immunity requirements: levels of disturbances, at or below which, equipment must continue to operate.

- **EN 61800-3:** 2004 - The standard for EMC requirements for adjustable speed electrical Power Drive Systems (PDS). This PDS installation includes a Drive, feeders, auxiliaries and motor, but not driven equipment. This standard applies to a drive system in lieu of others; however equipment covered by product-specific standards which contains a drive still must (also) meet the product standard.

**First Environment:** A domestic premises or an area where the AC power supply system also supplies buildings used for domestic purposes. (e.g. commercial premises in a residential building.)

**Second Environment:** Any environment where the AC power supply system has no connection to domestic premises.

**Category C1:** A PDS with rated voltage of less than 1000 volts and intended for use in the First Environment (domestic connection).

**Category C2:** A PDS which is neither plug-in, nor movable, nor with rated voltage over 1000 volts, and which, if installed in the First Environment, is intended to be installed and commissioned by a person or organization skilled in power drive systems including EMC aspects.

**Category C3:** A PDS with rated voltage of less than 1000 volts and intended for use in the Second Environment but not the First Environment.

**Category C4:** A PDS with rated voltage over 1000 volts or 400 Amps, or intended for complex systems (e.g. IT supply) in the Second Environment.

- **EN 61800-3/A11:** 2000 - Earlier revision of this standard, where above-defined Categories (without power restrictions) were equivalently defined using the terms First Environment and Second Environment in conjunction with the terms "Restricted Distribution" and "Unrestricted Distribution" as defined as follows.

Restricted Distribution: Mode of sales distribution for product to be installed and commissioned by a person or organization skilled in power drive systems including EMC aspects. (A First Environment, Restricted Distribution PDS is now in Category C2)

Unrestricted Distribution: Mode of sales where customer or user skill EMC for drives is not required.

- **EN55011** - Standard for Emissions Limits for Industrial, Scientific and Medical equipment (ISM). This is often known as a generic emissions standard, used where other specific standards do not apply. Here equipment is classified into two Groups, defined below. Each of these Groups has two Classes which correspond to the "Environment" terms defined above. These four Group-Class categories define limits of conducted and radiated emissions. Groups and Classes are as follows:

**Group 1:** Equipment in which RF energy is generated or used in otherwise providing the function of the equipment.

**Group 2:** Equipment in which RF energy is generated and/or used in the form of electromagnetic radiation for treatment of a material.

**Class B:** Same meaning as First Environment definition above (domestic connection).

**Class A:** Same meaning as Second Environment definition above.
