

TEK-BERRY®

CONCEPT

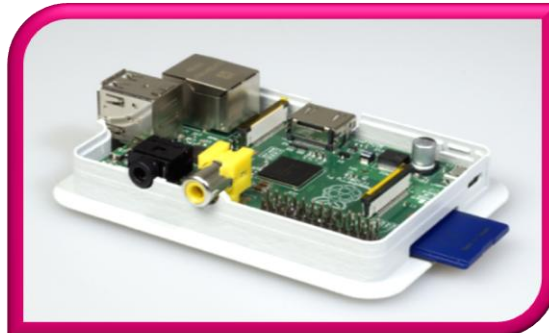

More than 50 years dedicated to the design and manufacture of standard enclosures for the Electronics have led to the creation of the first professional case specific for housing the Raspberry Pi™*.

DESIGN

The distinctive design made in Italy reveals a detailed analysis of the characteristics that the case must have to match the potential of this innovative device.

FACTS

Distinguishing mark of our case than any existing homebrews is that our project is based on a real board and not on drawings available in the world wide web. The result is a perfect assembly of the board and of all the connections.

- Perfect assembly of the board and of all the connections
- Optimized thicknesses to eliminate any aesthetic defects and ensure the protection of the electronics inside

- snap-on closing system ensures an easy and practical closing of the case
- openings for connectors are optimized for an easy and intuitive wiring connection

- Flame retardant ABS+PC (V0) to grant the maximum safety under all conditions of use
- The outer edge protects the connections with all the linked peripherals
- LED light-guide on the cover shows any time the status of the device operation

TEKO S.P.A.
