- 1.Reflow soldering should not be done more than two times. In the case of more than 24 hours passed soldering after first, LEDs will be damaged. 回流焊次数不可以超过两次，两次回流焊的时间间隔如果超过24小时，LED可能由于吸湿而损坏。
- 2.When soldering , do not put stress on the LEDs during heating 当焊接时,不要在材料受热时用力压胶体表面。

### ■ Soldering Iron 烙铁焊接

1. When soldering by hand , the temperature of iron must less than 300℃, time should less than 3 seconds.  
当手工焊接时，烙铁的温度必须小于300℃，时间不可超过3秒。
- 2.The hand solder should be done only once手工焊接只可焊接一次。

### ■ Recommend pad design 推荐焊盘 (Units: mm)

### ■ Repairing 修补

LEDs shouldn't be repaired after soldering .when need to repair the LEDs , a double-head soldering iron should be used (picture is as below).And It should be confirmed in advance if this method could damage the feature of LEDs. LED回流焊后不应该修复，当必须修复时，必须使用双头烙铁，而且事先应确认此种方式会不会损坏LED本身的特性。

### ■ Cautions 注意事项

1. The encapsulated material of the LEDs is silicone; Therefore LEDs have a soft surface on the top of package. Press on the top surface will influenced the reliability of LEDs.LED封装胶为硅胶，表面较软，用力按压胶体表面会影响LED可靠性，因此应有预防措施避免在按压器件，当使用吸嘴时，胶体表面的压力应是恰当的。
2. LEDs shouldn't be mounted on warped (non flat) portion of PCB, After soldering, do not warp the circuit board. LED灯珠不要焊接在弯曲的PCB板上，焊接之后，也不要弯折线路板。
3. After soldering ,in the process of the leds become to normal temperature,do not apply mechanical force or excess vibration, do not use any rapidly cool devices after soldering. 回流焊之后冷却过程中，不要对材料实加外力，也不要震动，回流焊后，不要采用激剧冷却的方式。

## Precaution for usage 使用注意事项

1>.LED operating environment and sulfur element composition cannot be over 100PPM in the LED mating usage material. This is provided for informational purposes only and is not a warranty or endorsement.LED工作环境及与LED适配的材料中硫元素及化合物成份不可超过100PPM.这只是一个建议，不作任何品质担保。

2>.In order to prevent external material from getting into the inside of LED, which may damage the LEDs. the single content of Bromine element requires less than 900PPM, the single content of Chlorine element requires less than 900PPM,the total content of Bromine element and Chlorine element in the external materials of the application products requires less than 1500PPM. This is provided for informational purposes only and is not a warranty or endorsement.为了防止外界物质进入LED内部以造成LED的损伤，所处环境及所用套件等等，单一的溴元素含量要求小于900PPM，单一氯元素含量要求小于900PPM，溴元素与氯元素总含量必须小于1500PPM. 这只是一个建议，不作任何品质担保。

3>VOCs (Volatile organic compounds) emitted from materials used in the construction of fixtures can penetrate silicone encapsulants of LEDs and discolor when exposed to heat and photonic energy. The result can be a significant loss of light output from the fixture. Knowledge of the properties of the materials selected to be used in the construction of fixtures can help prevent these issues. Refond advises against the use of any chemicals or materials that have been found or are suspected to have an adverse affect on device performance or reliability. To verify compatibility, Refond recommends that all chemicals and materials be tested in the specific application and environment for which they are intended to be used. Attaching LEDs, do not use adhesives that outgas organic vapor. 应用套件中的挥发性物质会渗透到LED内部，在通电产生光子及热的条件下，会导致LED变色，进而造成严重光衰，提前了解套件材料能够避免产生这些问题。瑞丰反对使用任何对LED器件的性能或者可靠性有害的物质或材料，不管这些材料是已经证实了的还是仅仅怀疑有害。针对特定的用途和使用环境，瑞丰建议对所有的物质和材料进行相容性的测试。在贴装LED时候，不要使用能产生有机挥发性气体的粘剂。

4>.Handle the component along the side surface by using forceps or appropriate tools; do not directly touch or Handle the silicone lens surface, it may damage the internal circuitry.通过使用适当的工具从材料侧面夹取，不可直接用手或尖锐金属压胶体表面，它可能会损坏内部电路。

5>. When designing the circuit, current through the LED can't exceed the absolute maximum rating. Meanwhile, it's necessary to use resistors for protection, otherwise slight voltage shift will cause big current change, it may damage the product. Design in circuit must guarantee the change in forward voltage only when t is ON or OFF. Do not put the reverse voltage to LED, or it will damage LED. 设计电路时，通过LED的电流不能超过规定的最大值，同时，还需使用保护电阻，否则，微小的电压变化将会引起较大电流变化，可能导致产品损毁。电路设计必须保证只有在开启或者关闭的时候出现正向电压的变化，不要施加反压，否则会损坏LED。

6>. LED is easy to change because of emitting heat itself and the change in environment temperature. When the temperature rises up, luminous efficiency will decrease and emitting color will be affected. So It is necessary to take heat dissipation into consideration when designing . LED容易因为自身的发热和环境的温度改变而改变，温度升高会降低LED发光效率，影响发光颜色，所以在设计时应充分考虑散热问题。

7>. Storage 儲存

Conditions 种类		Temperature 温度	Humidity 湿度	Time 时间
Storage 储存	Before Opening Aluminum Bag 拆包前	≤30℃	≤75%	Within 1 Year from Delivery Date 一年内
	After Opening Aluminum Bag 拆包后	≤30℃	≤60%	24hours 24小时
Baking 烘烤		60±5℃	-	≥24hours 大于24小时

If the moisture absorbent material (silica gel) has faded away or the LEDs have exceeded the storage time, baking treatment should be performed after unpacking and based on the following condition: (65±5)℃ for above 24 hours.

如果干燥剂或包装失效，或者产品不符合以上有效储存条件，需拆包后进行烘烤，烘烤条件: 60±5℃，大于24小时。

If the package is flatulence or damaged, please notify the sales staff to assist.

如果包装袋胀气或者破损，请通知销售人员协助处理。

8> LED is like other semiconductor , they are very sensitive to Electro-Static Discharge (ESD) and Electrical Over Stress (EOS). It's necessary to protect it.

像其他的半导体电子器件一样，LED对静电过流击穿非常敏感，需要做好防护。

9>. For other matters, please refer to our LED user manual.其它注意事项请参照瑞丰LED使用手册。
