Introduction

Established in 2012, Kaohsiung Opto-Electronics (KOE), a wholly owned subsidiary of Japan Display Inc (JDI), is a specialist display supplier committed to the development and supply of high performance displays designed for industrial and high reliability applications.

Inheriting a strong LCD heritage from Japanese manufacturers Hitachi, Toshiba and Sony, KOE is able to exploit the extensive technical resource of JDI to aid and assist efforts in display development, ensuring KOE remains at the forefront of evolving LCD technology.

Operating autonomously, KOE maintains a strong relationship and co-operation with its larger, consumer focused parent organisation that empowers technology transfer, material sourcing and manufacturing expertise.

Supplying displays manufactured with the ethos of high quality, effective design and efficient engineering, KOE has its own dedicated manufacturing and production facilities in Taiwan which supports design, development and procurement. Employing these principles has enabled KOE to continually develop and enhance an extensive range of high quality, performance optimised display solutions.

An expanding range of value added services and products such as glass bonding, projected capacitive touch, high brightness backlights, open frame monitors, and custom and semi-custom display development are supported. Strong partnerships with local suppliers endorses KOE's design engineers when sourcing display components, materials and sub-assemblies.

Global customer engagement is supported by KOE Europe, KOE Americas and KOE Asia. Each regional business focuses on sales and marketing enterprise, and supports customers with local sales teams, design focused distributors and sales representatives.

KOE: delivering Display Excellence

Kaohsiung Opto-Electronics Ltd

Evolving LCD technology

Developing cost effective display solutions, enhancing mature technology with new and compatible products, improving LCD optical design, introducing high reliability modules for industrial applications are just some of the challenges that KOE are

undertaking to continually evolve and develop LCD technology in the 21st century. KOE's established knowledge and experience of LCD design and development are enabling LCD technologies to progress and migrate to new and exciting display modules.

RUGGED+

Developed using automotive display experience, KOE's Rugged+ display modules are intended for use in demanding industrial and harsh environmental conditions. KOE Rugged+ modules are capable of providing reliable and consistent operation under the severe and rigorous conditions found in some industrial applications while still providing exceptional optical performance. The entire range of Rugged+ displays feature industrial environment operating specifications with high brightness, long-life LED backlights and will provide dependable operation between -30°C and +80°C.

Rugged+

- Strong optical performance
- Highly resistant to ESD, mechanical shock and vibration
- WTR -30°C to +80°C

Lite+

The new range of Lite+ display panels offer cost effective LCD solutions that feature industry standard screen sizes, display resolutions and data interfaces but without any compromise in display optical performance. KOE's Lite+ TFT display modules feature high brightness, long-life LED backlights and high contrast ratios to provide strong optical performance and display images that are bright, colourful and concise.

Lite+

- High brightness and contrast
- Industry standard sizes and resolutions
- Cost effective

IPS was the first LCD technology to provide exceptional colour saturation and colour stability, excellent contrast and deep black levels with a 176° wide vertical and horizontal viewing angles.

IPS has been further developed and evolved with Advanced-Super IPS, IPS Pro and most recently IPS NP (New Process). IPS NP has a much higher and more stable image performance over viewing angle than any other TFT technology. KOE will continue to develop and improve IPS technology to provide the best wide angle viewing TFT display solution.

IPS

- Cutting-edge optical performance
- Exceptional colour stability and saturation
- 176° wide viewing angle

KOE introduces Full HD TFT display for industrial applications

KOE are one of the first LCD manufacturers to introduce a compact, Full HD (1920 x 1080) display module developed specifically for industrial applications.

The TX18D200VM0EAA features a pixel pitch of 0.081mm (w) x 0.081mm (h), equivalent to 314ppi (pixels per inch), Advanced IPS, 20-pin LVDS data interface, long-life LED backlight and wide operating temperature range.

The 7.0-inch Full HD display module is the first in a series of high resolution displays to be introduced by KOE (see page 11).

RUGGED+

Rugged⁺ TFT Displays for Extreme Environmental Conditions

All of KOE's Rugged⁺ displays are designed to function in challenging and harsh environmental conditions. The entire range of Rugged⁺ displays feature industrial environment operating specifications with high brightness, long-life LED backlights and will ensure reliable operation between -30°C and +85°C.

Exceptional optical performance is ensured as many Rugged⁺ displays utilise KOE's IPS Pro technology, which

RUGGED⁺

delivers exceptional colour saturation, colour stability, contrast and black levels with a 176° wide vertical and horizontal viewing angle.

KOE's Rugged⁺ TFT displays are targeted for use in high reliability industrial, medical, marine, automotive and aerospace applications where consistent and guaranteed operation under extreme temperature, mechanical shock and vibration is a necessity.

Lite+

Lite+ TFT Displays for High Brightness

KOE's Lite+ modules offer cost effective LCD solutions that feature industry standard screen sizes, display resolutions and data interfaces but without any compromise in display optical performance. Lite+ display modules offer high brightness display characteristics and are suitable for use in high brightness environments.

Applications such as ticketing machines, point of sale terminals and public information kiosks are often found in high brightness outdoor environments. The Lite+ product line-up feature high brightness, long-life LED backlights and high contrast ratios to provide strong optical performance and display images that are clear, concise and able to be viewed under bright ambient light conditions.

KOE's Lite+ TFT displays are also suitable for medical, marine, process control, gaming and industrial applications.

Added Value Display Solutions

An expanding range of value added services and products including projected capacitive touch screens, glass bonding, analogue to digital video cards, high brightness backlights, and semi-custom and custom display development are supported.

With the addition of a touch panel through to the development of a fully integrated open frame monitor, all display solutions can be realised to aid and enhance the user experience.

Projected Capacitive Touch screens and protective cover glass

Optical bonding technology provides a platform for the implementation of projected capacitive touch screens and protective cover glass.

Projected capacitive (P-Cap) touch panel solutions can be considered for applications which require a robust user interface solution offering highly accurate and flexible gesture interactions.

Glass bonding coupled with an anti-reflection (AR) or anti-glare (AG) surface finish can enable improvements in optical performance.

A TFT display featuring a cover glass and surface coating can reduce reflections to less than 0.2% by scattering and absorbing ambient light

Analogue to digital boards

KOE's compact, embedded video driver boards enable a cost-effective and easy-to-use display enhancement.

The fully integrated analogue to digital video circuitry supports multiple interface options including VGA, DVI-D, HDMI and DisplayPort. On-board software provides on-screen display functions for backlight dimming, image scaling and optical adjustments.

'IPS Like' UWWA (Ultra Wide Viewing Angle)

KOE's ultra wide viewing angle LCD modules are based on traditional TN (twisted nematic) TFT technology with enhancements to the optical design of the LCD cell. Many embedded, medical and industrial applications demand colour homogeneity of the display image. KOE's UWWA displays enable 'IPS like' optical performance to provide stable colour uniformity over a wide viewing angle of 80 degrees in all directions (up/down, left/right).

Wide Format TFT Displays

Traditional TFT technology and the migration of IPS technology to industrial and commercial displays enables KOE to offer an expanding portfolio of wide format aspect ratio TFT display solutions. Market leading optical performance, long term availability and continuity of supply can be ensured.

Applications

Wide format TFT displays will find use in many front panel, instrument console and control system designs and applications. The mechanical footprint of the wide format TFT displays is ideally suited for human machine interface applications. Information, data and graphics can be concisely represented and displayed.

TX13D06VM2BAA

- 5.0" WVGA 800 x 480
- 1000 cd/m²
- 50K hour LED backlight

TX20D200VM5BAA

- 7.0" WVGA 800 x 480
- IPS Like
- 70K hour LED backlight

TX18D204VM0BAA

- 7.0" FHD 1920 x 1080
- IPS
- 24-bit I/F

TX38D25VM0CAA

- 14.9" HSXGA 1280 x 242
- IPS NP
- 70K hour LED backlight

Applications

- passenger infotainment terminals
- building management systems
- measurement and monitoring
- industrial control
- instrumentation
- automotive
- marine

Standard Format TFT Displays

As a proven TFT technology leader KOE has been a major developer and manufacturer of colour TFT displays for almost 20 years. A wide range of standard colour TFTs from 3.5" to 15" provide inherent quality and exceptional optical performance. Specifications and interfaces are optimised for industrial markets and ease of integration.

Applications

A vast and wide range of applications are particularly suited to the use of KOE colour TFT displays. Small, low power displays are particularly suitable for compact, portable, battery powered equipment, media players and mobile navigation systems. Medium size colour TFTs provide ideal choices for security monitoring, portable terminals and process control while larger sizes are particularly suited for online terminals, monitors and epos applications.

Applications

- navigation systems
- portable terminals
- home automation
- security systems
- online terminals
- process control
- feature phones
- media players
- epos

Standard Format TFT Displays

Standard Industrial STN Products

QVGA STN Displays

KOE's QVGA product families have been designed, developed and manufactured for over 20 years. Now a de-facto industry standard the KOE QVGA product line up is comprehensive and varied. Continuous and ongoing product enhancement ensures full backward compatibility, improved optical performance and reduced power requirements. KOE is also in the enviable position of being able to supply monochrome STN, colour STN and colour TFT displays with the same mechanical footprint.

Applications

Products and applications can be designed and developed with the knowledge and confidence that a KOE QVGA display will be available for the entire product lifetime. An extensive product family providing exceptional optical performance ensure a wide range of varied applications can use a KOE QVGA display solution.

SP12Q01L6ALZZ

- 4.7" QVGA 320 x 240
- Monochrome STN
- White LED backlight
- 'Compact' mechanical footprint

SP14Q003-A

- 5.7" QVGA 320 x 240
- Blue mode STN
- White LED backlight
- 'Classic' mechanical footprint
- Mechanically compatible with 5.7" 'Classic' TFT range

SP14Q006

- 5.7" QVGA 320 x 240
- Monochrome STN
- White LED backlight
- 'Classic' mechanical footprint
- Mechanically compatible with 5.7" 'Classic' TFT range

Applications

- industrial process control
- measurement equipment
- building automation
- domestic appliance
- epos

QVGA STN Displays

Size	Resolution	Part Number	Technology	Mode	Dimensions	Backlight	Touchscreen Version	Brightness cd/m²	Contrast	Features

5.7"	320 x 240	SP14Q006	Black/White Film STN	Transmissive	167 x 109 x 10	LED	SP14Q006-ZZA	150	25:1	40Khrs White LED, WTR
5.7"	320 x 240	SP14Q006-T	Black/White Film STN	Transflective	167 x 109 x 10	LED	SP14Q006-TZA	60	5:1	White LED, Sunlight readable, WTR

Standard STN Displays

KOE's LCD heritage has been established on the foundations of providing displays that provide high quality, exceptional reliability and longevity. These traditional values are as true today as they were 35 years ago when the first STN displays were designed and manufactured. Today, KOE STN LCDs provide simple, easy to use and cost effective display solutions.

Applications

The KOE range of standard STN displays is effective and simple to use. Simple graphical user interfaces for instrumentation, process control, security systems and measurement equipment can be designed and implemented. Some displays feature integrated display controllers and memory which allow 8-bit microcontrollers to be used to enable cost effective user interfaces and systems to be designed.

SP12N01L6ALCZ

- 4.8" 256 x 64
- Monochrome STN
- Integrated display controller

SP14N01L6VLCZ

- 5.1" 240 x 128
- White LED backlight
- DC/DC converter on board
- Integrated display controller

SP24V01L0ALZZ

- 9.4" VGA 640 x 480
- Monochrome STN
- White LED backlight
- Industry standard footprint

Applications

- graphical user interface
- information terminals
- ticketing systems
- security systems
- instrumentation
- process control
- data loggers
- front panels
- epos

Standard STN Displays

Enhanced and versatile STN capability

KOE can offer a highly flexible approach to STN display module customisation. This service affords the application designer greater scope for product differentiation. Whether the requirement is for a simple character or segment display or a more complex graphics display module, KOE is able to design, develop and manufacture bespoke display solutions.
